THE

RAILROAD RECORD,

AND

Journal of Commerce, Banking, Manufactures, and Statistics.

EDITED BY

E. D. MANSFIELD, ESQ.,
W. WRIGHTSON AND J. A. JAMES.

VOL. II.

CINCINNATI:
T. WRIGHTSON & CO., PRINTERS AND PUBLISHERS,
167 Walnut Street,
1854–5.

RAILROAD RECORD

INDEX TO VOLUME II.

A break neck railroad argument..... 829
Accumulation of specie in U. S..... 549
Adirondack Iron ores,..... 649
Aerostatics,..... 53
Aid to Railroads..... 135
Air Line Railroad,..... 229
Alabama Internal Improvements,..... 52
Alabama and Tennessee Railroad,.....3,616, 633
Alabama and Florida Railroad,.....553, 729, 164
Alarm water guage,..... 214
Albany lumber market.....669 812
Alton and Chicago Railroad,..... 58
Alton Extension Railroad,..... 7
Alton and Terre Haute Railroad, 293, 326, 355, 592, 728
Aluminium,..... 65
American woods for machines,..... 842
American Railroad Journal, Correction,.....17, 66, 798
American Hardware,..... 409
American iron for railroads..... 356
American and Foreign railroad iron,.....569, 582, 599
Another new railroad in Illinois..... 83
Annual report of the engineer of the Philadelphia Gas Works,..... 117
Another new railroad project,.....131, 197
Anthracite coal for Locomotives,..... 261
Anthracite coal in Ireland,..... 602
Anthracite coal trade of U. S..... 794
Apparatus for preserving telegraph wires,..... 698
Artesian wells.....492, 713
Ashtabula and New Lisbon Railroad,.....179, 342, 371
Ash's improved Horse power Rock Drill,..... 183
Ashley River Bridge, Charleston, S. C..... 356
Assyrian Discoveries,..... 618
Astonishing Developments,..... 586
Atlantic and Mississippi Railroad,..... 519
Atlantic and Pacific R. R. 262, 307, 372, 386. 404, 781
Atlantic, Tennessee and Ohio R. R.....550, 797
Atmospheric Trip Hammer,..... 634
Aurora Extension R. R..... 244
Australia,..... 858
Baltimore and Ohio Railroad,..... 39, 55, 99, 135, 230, 278, 549, 567, 585. 586, 631, 714, 729, 743, 776
Baltimore & Philadelphia R. R..... 374
Banking. The test of the times,..... 773
Bank Law in Connecticut..... 356
Bank capital of cities..... 245, 388
Batavia, Perintown and Milford R. R..... 244
Berwick's Bay R. R..... 258
Belleville and Murphysboro R. R..... 118, 230
Bellville and Illinoistown R. R..... 521, 711
Binghampton R. R..... 260
Birkenhead,..... 730
Black band Iron,..... 486, 552, 630
Blossburg R. R..... 371
Blue Ridge R. R..... 371, 489, 648, 697
Boston and Albany R. R..... 326
Boring tool with horizontal face plate, an American machine..... 839
Bridge over Mississippi, at Rock Island,..... 84, 402
Bridge across Hudson at Albany, N. Y..... 84
Bridge of great span for R. R. 211, 244
Breckenridge Coal—Gas..... 209
Bricks, new style..... 422, 664
Brownsville and Rio Grande R. R. Texas..... 441
Broughs' Road,..... 150, 182
Buffalo and Brantford R. R..... 245
Buffalo and Pittsburg R. R..... 550
Buffalo and State Line R. R..... 326
Buffalo and New York City R. R..... 372, 438, 538
Bureau Valley R. R..... 148
Burlington and Missouri R. R. Iowa..... 86, 101
Business of the South western R. R. the Columbus and other connections..... 149
Cairo & Fulton R. R., Arkansas, 228, 553, 599, 663, 761
Cairo & Fulton R. R. in Missouri..... 118, 390
California & Oregon, New Emigrant Route via Minnesota..... 103
Caloric Ship Ericcson..... 182
Camden and Amboy R. R. New Jersey..... 39
Cannel Coal..... 749
Carlinsville..... 813
Car Ventilator and Heater..... 357
Catawissa, Williamsport and Philadelphia.... 567, 568
Cattle for California..... 87
Census of Arkansas..... 661
Census of Rock Island..... 634
Central Military Track R. R 294, 617, 522, 727
Central Ohio R. R..... 131, 275, 405, 535, 567. 585, 617, 646, 681, 726.
Centre of Population, of Commerce, and of Locomotion..... 49
Champlain & St. Lawrence R. R..... 813
Charleston & Savannah R. R..... 5, 55, 229, 358, 824
Chartiers Valley R. R..... 668
Chattanooga & Cleveland R. R..... 341, 585
Chemical Filtration of Water..... 685
Chicago & Decatur R. R..... 440
Chicago & Milwaukie R. R..... 246, 714, 762
Chicago & Miss. R. R..... 292, 357, 388, 617, 744
Chicago & Rock Island R. R.. 7, 246, 292, 326. 342, 745
Chinese Engineering Skill..... 568
Cincinnati, Aberdeen & Ohio River R. R..... 134
Cin. & Chicago R. R..... 151, 566, 682, 710, 760
Cin. & Cleveland Short Line R. R..... 135
Cin. & Covington Bridge Co..... 405
Cin., Cumberland Gap & Charleston R. R.. 4, 213, 518
Cin. & Dayton Short Line R. R..... 55
Cin. & Fort Wayne, and Four Mile Valley R. R.... 34
Cin., Hamilton & Dayton R. R.... 39, 86, 153, 194, 309, 402.....
Cin., Harrison & Ind. R. R..... 390
Cin., Lebanon & Xenia R. R..... 244, 697
Cin., Logansport & Chicago R. R..... 147, 355
Cincinnati & Louisville Packets..... 51
Cin. & Mackinaw R. R..... 685
Cin., Peru & Chicago R. R..... 103, 258, 275, 653, 582
Cin. & Portsmouth R. R..... 617
Cin., Union & Fort Wayne R. R..... 118, 775
Cin., Wilmington & Zanesville R. R..... 69, 119, 214, 245, 406, 712.....
Coal Trade of Pomeroy..... 339
City of Memphis, and the Memphis & Ohio and Mississippi & Tennessee R. R..... 119
City Railroad..... 70
City Railroad Stock..... 2, 293
Cleveland, Columbus & Cincinnati R. R., Third Report..... 98, 323, 605
Cleveland & Erie R. R..... 115
Cleveland & Louisville R. R..... 55. 199, 241
Cleveland, Madison & Louisville R. R..... 83
Cleveland, Medina & Tuscarawas R. R... 199, 488, 712, 792.....
Clevelaod, Painsville & Ashtabula R. R..... 403
Cleveland & Pittsburgh R. R..... 51, 696
Cleveland & Pittsburgh and Ohio & Pennsylvania Railroad..... 132, 243
Cleveland & St. Louis Straight Line..... 119, 131, 486
Cleveland & Toledo R. R..... 325, 490
Cleveland, Zanesville & Cincinnati R. R..... 198
Clinton Line Railroad, and Clinton Line Extension 18, 230, 261
Coal Consumption in Ohio..... 1, 534
Coal Fields of Arkansas and New Orleans..... 810
Coal in Missouri..... 6
Coal Trade of Pomeroy,..... 339
Cobourg & Peterboro R. R..... 791
Coining Gold,..... 310
Columbia & Hamburg R. R..... 245, 358
Columbus, Piqua & Indiana R. R..... 5, 55, 101, 586
Columbus & Xenia R. R..... 58
Commercial and Economic View of a Railroad to the Pacific..... 664
Commerce of Cincinnati & Louisville. 5, 17
Commerce of the Crimea..... 714
Comparative Cost of Wooden and Iron Ships..... 135
Comparative safety of English and American R. R.. 842
Composition Castings..... 520
Contractor's Machines..... 792
Copper Business in England..... 618
Copper Mining in East Tennessee..... 746
Cost and Consumption of Gas in the U. S..... 388
Cost of Various Railroads..... 403
Cotton Seed Oil..... 26
Covington & Lexiogton R. R..... 55, 67, 103, 198, 246, 517, 729.....
Covington & Ohio R. R..... 3, 132
Covington Locomotive, Trip to Boyd's..... 146
Counterfeiting Bank Notes..... 292
Counterfeit Quarters..... 566
Crawfordsv'le, Frankfort, Kokomo & Ft. Wayne R.R 259
Credit, Fair play..... 198
Crops of 1854..... 599
Crossing the Blue Ridge..... 602
Curious Application of the Daguerreotype Art..... 823
Dalton & Jacksonville R. R..... 310
Damages against a Railroad, ... 194
Danville & Knoxville R. R..... 195
Dayton, Xenia & Belpre R. R..... 199, 307
Dayton & Michigan R. R..... 167, 278. 289, 406, 422
Dayton & Cincinnati Short Line, Second Report, 99 390. 560 .....
Dayton, Blanchester & Maysville R. R., ... 2, 42
Dayton, Western & Greenville & Miami R. R., 42, 245
Dayton O.,..... 822
Dead Heads,..... 570
Defalcations and Frauds in Wall Street,..... 340
Delaware R. R..... 358, 727
Depot Buildings at Decatur, ... 633
Depression of Railroad Stocks,..... 385, 694
Developments of the Times,..... 806
Directors, Engineers and Contractors,..... 240
Discovery of Saline Water, Saline County, Ill.,..... 746
Discovery of Railroad Depredations in Ohio..... 573
Discoveries in Metals,..... 669
Divided Car Axle,..... 405
Doings at Washington, ... 326
Doings of Congress, Public Lands, ... 71
Dubuque & Minnesota R. R.,..... 409
Eastern and Western Through Connection,..... 6
East Tennessee & Virginia R. R 5, 726

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

☞ An accident occurred on the Louisville and Frankfort Railroad, on the 28th ult., by which the down freight train was thrown off the track, and six or eight cars demolished.

COAL CONSUMPTION IN OHIO---COAL RAILROADS---FUTURE SUPPLY.

In the utilities and comforts of civilization there are few elements surpassing coal in value. As society advances, land is too valuable to maintain woods, unless wood is at a price which makes it a heavy burden on the income of families, and almost inaccessible to the poor. Besides this, coal is an essential element in many manufactories, which are of the highest importance. Coal, in fine, is one of the wants of civilization; and one of the means of national strength. With this fact before us, it is evident that coal in the United States is to be one of the great sources of its wealth and power; especially is this the case in the Valley of the Ohio, where coal is accessible at every point, and where it is entirely inexhaustible. A country must advance however, some generations before the full value of coal is understood. It is only within twenty years, that Pennsylvania has begun to open her immense coal veins, and now she digs *one hundred and fifty millions of bushels per annum!* Ohio had been a State forty years, young as she is, before coal begun to be sought for, in any considerable amount. But, in the last ten years, the increase in the consumption of coal has been very decided. It is now just beginning to be an important business. We believe that in the next ten years, the consumption of coal in Ohio, will be increased at least ten fold. If so then it is an interesting matter of investigation, and will become important both to consumers and carriers. In Ohio there are *six* railways which will be engaged, more or less, in coal carrying, viz:

The Cleveland, Akron and Zanesville;
The Central Ohio;
The Cin'ti, Wilmington and Zanesville;
The Marietta and Cincinnati;
The Hillsborough and Cincinnati;
The Scioto and Hocking Valley.

there are others that will carry for distribution in connection with these, in which the Dayton, Xenia and Belpre, and the Mansfield and Sandusky are two. In a short time coal will be consumed everywhere in the West, and must, therefore, constitute a large item in railway transportation. By way of showing the *beginnings* of the business, we will give the increase of consumption at various points in Ohio, during the last ten years—near enough for general purposes:

	In 1843. *bushels.*	In 1848. *bushels.*	In 1853. *bushels.*
Cincinnati	2,000,000	3,000,000	6,000,000
Dayton	30,261	89,273	115,617
Columbus	64,185	293,696	812,717
Chillicothe	30,485	223,153	255,415
Circleville	22,532	73,715	150,046
Cleveland	387,834	1,959,240	4,969,174
Middletown	8,334	45,815	22,838
McConnelsville	8,856	33,696	55,197
Piqua	1,420	6,088	6,718
Hamilton	——	59,793	49,619
Harmar	——	15,750	21,360
Maumee	——	——	16,000
Delphos	——	——	7,810
Total	2,553,907	6,680,189	12,474,611

There are several other towns which consume coal, but it is quite clear from this statement, that the consumption of coal increases at the rate of 100 per cent. each five years. This would only make four fold in ten years; but there are three new circumstances to be taken into view; *first*, that it is only now, that the supply of wood in the principal towns has begun to be seriously deficient, and consequently the price very high. For example, wood of a good quality, delivered at the door, is $6 per cord in Cincinnati. *Secondly*, the railways are penetrating the interior in every direction, so that towns that before could not get coal will now use it altogether. And *thirdly*, with the facility of getting coal at a reasonable price, comes the increase of manufacture, and the consequent increase of consumption. The three towns of Columbus, Chillicothe and Circleville, now consume annually twelve hundred thousand bushels of coal; but should they become manufactories (as they will,) they will consume five millions of bushels.

On the above table it should be remembered that Cleveland is a *distributing* point for the Lake Shore, so that the amount arrived there is greater than her consumption; but it is consumed elsewhere in the state.

Let us now look to the places *within this State*, which furnish the supply. The two amounts will not correspond, because we receive a great deal from Pittsburgh, and because, (on the other hand) a great deal mined at Pomeroy, is sold to steamboats, or shipped to points below Cincinnati. The following table will show nearly the amount *mined* in this State:

	bushels.
Pomeroy Mines, Meigs Co.	5,000,000
Nelsonville, Athens Co.	1,259,229
Roscoe, Coshocton Co.	340,684
Canal Dover, Tuscarawas Co.	300,058
Massillon, Stark Co.	187,345
Akron, Summit Co.	3,702,711
Furnaces in Lawrence, Gallia, Vinton, Athens	2,000,000
Aggregate	12,790,027

This is by no means the whole amount of coal mined in Ohio, It is mined largely in Belmont, Jefferson, and Monroe counties; but of these mines we have no definite information. It is mined largely for private use in Jackson, Licking, Muskingum and some other counties. On the whole, we should place the present production of coal in Ohio, at *sixteen millions of bushels*. Of this, we think, at least 50 per cent. is consumed in manufacturing operations, of which the furnaces, rolling mills, founderies, machine shops, etc., take the largest part. 10 per cent. is consumed by steamboats; so that of the coal mined, only about 40 per cent. goes into household use. It is plain enough that this state of things is to be rapidly changed. The railways will carry coal into the interior towns, so easily and cheaply, that coal will everywhere be substituted for wood. Columbus now takes 800,000 bushels of coal. At this rate the Miami country will require 20,000,000 bushels immediately, and we undertake to say, that as soon as the machinery of transportation gets fairly under way, that amount will be required and taken.

We have seen a paragraph somewhere that coal had been found in the upper Miami country. This is a mistake, and people should set themselves at rest about it. The *western* edge of the coal field is 20 miles beyond the Scioto, and between the line of the Scioto and Central Indiana there is no human probability that coal will ever be found; and while we can get unlimited quantities of coal so cheap, and convenient by railway and by river, we should be contented with our fertile lands, whose exhaustless crops will ever render it better for the manufacturer to come to us, than to any other place. Had we not coal and iron, near and cheap, we might dread competition even with abundant food; but while we have all these we may defy the competition of the world. The eagles gather where the carcass is; and where there are both food and facilities for the laborer, there he will go for there he finds it profitable to be.

DAYTON, BLANCHESTER AND MAYSVILLE RAILROAD COMPANY.—On the 17th ult., the Stockholders of the Dayton, Blanchester and Maysville Railroad Co, organized by the election of the following gentlemen as a Board of Directors: W. H. Baldwin, S. R. Oliver, J. L. Carnahan, B. B. Getzendanner, H. Page, B. Baldwin and B. Robinson. The Board of Directors subsequently elected W. H. Baldwin, Esq., President of the Company, and V. B. Horton Esq., Secretary.

OURSELF.

The present number of the *Record* commences the second volume, and affords the public an opportunity of subscribing for a full volume.

Of the *Record*, and its course we said a few words in the last issue. We now only add that we shall endeavor to merit a continuance of the favors of our friends, and the public generally, by putting them in possession of reliable information upon all subjects coming within the range of such a journal.

We have a very small number of complete copies of the first volume of the *Record*, handsomely bound, which we can supply to our subscribers as long as the supply holds out. We can also supply the back numbers, with two or three exceptions only, to such as may desire to complete their sets. In either case, an early application will be necessary.

HANNIBAL AND ST. JOSEPH RAILROAD.

We are indebted to the politeness of Mr. Dowling, Secretary of this Company, for copies of the charter and Engineer's report of the survey of this road, from which we learn that the line is divided into four divisions, viz:

First, Eastwardly from St. Joseph	25 miles.
Second, thence to Medicine Creek	59.2 "
Third, thence to Palmyra	106.2 "
Fourth, thence to Hannibal	11.4 "
Total	202.4 "

The maximum rate of grade is 50 feet per mile; the minimum radius of curvature 1,910 feet.

Accompanying the report are tables of estimates of cost of construction, working, etc., etc., of which the following is a summary, viz:

Total estimated cost, fully equipped,	$4,066,624
" Contract Cost	4,655,200
Per mile estimated cost	20,092
" Contract Cost	23.000
Requisite income to pay 6 per cent. on estimated cost	748,497

This road is one of the lines reaching westward towards the Pacific. It occupies a prominent position, having a due east and west direction on the same parallel with the great divide between the Lakes and the Ohio River, and will require only about two degress northing to approach the South Pass, in a distance of a thousand miles. To perfect the Eastern, direct, connection between Hannibal and the Atlantic, there is only necessary the construction of a road 35 miles long, from a point in Illinois, opposite Hannibal, to Naples. From Naples a direct line is already under construction either to Indianapolis and Cincinnati, or to Fort Wayne, Toledo, Cleveland, &c.

The energetic Company have already laid out a town in Illinois, opposite Hannibal, for the purpose of meeting the "State Policy" views of the Legislature, and have called it "Douglass," in honor of the "Little Giant"—a bad selection of a name we fear just now. Application will be renewed at the present extra session of the Legislature of Illinois, for the necessary charter to construct the 35 miles from Naples to Douglass, as the reason for refusal on a former occasion, viz: "that there was no town in Illinois at the western terminus"—is now removed.

The Hannibal and St. Joseph road is in competent hands, and will be pushed to an early completion. Its advantages to the state of Missouri will be many and its coal trade alone, willl be a source of great profit.

CITY RAILROAD STOCK.

It has been a mooted question among the people as to the propriety of cities and counties subscribing for railroad stock. We have already given some examples where it has been done, and very profitably, too, We now give the report of the Commissioner of the City of Cleveland, which we find in the *Herald* of that City, by which it appears that the net profit accruing to the City from the Stock of two roads, are $19,349 40, in one year! The *Herald* says:

Last evening, the Commissioners having charge of the City's Stock in the Cleveland, Painesville and Ashtabula Road, reported to the Council their action during the past year. The following have beeu their receipts and disbursements:

RECEIPTS.

Delinquent RR. Tax of 1852	$94 50
Interest on Stock from May 7, 1852, to Jan. 1, 1853	4,000 00
Dividend declared Jan. 1, 1853	6.000 00
Interest on $4,000 City Bonds issued to C. C. & C. RR.	120 00
Sale $25,000 Increased Stock	5.000 00
Dividend July 1, 1853	5.200 00
" Feb. 1, 1854	5.600 00
Interest on Erastus Case's Note	24 17
	$26,038 67

DISBURSEMENTS.

Paid Interest on Bonds May 1, 1852, to Jan. 1, 1853	4,666 67
7½ per cent. installment on $20,000 increased Stock	14,500 00
Interest on Bonds from Jan. to July 1853	3,500 00
" " January. 1854	3,500 00
" and Telegraphic Dispatch	6 98
	$26,173 65

During the last year the Company increased its Capital Stock forty-five per cent., and allowed the original Stockholders the right to subscribe to this increased Stock in "pro rata" to the Stock held. The amount of Stock the City of Cleveland was thus entitled to subscribe, amounted to $45,000, and as the Commissioners had no power to subscribe for and in the name of the City to this new Stock, they sold out the City's right to subscribe to $25,000 of it, for $5,000, and subscribed themselves to the remaining $20,000 to be held and used by them for the benefit of the City.

The statement given above, shows that the actual gain to the City, upon the Stock owned in the Cleveland, Painesville and Ashtabula Road, during the past year, over all interest and expenses, is, $14,365 02.

The Commissioners having charge of the City's Stock in the Cleveland and Pittsburgh Railroad, also reported to the Council last even-

ing, that their only action since last report had been the payment of interest on bonds, and loaning the surplus of dividends over said payments to the Company on interest. This surplus, up to Jan. 1st, 1854, amounted to $2,284 38; and on the 25th of January, 1854, the City realized an additional dividend of $5,700, exceeding the semi-annual demand for interest, $2,750, and making the income from the stock since the Commissioners' last report, $4,984 38.

The City's income from the Cleveland, Painesville and Ashtabula, and Cleveland and Pittsburgh Stocks, was $19,349 40.

NEW YORK STATE RAILROADS.

STATE ENGINEER'S ANNUAL REPORT.

For the following items of New York State Railroads, we are intebted to the Cincinnati *Gazette*.

NEW YORK RAILROADS.—We take the following items from the annual report of the State Engineer of the Railroads of the State of New York.

	MILES.
The length of all the Railroads in operation in the State, is	2,433
The length of railroads laid, is about	2,497
The length of double track in addition to the above, is	664
The number of locomotives in use, is.	586
" " passenger cars "	834
" " baggage and freight cars in use is	6,895
" " miles run by passenger trains, is about	6,594,963
" " miles run by freigh tr., is about	4,227,807
Total number of miles run	10,822,770
The capital stock is about	$112,038,131 45
" " " paid in, is about	61,238,829 32
" amount of funded and floating debt. is about	59,669,478 38
" amount paid for construction and equipment is	117,707,620 58

Twenty-three Railroad Corporations have made full reports of cost and construction and equipments from which we make the following estimate of average per mile:

For graduation, masonry and bridges for 2,066 miles of road	$17,162 61
For superstructure, including iron for 2,066 miles of road	11,915 61
For station buildings for 2,066 miles of road	1,555 87
For engine houses and machine shops for 2,066 miles of road	585 29
For land and fencing for 2,066 miles of road	3,751 30
Total exp'ses of construction and equipments for 2,105 miles of road	45,091 81

The No. of locomotives on 2,076 miles is 1 to four and one-third miles of road. The number of passenger cars on 2,076 miles, is one to four and one-third miles of road. The number of freight cars on 2.076 miles, is one to 38-100 miles of road. The average milcage of the passengers for each mile run by the trains, seventy-six. The average distance traveled by each passenger is nearly forty-eight and a half miles. The average speed of the express trains, when in motion is forty miles per hour. The average number of tons of freight for each mile run by the trains, is sixty-two tons. The average distance each ton of train was moved, is 72¼ miles. The average speed of the freight trains when in motion, is sixteen miles per hour. The average weight of the freight trains, exclusive of the freight carried, is 100 tons.

As near as can be ascertained, about one and a half millions of tons of freight were carried on all the railroads of the State.

Of the whole tonnage, the product of the forest is 12 per cent.; animals 20 per cent.; vegetable food 22 per cent.; other agricultural products 4 per cent.; manufactures 12 per cent.; merchandise 11 per cent.; unclassified articles are 17 per cent.

The average cost of maintenance of way, such as repairs of road bed, buildings, fences and taxes, was $690,12 per mile.

The average cost of operating the road, per passenger, and per ton freight, for one mile was 5.56 cents per passenger, and 9.20 cents per ton freight.

ALABAMA AND TENNESSEE RIVER RAILROAD.

From the Mobile Evening News we derive the following particulars in regard to the progress of this work:

The road is now in operation from Salem to Montevallo, a distance of *fifty-five* miles, and is daily traversed by passenger and freight trains. So far it is a permanent and well-constructed work. The grading and masonry of the road is under contract between Montevallo and the east bank of the Coosa river, and also a portion of the road between the Coosa and its terminus at Gadsden. The former is to be finished on the first of July next, and is expected to be in running order by September next. The latter portion—over eighty-two miles—is more than half graded, ready for superstructure, and only twenty four miles is not yet under contract. This portion is light work, and can be graded in from four to eight months from date of contract. The amount required to finish the road to the hundred mile station, and to prepare the read to Gadsden, for the superstructure, is estimated at $848,-647. The treasurer's report shows the probable resources of the company to be $678,082, which only leaves a balance of $170,575 yet to be obtained. These resources are composed of a balance due by stock holders $517844, cash on hand and bills receivable, $125,228 and city of Selma stock, $36,000.

The total cost of the entire road, equipped for business, was estimated in 1851, at $7,770-000—a time when labor, provisions, materials &c., were considerably lower than now. It is ascertained that the preparation of the road bed for the rails will not exceed the estimates but the advance in the price of rails, spikes &c., will add to the cost abeut $1,000 per mile and the probable cost of the road complete to Gadsden will be $2,600,000, which sum includes depots, locomotives, cars &c. This will require a balance to be raised of 948,345, which is proposed to be done as follows:—After the road has been constructed 100 miles to issue the balance of the first mortgage bonds, amountingt $333,450, and to obtain a loan from the State, of 500,000 at 5 per cent. interest—the remainder ($280,470) to be raised by individual subscriptions. If this plan should fail, the several counties through which the road passes will be solicited to subscribe for stock, and this mode can scarcely fail of success. Fifteen hundred tons of rails have been contracted for, to be delivered in Mobile, in May next. The total length of the road will be 167½ miles, fifty-five of which is in operation, thirty more are expected to be in operation in September next, and the remainder —something over eighty-two miles—is more than half graded, and only twenty-four miles is not yet under contract.

The road has earned $37,535, exclusive of $21,312 estimated value of transportation for road itself; expense same time $31,889—leaving a net income from real earnings of $5,646, or including the item of $21,312 mentioned above, it will leave the sum of $26,958 as the earnings of the road since July last, at which time the cars commenced running.

Covington & Ohio Railroad—Appropriation Defeated.—Our Virginia exchanges comes to us filled with regrets in consequence of the action of the Legislature of that state, by which the appropriation of $2,000,000 to aid in the construction of the Covington & Ohio road was defeated. We can truly sympathize with our friends in this strait; and sincerely regret that any minor circumstances should have been permitted to weigh against the prosperity of this valuable connecting link with the West. We are not accurately posted as to the direct cause of the defeat of the appropriation, but we have seen it intimated that the *gauge* adopted by the company, 4 feet 8 inches, had a great influence, inasmuch as it enabled the road to connect without break with other Western roads. We trust that such was not the fact, and that this suicidal, one-idea policy of "break of gauge" is confined to the single locality of Erie. We hope that a more enlightened spirit prevails the "Old Dominion," and that causes of which we yet know nothing, and which will eventually be removed, brought about this much-to-be-regretted state of affairs.

The Virginia connections with the West, and with Ohio in particular, are destined to be of great value to the former state, and should be fostered with truly paternal care.

LOUISVILLE, NASHVILLE AND CLARKSVILLE RAILROAD.—Mr. Peabody, engineer, has concluded his preliminary survey of the Louisville, Nashville and Clarksville Railroad, and laid a report thereof before the Board of Directors. The available resources at the command of the directors, amount to about $1,500,000. The estimated cost of the road, Mr. Peabody sets down in round figures at $150,000 more than that sum.

EVANSVILLE AND INDIANAPOLIS STRAIGHT LINE ROAD.—The Evansville *Enquirer* of the 23d ult., comes to us filled with the speeches of O. H. Smith and Willard Carpenter, Esqrs. upon the importance of this road, and its future prospects. From Mr. Carpenter's remarks we take the following item of subscriptions to this road, already made, viz:

Vanderburgh, including Evansville and Lamasco	$414,970 00
Gibson and Warwick	95,000 00
Pike, ($18,000 conditional)	45,000 00
Daviess, ($38,000 do)	58,000 00
Greene, Owen, Morgan, Jackson and Marion	650,000 00
Stock taken by contractors in 1st Div.	200,000 00
Total	$1,408,970 00

Communications.

LEGALITY OF COUNTY BONDS IN TENNESSEE.

As the decision of the Court is too long for publication, we insert the letter of Mr. Gardner, which gives the substance. The Court decided in favor of the legality of the Bonds.

Office Nashville and N. W. R. R. Co.
NASHVILLE, Feb. 22d, 1854.

E. D. MANSFIELD, ESQ.,

DEAR SIR: Enclosed I send you a copy of Judge Baxter's opinion in the case of the Louisville and Nashville Railroad Co. vs. the County Court of Davidson county.

On the 26th of March, 1853, the people of the county voted $1,000,000 of 6 per cent. County Bonds, to four railroad companies, namely, to the Louisville and Nashville Co., $300,000; to the Nashville and North Western Co., $300,000; to the Tennessee and Alabama Co., $200,000; and to the Nashville and Henderson Co., $200,000.

At the January term of the county Court, 1854, the Louisville and Nashville Co., applied to the Court to levy a tax to pay the interest on $100,000 of Bonds issued to that Co. which the Court refused to do. Whereupon the Company filed their petitition in the Circuit Court praying a *mandamus* to *compel* the county Court to levy the tax, and the enclosed is the opinion of Judge Baxter, determining the case in favor of the railroad Company. An appeal has been taken, which will be tried in December.

I also send you a copy of our Comptroller's report, showing the assets and present liabilities of the State.

In a few days Mr. Clairborne will forward you a statement of the length of each of the roads *within the State*, to which aid, in the shape of State Bonds, has been granted, to the amount of $10,000 per mile, and the aggregate amount of state bonds which may issue to railroad companies.

In any event we shall have a portion of our line under contract within the next three months, and should contractors come forward and offer to take the whole on favorable terms, we would give it to them at any time.

Continue to send me the *Railroad Record*. I am decidedly better pleased with it than any publication of the kind I have yet seen.

Very respectfully, yonr obedient servant,
JNO. A. GARDNER.
Pres. N. & N. W. R, R. Co.

EEL RIVER RAILROAN.—We have rceived a commnnication signed "N," complaining of our article upon the consolidation of this company with the Wabash Valley Road, as it appearod in our issue of the 16th. We refer "N," to No. 52 of the *Record* In which the correction was made, we giving in both cases, our authority for the article.

CINCINNATI, CUMBERLAND GAP AND CHARLESTON RAILROAD.

The following communication from a valued correspondent, will show for itself. We have spoken of this southern connection on a previous occasion, and doubt not that Cincinnati will lend her aid to the project at the proper time.

For the Railroad Record.

MR. EDITOR: In the early part of the present session of the Legislature of Tennessee, I wrote you a few lines in regard to what was being done by our General Assembly for the encouragement of the construction of the Cincinnati, Cumberland Gap and Charleston Railroad. I then told you that a liberal charter had been granted to build said road, and that a bill was pending appropriating the bonds of the state, to the amount of eight thousand dollars per mile, to aid in the construction of said road. I can now inform you, with much pleasure, that said bill has passed into a law, amended so as to grant much more liberal aid than its friends thought fit to ask in the original bill. The bonds of the state are loaned to said railroad company, to the amount of ten thousand dollars per mile, on so much of said road as will lay witbin the limits of Tennessee. Also, the same law provides for an additional appropriation to said road of two hundred thousand dollars, for the purpose of building railroad bridges across the principal water courses on the line of said road. This road will be one of the most important in the state, and the most important to East Tennessee, by affording a direct communication with your flourishing city, for our marble, hydraulic-lime, burr-rock, lead, copper, zinc, and pig iron; and with the cities of Beaufort and Charleston for our grains, fruits, vegetables, pork, beef, etc., thereby enabling us to exchange the products of our country, for your dry goods, g'oceries, and every article manufactured by your city, and for the cotton, rice, tropical fruits and other products of the South. And thus, while we in East Tennessee are to be greatly benefitted, your city cannot be indifferent to the construction of a railway that will penetrate one of the best stock growing states in the Union, one of the most extensive coal fields in the world, one of the richest mineral sections of the Union. in iron marble, copper, and hydraulic-lime, (East Tenn.,) and that will give your city the most direct connexion with the southern seaboard at two very important points—one by way of the Central North Carolina Railroad at Beaufort; the other at Charleston, South Carolina, giving your city direct commercial intercourse with the southern seaboard at those points, which would certainly open a vast field of trade and wealth for the enterprise and industry of the Queen City of the North-West, and make her already thriving citizens much more prosperous.

The importance of the Cincinnati, Cumberland Gap and Charleston Railroad to your city, will, I hope, cause a hearty co-operation with the friends of this enterprise, in Kentucky, Virginia, North and South Carolina, and that you will devote a part of your time, talents and valuable *Railroad Record*, in exciting a lively interest in this great highway of trade between your city and Charleston.

Your Friend,
M. CARRIGER.

Nashville, Feb, 20, 1854.

Eastern and Western through Connection.

At a Railroad Convention held at Philadelphia on the 8th ult., the Peoria Oquawka R. R., represented by a committee—the Logansport and Pacific, by a President and two Directors—the Logansport and Lima by its President—the Steubenville and Indiana by the President—the Steubenville and Pittsburgh by the President—and the Pennsylvania Central by a committee; and all of the representatives being present except one, it was

Resolved, That the Peoria and Oquawka Company of Illinois, the Logansport and Pacific of Indiana and the Ohio Railroad Companies are in one interest, and are ready and willing to unite their lines of road to effect a main through line from the city of Burlington, Iowa, to Philadelphia, if a proper arrangement can be effected witb tbe Pennsylvania & Ohio Roads.

Resolved, That the respective companies represented be requested to furnish statistics of the population and productions of the counties which will rely exclusively upon said line for their eastern trade and travel.

Resolved, That it is important to establish a joint and common interest upon some practicable basis between tbe several companies from Burlington, Iowa, to Philadelphia, for the freight and travel passing from the roads of one of the companies to and over the roads of the other, that delays may be avoided, expenses and commissions prevented, and assurance to capitalists given in lending their means that this great trunk line shall be sustained and governed by one common interest, and made subservient to no other.

Resolved, That the line of the road starting at the Missouri river, at the mouth of the Platte, crossing the Mississippi river at the city of Burlington, the Illinois river at the city of Peoria, the Wabash river at Logansport, and the Ohio at Pittsburgh, to join the great Central Pennsylvania Railroad terminating at this city, is a great national thoroughfare, and commends itself to public confidence for its directness of course, lowness of grades, freedom from curvature, uniformity of gauge, cheapness of construction, the rich agricultural region through which it runs, the timber, stone, metals, coal, and its boundless rich prairies.

Resolved, That the incomplete portions of this line extending to the Missouri river, have a just claim to a grant of the public domain from our national councils, binding as it will, with an iron band, stronger the ties of friendship, interest and consanguinity, the citizens of these several states; expediting the transit of mails, affording facilities for transporting troops and munitions of war, distributing the coin of our mint, and giving by this applica-

tion, to Pennsylvania and Ohio a participation in the grants of the public domain.

Which, after discussion, were unanimously adopted.

Resolved, That an Executive Committee be appointed by this Convention, who shall have full power to carry into effect the spirit and object of this Convention.

Whereupon, Geo. C. Bestor, Williamson Wright and Wm. Chase were appointed said Committee.

COAL IN MISSOURI.

In looking over the Report of James M. Bucklin, Esq., Engineer of the Hannibal and St. Joseph Railroad, we find the following relative to the coal and coal region of Missouri. The Report says:

The greatest obstacle to be surmounted on the route of the Hannibal and St. Joseph Railroad, were supposed to exist in passing the "Elk Knobs," in Macon county, between "Yellow Creek" and Chariton River, a distance of twenty miles. A favorable location was, however, obtained through this locality; the peculiar features of which consist of short conical ridges, formed by irregular ravines, several of which lead to a point common to each, and after running in opposite directions, curve abruptly and unite; thus forming what is generally called the "Knobs," some of which are so regular in contour, that they resemble more the works of Art than of Nature.

The summit of the "Knobs" seems to have been a common level, in some instances two hundred feet above the general surface. A tendency to this conformation is first observed in Township 60, and extends down to Township 56; but they are seen in all their prominent characteristics in Townships 58 and 59. They are drained by the Muscle Fork. The forces operating in producing these distinctive features, must have acted differently upon the surface on either side of this particular locality; for, while the "Knobs" exhibit the effect of the action of subsiding waters, the former indicate that of a violent current, producing extensive, well-defined valleys and ravines. Indeed, the whole surface from the "Elk Knobs" west to "Grand River" seems to have undergone the process of what is termed by Geologists denudation, by which all the superior and a portion of the inferior strata have been carried off. The effect of this denudation has been to expose and render available an immense bed of bituminous coal, with which a greater portion of the country is underlaid; it extends a distance of seventy miles, varying in thickness from one to nine feet; the maximum of which occurs in the vicinity of Bloomington, Macon county. It is discovered at frequent intervals.—On Grand River at a depression of ninety feet below the Missouri River, at St. Joseph; in the Valley of "Locust Creek," at a depression of seventy feet; in the "Muscle Fork" at a depression of 30 feet, and on the middle Fork of the Chariton at five feet above the Missouri River, at the point before mentioned, showing a uniform rise towards the east of about one foot per mile.* It probably terminates in the dividing ridge between the Missouri and Mississippi, a few miles east of Bloomington; between this point and the Mississippi an accurate geological examination will be required to determine the precise condition of this coal measure, as there may have occurred either a dip in the opposite direction, or a "fault" in its position. The coal formation at Grand River is undoubtedly identical with that at Bloomington and the intermediate points, the overlaying strata being the same—laminated sandstone of fine grit. This stratum of coal disappears at Grand River, in consequence of its "dip" westward and the great increase of the elevation of the general surface; it is therefore covered to a depth that prevents its appearance on the line westward. At an elevation of fifty feet above this formation, on the west side of Grand River, there are indications of coal. It was supposed that it might prove to be the margin of another Coal Basin, with a "dip" eastward, increasing in thickness westward. This is probably the case; but the increase of thickness is not sufficient to render it of any practical value. It was traced west for forty miles.

* The true dip is probably S. W.

THE VIRGINIA RAILROAD SURVEY.—The Virginia House of Delegates has adopted an order directing the Board of Public Works to cause to be surveyed the nearest and best routes for a branch railroad from some point of the Covington and Ohio Railroad between the mouth of Green Briar river and Covington to some point of the North Western Railroad between Parkersburg and Three Fork, in Taylor county, and to Wheeling, and to make to the General Assembly a full report of the survey for such road, together with estimates of the cost of construction and such other information as may be deemed useful.

RAILROAD REPORTS, EARNINGS, ETC.—We would once more request that Secretaries of Railroad Companies, would furnish us with statistics of their roads, especially with their regular "monthly earnings," when made public. These "earnings" are of great importance to us in making up various tables, estimates, etc , relative to railway operations, and we propose to publish in the last issue of each month, a table of the earnings of the previous month, as far as we can obtain them. We hope that our request will meet with a ready response.

CHARLESTON AND SAVANNAH RAILROAD.—We see by our exchanges that subscription books for this Company will be opened on the 6th inst. Three different corps of Engineers are now in the field surveying the different routes. A great activity prevails along the line, and measures have been adopted to advance the success of the enterprise, with as little delay as possible.

☞THE Cleveland *Plaindealer* says Alfred Kelley, of Columbus, has resigned the Presidency of the Cleveland, Painesville and Ashtabula Railroad, and is succeeded by William Case, of Cleveland.

EAST TENNESSEE AND VIRGINIA RAILROAD.—At a recent meeting of the Directors of this Company at Jonesboro', Tenn., it was resolved to lay the road with the inverted T rail; and contracts were authorized for iron sufficient to equip the first section from Knoxville.

Sales of the State Bonds in aid of the Company, have been effected to the amount of $66,000, at a premium of 10 per cent., and of $20,000 County Bonds, at 90 cents.

ATLANTIC AND MISSISSIPPI RAILROAD.—The bill authorizing the construction of this road, better known as the Terre Haute and St. Louis, or Brough's road, passed the Legislature of Illinois at its present extra session.

The means have been ready some time, only awaiting the favorable action of the state authorities, to proceed at once to its construction.

RAILROAD CAR AXLES.—No less than sixteen car axles were broken upon the New York Central road in one week, in last month. They became contracted by the cold and broke off like pipe-stems.

Read the article in this issue of the *Record*, on "Hollow Railway Axles."

COLUMBUS, PIQUA AND INDIANA RAILROAD.—The following persons were elected Directors of this road for the ensuing year, in Piqua on the 14th ult.: M. G. Mitchell, R. Walkup, J. R. Hilliard, Wm. Dennison, jr., R. E. Neil, S. G. Brecount, T. M. Gwynne, D. Alexander, E. Martin. S. Medary, D. D. Hunter.

Six thousand seven hundred and seventy-eight votes were cast.

☞It is stated that Charles Minot, Esq., Superintendant of the Erie Road, has resigned his position, the resignation to take effect in a few weeks. His successor is not yet appointed.

FREMONT AND INDIANA RAILROAD.—The entire portion of this road between Fremont and Findlay is graded, and the ties are distributed for about one third of the same distance. Beyond Findlay westwardly, nothing has yet been undertaken. Between Lima and Union two lines have been run, one 53, the other 51½ miles, which will be adopted has not yet been decided upon. Messrs. Shoemaker, Doolittle & Co. are the contractors.

☞A BILL providing a sinking fund of $50,000 the first year, and $10,000 additional every year thereafter, for the purchase of the works of the Camden and Amboy Railroad, at the expiration of their charter, was ordered to a third reading in the House of the New Jersey Legislature without opposition.

HOLLOW RAILWAY AXLES.

There is no portion of the rolling stock of railroads more subject to accident and breakage than *axles*, and no cause of accidents is more prolific of death and maiming than the breaking of axles. It is necessary, therefore, that all attempts to remedy this defect should meet with proper encouragement. The subject of "Hollow Axles," has recently been introduced; and if what is claimed for them, or even the half of it, be true, there can be no question of their superiority.

In numbers 336 and 338 of the Journal of the Franklin Institute, we find a paper read before the "Institution of Practical Engineers" by J. E. McConnell, upon this subject, which being of so much interest to the railroad public, we find room for in our columns.

With the view of improving the strength and durability of railway axles—the two most important points for insuring the safety and security of railway traveling—the writer, after repeated experiments, and obtaining all the experience and information he could collect on the subject, arrived at the conclusion that the hollow or tubular axle combined in itself, if properly manufactured, all the properties necessary to secure the best form for lightness, strength and uniformity of structure in the material, elasticity to neutralize the injurious effects of blows and concussions, and consequent durability, from having a greater freedom from deteriorating effects.

The selection of the tubular form of axle originated from the knowledge, that with a considerably less weight of material in the form of the tube, a much greater strength can be obtained to resist torsion, deflexion by pressure or weight, or concussion from blows. The resistance of a solid system to deflexion and torsion, increasing in proportion to the fourth power of the diameter (or the square of the square), but the weight increasing only as the square of the diameter, two solid cylinders, having the respective diameters of 4 and 5 inches, or 1 to 1¼, will have a proportionate weight of 16 to 25, or 1 to 1½, but a resistance of 256 to 625, or 1 to 2½. Then if a hollow of two-thirds the diameter be made in the larger axle, its weight will be diminished one-half, and its resistance only one-fifth, and the comparison with the smaller solid axle will then be one to 1¼ in diameter, 1 to 7-8th less weight.

The use of hollow axles was tried some years ago, but was not continued, the main objection being, that there appeared a great difficulty of insuring, by the particular mode of manufacture adopted at that time, a sufficient uniformity of thickness of the sides of the tube throughout and also of the soundness of the material. The mode adopted consisted of rolling two or three bars of a semicircular cross section, which were welded together with butt-joints, but with no internal pressure, and with solid ends where the bearings come. These axles having no mandril or internal pressure during the process of welding, were found to be of a very uncertain strength throughout the axle, and the weakest point might be close to that part where the greatest force or strain would be exerted.

To overcome these objections, a mode of manufacturing railway axles has been introduced by the writer, which, it is believed, effectually accomplishes the object in view, securing the utmost strength with the least possible amount of material, uniformity of structure of the iron, perfect equality of thickness of material, and soundness of manufacture.

The plan adopted is as follows:—A number of segmental bars of the best quality of iron are rolled to a section, so as to form when put together ready for welding, a complete cylinder, about 1½ times the diameter of the axle when finished, the bars fitting correctly together, so as to have no interstices, and overlapping in such a manner as to insure a perfect and sound weld when completed.

This cylinder of loose segmental bars is temporarily held together by a screw-clip, and each end being put into the furnace until a welding heat is produced, the bars are then partially welded together, and the clip removed. The whole cylinder is then placed in the furnace, and brought to a proper welding heat; it is then passed through a series of rollers, which have each a mandril of an egg form, in the center of the circular openings, which are attached and supported on the end of a fixed bar, the bar being firmly secured at the opposite end, to resist the end pressure or strain during the process of rolling. The mandrils are made of cast iron, chilled, fitting on like a socket on the end of the bar to a shoulder, and they are secured by a screw-nut, so that they are easily removed when required.

The motion of the rolls is so arranged, by a reversing-clutch on the shaft, that as soon as the axle-cylinder has been drawn clear thro', the motion is reversed, and the axle, which has been drawn on the mandril-rod, is again drawn back through the same opening in the rolls; it is immediately passed through the next smaller groove of the roll, with a decreased size of mandril, and again reversed back through the same groove in a similar manner, and so on through a series of grooves in quick succession, each decreasing in size, and consequently increasing the compression and strength of the iron of which the axle is formed, and by the last groove it is reduced to the proper diameter. At each time it is changed from one groove to another the axle-cylinder is turned by the workmen a quarter round, so as to equalize the pressure on every part of its surface, to insure uniformity of the compression of the iron, and thoroughly complete a sound welding throughout every part of the axle.

The specimens before the meeting showed the soundness and perfection of the manufacture, as a proof of which, in every test applied, either by blows on the outer surface or by an immense splitting pressure, by driving a mandril in the interior, there has never been found in any one instance a failure of the weld, although the test has been applied to pieces cut off the extreme end, where it might be supposed the welding of the cylinder of the axle, from various causes, would not have so good a chance of being perfect.

The axle at this stage, after being welded and drawn down in the rolls to the proper size, is taken at once to a hammer, where it is planished between semicircular swages over its entire surface. A small jet of water plays upon it during this process, which enables the workmen to detect at once, by the inequality of color, any unsoundness in the welding.—From the hammer it is taken to the circular saws, where it is cut accurately to the length required, and ready to have the bearings formed upon it.

On coming from the hammer, the axle is found to be perfectly clean both inside and outside, the scale being entirely removed.—The ends are then re-heated, and gradually drawn down by a hammer to the proper dimensions and form of the journals, a mandril being inserted in the end of the tube during the process of hammering.

The formation of the journals can also be produced by a rolling machine, constructed of tables the entire length of the axle, rolling transversely, each table being a duplicate of the other, and matrices of the axle when finished. Or in another way by two sets of rollers, each set consisting of three rollers running vertically, being of the same diameter, and driven at the same velocity, formed exactly to the shape of the bearing, and set the proper distance apart from shoulder to shoulder of the journals.

As an illustration of the saving in dead weight, take, for instance, a railway employing 15,000 wagons and carriages, and assume each of these vehicles to run on an average 10,000 miles per annum. The weight of two axles of the solid description finished, say 5 cwt., and if replaced with hollow axles of equal strength, the weight per vehicle may be reduced 1½ cwt.; this taken over one mile of the above stock per annum will be 11,250,000 tons, and assuming the cost of traction for locomotive power at ¼*d.* per ton per mile, the saving will amount to 11,700*l.* per annum, without taking into account the other advantages, and also the saving to the permanent way, &c.

In the sample of axles submitted to the meeting, two different kinds of bearings were shown, the parallel bearing with the rounded shoulder, and also the double conical bearing, such as is used on the Great Northern, Great Western, Bristol and Exeter, South Wales, and South Devon Railways.—In either description of bearing, the hollow axle is good, although it is believed that the conical bearing for *either* the solid or hollow axle has less tendency to injure the texture of the iron during the formation of the journal than the paralleled shouldered axle, and it appears a matter well deserving the consideration of the Institution, to ascertain what under all conditions, is the best form of axle bearing.

Experiments, conducted by Mr. Marshall, the Secretary of the Institution, have been tried for the purpose of ascertaining the comparative strength of the hollow and solid axles to resist a transverse strain. Each axle was supported on massive cast iron blocks, fixed at distance of 4 feet 11 in. apart, to represent the support given by the rails to the axle. A cast iron block weighing 18 cwt. was then let fall on the center of the axle from a hight of 12 feet, and the extent of bending was measured. The axle was then turned half round, and another similar blow given on the opposite side, bending it in the opposite direction.—This proceeding was repeated until the axle was broken. The general results of these experiments are as follows:—

An *Old Solid Axle*, 3¾ inches diameter in center, 4¼ inches at ends, which had been at work three years, was bent 8¾ inches by the first blow; it was nearly straightened by the second blow in the opposite direction, then bent 10 inches by the third blow, and with the sixth blow it was broken in the center square across.

A *New Solid Axle*, of the same dimensions, was bent 9¾ inches by the first blow, then nearly straightened by the second blow, and bent 9½

inches by the third blow, and by the fourth blow 2½ inches and by the fifth blow it was broken ¾-inch from the center. The appearance of the fracture was crystalline over three-fourths of the section, the remaining part tough fibre.

A *New Hollow Axle*, 4⅝ inches diameter throughout, was bent 5 inches by the first blow, nearly straightened by the second blow, and bent again 5 inches by the third blow.—The ninth blow bent it 4½ inches, and the tenth blow 1⅜ inch. Up to the fifteenth blow it was bent alternately, the bends varying from 2 to 3½ inches. There was no appearance of failure or cracking, but a slight rising of the surface at the fifteenth blow.—The blows were continued to the twenty-seventh, the bends varying from 2 to 3⅝ inches, and at this blow a fracture took place across the middle of the axle 1½ inch long. The twenty-eighth blow bent it ⅜-inch, and closed the fracture on the opposite made by the prepreceding blow. By the twenty-ninth blow it was fractured two-thirds through, and bent 9½ inches, the appearance of the fracture being very fibrous,

A second series of experiments was made, to ascertain the comparative strength of the journals of the hollow and solid axles to resist breaking.

Each axle was supported on an anvil, with the inner shoulder of the journal projecting 1½ inch beyond the edge of the anvil, to represent the support of the axle in the nave of the wheel; 100 blows with two 24 lb sledge-hammers were then struck upon the upper side of the outer end of the journal, the men being changed after striking each twelve or thirteen blows alternately. The amount of bending of the journal was then measured, and the axle turned half over, and another 100 blows similarly given on the opposite side of the journal; the same proceeding being then further repeated. The general results of these experiments are as follows:

An *Old Solid Axle*, with 3 by 5 inch journals, that had been at work three years, had one journal broken off with 205 blows, and the other with 53 blows; both fractures were square across the journal at the shoulder.

A *New Solid Axle*, with 3 by 5 inch journals, had the journal broken off with 570 blows, the fracture being irregular in form, and fibrous.

A *New Hollow Axle*, with 3 by 5 inch journals, had 400 blows on the journal, which bent down the end ⅝-inch, and produced a longitudinal split on the under side 5¾ inches long, but no transverse fracture.

A *New Hollow Axle*, same size journals, received 800 blows on the end of the journal, which bent it down ⅛-inch, and split the journal longitudinally on both sides, but caused only a slight transverse crack near the shoulder, ⅜-inch long.

The experiments on transverse strength by a heavy weight falling on the center of the axle, and giving the blow on opposite sides alternately, show that the hollow axle is nearly double the strength in that respect of the corresponding solid axle, the amount of bending being only 5 inches instead of 9¾ inches; and the number of blows required to break the hollow axle being 29, whilst the solid axle broke at the fifth blow, shows the hollow axle to be greatly stronger in resistance to fracture.

The hollow axle became ⅛-inch oval in the center after receiving the seventh blow, and it was only ¼-inch oval after receiving the twenty-eighth blow just before the fracture; being bulged outward one-sixteenth inch at each side, and one-sixteenth inch inwards at top and bottom from the original circular section.

The experiments on strength of journals show, that instead of the journals breaking off square and short at the shoulder, as in the solid axles, the hollow axle journals stand a considerably greater number of blows, and then only split up longitudinally, instead of breaking off transversely, being a very important advantage in point of safety in working.

In the course of the discussion which followed the reading of the paper, it was remarked, that in the fracture of the hollow axle all the iron appeared fibrous, but the fracture of the solid axles was mostly crystalline; that the saving in weight of the hollow axles was about two-fifths theoretically to obtain the same strength. but it had been taken at one-third of the solid axles, to be on the safe side. The hollow axles were being extensively applied on the North-Western, Midland, and Great Northern Railways, and more than 500 had already been made; some had been at work for nine months with entire satisfaction.

Mr. McConnell observed, that whatever was the nature of the strain, and the change produced by concussion, the effect of the continued blows and concussion to which a railway axle was subjected, must be greatly diminished when the axle had a large hole through the center, instead of being entirely solid, as the effect of a blow on one side would be mostly lost in the vacant space of the center, instead of being all communicated through the mass of the axle. He showed specimens of a hollow and a solid axle, which had been run hot for two hours without oil in a lathe, at a speed corresponding to about twenty miles an hour traveling; the solid journal broke off with 179 blows quite short and crystalline, but the hollow journal, would not break transversely and split longitudinally in several places with 400 blows, and did not appear injured.

Mr. Adams said, he thought the conical journals were preferable to the ordinary cylindrical ones, and they were particularly adapted to the manufacture of the hollow axles, by avoiding the sudden shoulder. He had found the conical journals less liable to heat than the others when well fitted; in the cylindrical journals, as square shoulders were found preferable in practice to shoulders much rounded, it was important to maintain a uniform strength of metal at the shoulder.

Louisville and Sandusky Railroad.—In our last issue we mentioned that an election had taken place at Piqua, for the officers of this Company, but could not give the result. We now give the names of the officers, for which we are indebted to Mr. Elliott, Secretary, as follows: E. Cooke, J. A. Camp, Sandusky; A. A. Harbison, Huntsville; Robert Young, J. P. Williamson, Piqua; Geo. Nishwiz, Milton; Alfred Denny, Eaton—Directors; E. Cooke, President; Wm. Elliott, Piqua, Secretary; Robert Young, Piqua, Treasurer; and Thos. R. Jones, Engineer in Chief. The office of the company is to be located at Piqua.

The Piqua branch of the Eaton and Hamilton road has been merged into this company.

Alton Extension Railroad.—The St. Louis *Republican* states that the Belleville and Illinoistown Railroad extension to Alton, is now fully under way.

The contract for the first eighteen miles from Illinoistown has been let to Frank Field & Co., at fair prices and shanties are going up and choppers and diggers are lining the road. The present abundance of labor ensures a large force on the line during the season, and from Illinoistown through Brooklyn to Venice, for which distance the line follows closely the river bank, laborers are strung along the whole distance. The grading, which is not very heavy, is, by the contract, to be completed by the first of June.

We heartily wish success to this enterprise, which will, in the future, make us independent of the gorges and low waters of the Upper Mississippi, so far as a connection with Alton is concerned.—*Chicago Democratic Press.*

Toledo and Indianapolis Railroad Company.—The stockholders of this Company recently held a meeting in Toledo, at which its organization was fully perfected. The following gentlemen were elected Directors: M. Johnson, A. J. Field, H. H. Dodd, C. B. Philips, of Toledo; J. Purdy, of Mansfield; C. M. Godfry, of Kalida; H. J. Boemer, of Fort Jennings.

At a meeting of the Directors, H. H. Dodd was chosen President; C. M. Godfry, Vice President; Charles B. Philips, Secretary and Treasurer. The first annual meeting was fixed as early as June next,

The President was directed to appoint a Chief Engineer and cause a survey of the route via Mercer, Delphos, Fort Jennings, Kalida, Medary and Gilead, at the earliest practical moment. Measures were taken to immediately ascertain the ability and intentions of the people interested in the construction of this road.

Lyons (Iowa) Central Railroad.—An election of Directors for the Lyons, (Iowa) Central Railroad was held at Lyons on the 14th ult., and resulted as follows:

Thos. T. Davis, Syracuse, New York, President; Thomas A. Walker, Fort Des Monies, Iowa; James H. Gower, Iowa City, Iowa; John Culbertson, Tipton, Iowa; Wm. G. Haun and Derrick Adams, Lyons, Iowa; H. P. Adams, Abel Chandler and David McCartney, New York; S. M. Allen, Boston; Hiram H. Tucker, Thos. Dyer and Paul B. Ring, Chicago.

Samuel McCoy, Secretary.

Chicago and Rock Island Railroad opened throughout.—On the 22nd ult. an excursion train with some three hundred passengers passed over this road from Chicago to Rock Island City, arriving at the latter place about 5 o'clock, P. M., a distance of one hundred and eighty-one miles.

This is the first road from the east reaching the Mississippi river, where it will be met by the Mississippi and Missouri road to Iowa, and continue on to the Missouri river.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

At the West, the demand for money has increased very much within the past week, so, indeed, as to be in advance of the supply. Rates of interest range from 1@1½ per cent. per month. according to the name of the parties.

Eastern exchange has advanced to ¾@1 per cent. premium.

The Stock Sales of the week have been brisk and the prices well sustained, for particulars of which we refer to the appropriate column.

In our last issue we made some remarks relative to the *system* upon which the stock sales are conducted in New York City, which has called forth a letter from Mr. A. H. Nicolay to us on the subject, in which he says that the sales are conducted in the strictest honor, on his part, and on the principle long established and acted on in that city—that he has never offered at any of his sales any stock but what he was authorized to sell, and, he adds:

"In every case the owner has had the right to buy it in if it did not reach the price he was willing to sell at.—This is no secret, and is known to everybody. The only fault that may exist in the system is in reprinting the sales, but that does not lay with me. The newspapers have their reporters there, who take down the prices as they are knocked down, and within half an hour they are in the newspapers of the afternoon. I have no mode of correcting this, as it is often the following day before I am aware myself what has been bought in by the parties.

"I never buy in myself, and every representation I make on the stock offered, is as correct as I can obtain it, so that purchasers have only to consult their own judgment, as to the prices they will give; no inducement is held out for them to give more. If they happen to be bought in by the owner, it is not likely that it is at more than ½ to ¾ per. cent. above the bona fide offer, and that can certainly do no great harm in the quotations of sales.

The system followed by Mr. Davis may be very suitable in your city, where you have no regular Board of Brokers; but here it is entirely unsuitable."

In reply we have only to say, in the first place, that our information was *not* derived from "interested sources," at least so far as we know, and secondly that we never impeached the honesty of any of the Stock Auctioneers in New York or any other city; our remarks were aimed at the *system* by which these sales were conducted. Thirdly, that Mr. Nicolay has only proved by his remarks, exactly what we did assert, viz: "That the reports of those sales did not give the true state of market." Fourthly, that it would be far preferable to us, were we purchasing stock at these sales, to know that *every bid from the start was a bona fide one*, even were the lot declared not sold at last, than to feel every time we made a bid, that the owner stood by to out bid us, and not to know when the final bid was announced, whether the stock was sold or only Peter Funked. And lastly, as to the remark that such a system as we advocate might do for Cincinnati, but would not do for New York. Why will it not? We fear Mr. Nicolay has never visited this "city in the woods"—that should he do so, he would expect to find stumps in our streets, and Virginia fences bordering our thoroughfares. We contend that our system will answer anywhere; that it is a fair one for all parties, sellers, buyers and the community, who are not deceived by reports of transactions that never took place.

ALABAMA.—The Legislature of this State adjourned on the 18th ult., without any definite action upon the "Internal Improvement Law"—so this enterprising state is doomed to languish another year without state aid to her numerous railroad enterprizes.

NOTICE TO CONTRACTORS.

OFFICE PITTSBURGH AND CONNELSVILLE RAILROAD COMPANY.

SEALED Proposals will be received at the Office of this Company, at Neville Hall, in the city of Pittsburgh, until 5 o'clock, P. M. of WEDNESDAY, the 22d day of March next, for the Graduation and Masonry of that part of the Pittsburgh and Connelsville Railroad extending from West Newton, in Westmoreland county, to Connelsville in Fayette county, this State, a distance of 25 miles. This work is generally of a very light character. It will be divided into sections of about one mile each. Proposals will be received for one or more sections.

Proposals will also be received until the same time for the making of the Tunnel at the Sand Patch Summit, on the Allegheny Mountains, about 25 miles from Cumberland. This Tunnel is to be forty-one hundred feet in length, through rock.—The work is worthy the attention of the best contractors. It is in an excellent region to do work cheaply.

Maps, Profiles and Specifications will be ready for the examination of bidders on and after the 6th day of March next, and all proper information given on application to Oliver W. Barnes, Chief Engineer, or the Assistant Engineers on the line.

Satisfactory testimonials will be expected from Contractors not known to the Company. By order of the Board.

W. LARIMEE, JR., President,
mh 1tt] Pittsburgh & Connelsville Railroad Co.

Office Cincinnati, Hamilton and Dayton Railroad,
Cincinnati, February 14th, 1854.

THE Directors have this day declared a dividend of five per cent on the capital stock of this Company, payable at the office of the Company in Cincinnati on and after the 25th inst., till which time the transfer books will be closed; and at the Ohio Life Insurance and Trust Company in New York, on and after the 15th prox.

By order of the Board.
feb.23 FRANK S. BOND, See'y

TO CONTRACTORS.

SEALED Proposals will be received at the office of the undersigned in Indianapolis, until the 15th day of March next, for the grading, masonry and bridging of that portion of the Indiana and Illinois Central Railway between the west line of Edgar county and Decater, Illinois, being a distance of about 53 miles. The map and profile together with the plans and specifications will be ready for inspection at the office of the Company in Decater, on and after March 1st.

Any further information may be obtained at the office of the undrsigned, in Indianapolis.

M. C. STORY, & CO.

LIGHTNER'S

PATENT AXLE BOXES

FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

Sir:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

OFFICE OF THE FITCHBURG AND WORCESTER R. R.
Fitchburg June 2nd, 1853

MR. JOHN LIGHTNER:

Dear Sir:—Your Patent Axle Box has been in use upon our railroad during the last year and has given entire satisfaction. We find our Engines and Cars, require much less power to move them, than others not furnished with this box, and the saving in oil is very great.

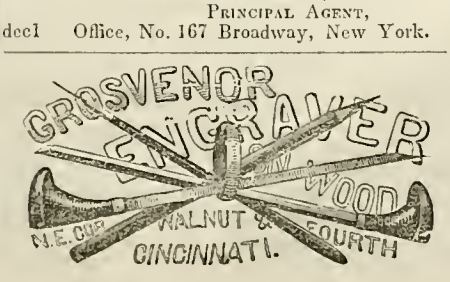
Our freight cars run upon connecting roads, and are sometimes beyond our control; therefore as a matter of safety, we have the boxes examined once a month, and oiled if necessary, the quantity of oil required is small.

Our passenger and baggage cars, which are in constant use, run nine hundred miles per week. We find it necessary to oil them only once in three months. In one or two instances they have run more than sixteen thousand miles, without being oiled or sustaining any injury. Yours respectfully,

IVERS PHILLIPS, President.

BOSTON AND MAINE R. R. OFFICE, HAYMARKET SQUARE,
Boston, July 5th, 1853.

MR. WILLIAM SHERBURNE, Agent for Lightner's Axle Box.



Dear Sir:—We are substituting the Lightner Box in place of all others upon this road, as fast as practicable, satisfied that they are the best we know of. Yours, &c.,

THOMAS S. WILLIAMS, Sup't.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimens of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY.

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¾ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights, now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass, assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co's C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft.

Cross Cut Saws.—Hoe & Co.'s C. S., Jno ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet. Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,

mr 3 140 and 142 Main street.

PHILADELPHIA

Type and Stereotype Foundry.

NEW BOOK OF

Specimens of Printing Types,

PLAIN AND ORNAMENTAL;

RULES, BORDERS, WOOD CUTS, &c., &c.

THE attention of the printing craft and the literary public is respectfully invited to the Minor Book of Specimens of Printing Types, &c., just published by us. The critical eye will at once perceive that it surpasses every work of a similar kind before issued in America, and that it fairly enters into competition with the finest productions of Europe. Everything shown in this book, excepting Wood Type, is actually manufactured by us in our own Foundry, and may be relied upon as being finished in a workmanlike style.

Among its contents, we beg to draw attention to the specimen of our LABOR-SAVING RULES. The economic printer will soon learn to appreciate their valuable qualities, and will be unwilling to dispense with the assistance they afford in the various kinds of Rule work.

THE CALLIGRAPHIC SCRIPTS

Form a new and beautiful variety of Type; and, with the

SCRIBE TEXTS, THE ARABESQUES,

THE COMPOSITES,

THE CHROMATIC TYPES AND BORDERS,

And a large variety of ORNAMENTAL LETTERS exhibited, give peculiar advantages to the tasteful workman in the production of chaste and ornate printing.

The display of plain and substantial Type of the Roman character is extensive. The Scotch faces have lost none of their value and attractiveness of appearance, and are continually growing in he esteem of competent judges of good Typography.

The MUSIC will be found to be unequalled by any manufactured in this country, and not surpassed by any in the world.

The assortment of CUTS is large and various, many of which are furnished in copper at no greater cost than if in type metal, and yet are much more durable: and an Alphabetical Index is given, by which any Cut made by us may be easily found.

The prices of Type are as follow:

Pica at.....	30 cents.	Minion at.....	48 cents.
Small Pica.....	32 "	Nonpareil.....	58 "
Long Primer.....	34 "	Agate.....	72 "
Bourgeois.....	37 "	Pearl.....	1 08 "
Brevier.....	42 "	Diamond.....	1 60 "

Printing Presses, Standing Presses, Cases, Stands, Chases, Galleys, Printing Ink, and every article used in a Printing Office, constantly on hand, at the lowest rates.

Second-hand Presses, and Type used only in Stereotyping, at reduced prices.

Books, Pamphlets, Music, Labels, Wood Cuts, &c., Stereotyped or Electrotyped in copper, with correctness and despatch.

We are also agents for the sale of HOE'S, ADAMS', RUGGLES' and NORTHRUP'S PRESSES, and are prepared to furnish them promptly and at manufacturers' prices.

☞ Our SPECIMEN BOOK will be forwarded gratuitously to Printers who give us directions how to send it. If by mail, sixty cents in Post Office Stamps should be remitted to us to prepay the postage. The bound edition, however, is too bulky to go in the mails, and it will be necessary in ordering one of these to designate whether it is to be sent by express or otherwise.

L. JOHNSON & Co.,

†oc27 No. 6 Sansom street, Philadelphia.

†mr 17 GEO. GARDNER & CO., Boston, Mass

United States Life Insurance

ANNUITY AND TRUST COMPANY,

S. E. Corner Third and Chestnut Streets.

PHILADELPHIA.

THIS is quite the only Company in the city, state, or United States, that proposes to pay its dividends in cash to its members. This Company do not deal in scrip dividends, payable when convenient, but makes every cent of profits available to its members, if preferred, in cash on demand. Capital and premiums liable for loss is over $250,000, and constantly increasing.

Premium payments can be made with reference to the convenience of the parties opening policies with the Company.

Policies will be issued for the benefit of married women and children, free from the claims of the representatives of husbands or creditors.

Policies may be assigned without the knowledge of the Company.

No policy shall be vitiated through error merely, unless there existed at the time a fraudulent intention.

The original amount of policies will be reduced at any time, to suit the pleasure of insured parties.

Policies of two or more years' standing will be purchased upon surrender.

Policies, with the profits, forfeited by non-payment of premiums, may be renewed at any time by the payment of arrears, with interest, provided the health of the party at the time is unimpaired.

The liberality of the traveling license is peculiar to this Company, permission being granted to cross the Atlantic at any season of the year, in first-class steamers or sailing packets, free of extra charge.

The object aimed at by this Institution is stability and perpetuity. The rates of premium have been carefully prepared with reference to fluctuations. The first object of the plan presented is to make certain provision to meet the first motive to insure, and which consideration should be paramount to all others, viz., the prompt payment of losses as they occur; after which, to make such additions of profits to the policy as the progressive gains of the Company will justify, or pay such gains to its members in cash, on demand.

The plan of operation adopted by this Company is one peculiar to itself; no notes are received for premiums. All its operations being based upon cash, its dividends are made available in like manner, or appropriated to the reduction of premiums, at the option of policy-holders. The system is simple, and easily understood by all, an important fact, (see prospectuses;) and for the accommodation of the Company's correspondents, and the numerous persons changing from others to this Institution, the directors, for the convenience of the public throughout the state, have established the following Branch Offices, where all necessary information, prospectuses, annual reports, policies, etc., may be obtained, viz.:

HOME OFFICE, S. E. corner Third and Chestnut Sts, Philadelphia.
Branch Office, No. 5 Nassau St., New York.
Branch Office, No. 18 Congress St., Boston, Massachusetts.
Branch Office, No. 59 Second St., Baltimore, Maryland.
Branch Office, No. 43 Camp St., New Orleans, Louisiana.
Branch Office, Pittsburgh, and Alleghany City.
Branch Office, No. 30 West Third St., Cincinnati, Ohio.
Branch Office, Wheeling, Va.

Directors.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville.

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description, Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf Muskingum Works, Zanesville, O.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

A. G CONOVER, Sup't

Piqua, Sept. 13, 1853. s29-tf.

Zanesville, Wheeling, Baltimore, &c.

First Train—Lightning Express, at 6 o'clock A. M., and second Train, Accommodation Express, at 7.45 o'clock A. M., connect at Columbus with Central Ohio Railroad to Zanesville, connecting with Ohio Stage Co.'s Lines, via National road to Wheeling, connecting with Baltimore and Ohio Railroad to Baltimore, Philadelphia, Washington, etc.

Fourth Train — Evening Express, at 5 o'clock P. M. Passengers by this Train sleep at Columbus and resume by Morning Train, via Central Ohio Railroad to Zanesville, connecting with Ohio Stage Co.'s Line to Wheeling.

Hillsborough.

Third Train—Leaves Cincinnati at 3 P. M., connecting at Hillsborough with Ohio Stage Co.'s Lines to Chillicothe, Piketou, etc.

THE

Railroad Record,

IS PUBLISHED EVERY THURSDAY MORNING,

At No. 167 Walnut St. Cincinnati, O.

E. D. MANSFIELD, EDITOR.

The RAILROAD RECORD will be issued weekly. Will be printed on fine paper, in quarto form, and mailed to Subscribers at THREE DOLLARS per annum, payable in advance.

AS A MEDIUM OF ADVERTISING, for all matters connected with RAILROADS, MACHINERY, Manufactures of all kinds, &c., &c., the RAILROAD RECORD offers inducements seldom equaled. In no portion of the Union is the progress of improvement in Railways, Machinery, &c., more rapid than throughout the West and South, and all information upon subjects connected therewith is eagerly sought for. The circulation of the RAILROAD RECORD will be very extensive throughout these sections, and presents a certain means of bringing all inventions, improvements, &c., in machinery directly before those interested in their uses.

Memphis and Ohio Railroad.—The probability of building this important road is now placed beyond a reasonable doubt. The passage of the "Omnibus Bill" secures to this road state aid to the amount of $10,000 per mile to Kentucky line, beside $100,000 for bridging the Tennessee river, $100,000 for the Cumberland river, and $100,000 for the Hatchie river. This, however, can not be made available until the road is prepared for the iron, and it will therefore be necessary to raise a considerable amount by subscription to grade it, and lay the superstructure.

THE AMERICAN RAILROAD JOURNAL AND WESTERN RAILWAYS.

The *American Railroad Journal* having undertaken to instruct the people of the West, as to how far and where they should build railroads, flatly contradicts facts which we had exhibited in proof of their cheapness and profit. It was a question of *fact*, not of opinion, and we proved that the *Journal* was wrong in every instance. It misquoted stocks, underated New England dividends and substituted *parts* of roads running into Cincinnati for the whole, because they were technically under different charters. Here our business in correcting misrepresentation ended; but the *Journal* has advanced some other matters of fact and matters of opinion, which may serve as an illustration of its general knowledge of Western affairs. It says:

"The *Record* prefaced its article by stating that the cost of a first class, double track, *Western* railroad, fully equipped, would not exceed $35,000 per mile. We corrected this statement by showing that the only two single track roads running into Cincinnati, with but partial accommodations and insufficient equipments, have already cost a larger sum than the *Record* stated to be the cost of *double* track Westrn roads, completed and fully equipped."

These two roads, (as the *Journal* intends,) are the Little Miami, and the Hamilton and Dayton—both of them just as much *part* of a whole line, as the Schenectady and Utica Railroad was of the line from Albany to Buffalo, now called the Central. Well, let us look and see how much these lines cost, and how much the double track probably will cost.

We take the total costruction and equipment of the line from Cincinnati to Sandusky *via* Dayton, as given by the *Journal* as an example:

Cin'ti, Hamilton and Dayton	$2,659,653
Mad River and Lake Erie	4,110,148
227 miles	$6,769,801
Cost per mile	$29,700

Before this road will reach $35,000 per mile it must pay out $1,300,000.

The Cincinnati and Cleveland line cost about $7,000,000, and is 254 miles in length.

Now, that these are the most expensive which can be made in the west, is plain enough, because each of them lies through three cities. But the proposition was a general one; and no man doubts, who has the data before him, that $35,000 per mile will complete the whole aggregate of roads in the West.

"There is not a finished railroad in the West, nor will there be for five years to come."

No, and Cincinnati is not *finished*, nor Dayton, nor Columbus, nor Cleveland, and what is more, are not likely to be for the next hundred years. But, these railways are finished enough to do a great business and pay great dividends. We don't expect to be *finished* in the West very soon, and if you are waiting for that, you must wait a long while.

The *Journal's* idea of the fertility and production of the West, is expressed thus:

"The *Record* thinks that because New England is not as fertile as the West, that consequently the former can supply but very little traffic to railroads. This is very far from being the case. In proportion to their area, the states of Massachusetts, Connecticut and Rhode Island are capable of supplying and do supply, at the present time, a much larger traffic to railroads than any portion of the West."

Now that set us to comparing *equal areas*, to see what the *proportion* of production was.

The three states of Massachusetts, Connecticut and Rhode Island contain, in round numbers, 14,000 square miles, and are just equal in area to that part of Ohio, which is called the Valley of the Miamis and Scioto comprising 28 counties. This section of Ohio has 800,000 inhabitants, or a trifle over one-half the three states mentioned; but in the course of time, will have a great deal more than they.

The following is a tabular statement of the agricultural products of the three States of Massachusetts, Connecticut and Rhode Island on the one hand, and of the south-western portion of Ohio, of equal area, on the other. The comparison is made by reducing the articles to tons weight:

	Mass., Con. and R. Island.	Miami and Scioto Vly.
Wheat	2,195 Tons.	211,324 Tons.
Indian Corn	144,592 "	997,762 "
Rye	33,247 "	4,300 "
Potatoes	170,400 "	47,310 "
Butter	10,150 "	4,994 "
Cheese	7,782 "	481 "
Wool	550 "	914 "
Aggregates	368,916 Tons	1,227,085 Tons.

There is, in a small section of the West, known as the Miamis and Scioto Valley, more than three-fold, nearly four-fold the tonnage of agricultural production which is found in the three entire states of Massachusetts, Conecticut and Rhode Island.

The *Journal* thinks this discrepancy is to be made up by the New England factories, and commerce. Ah! does it think the cotton and woolen goods of these States are heavier than the iron which is transported from Cincinnati! Does it think the people of Massachusetts travel more than they do here? If it does they are equally mistaken on both points. So much for the *Journal's* accuracy.

But, let us turn to another assertion in detail. It says:

"Take the country traversed by the Fitchburg Railroad, for instance; a comparatively barren, unproductive and not very densely inhabited district. It does not receive the business of one-third the area of that commanded by the Little Miami, or Cincinnati, Hamilton and Dayton roads, yet the receipts are larger than either, with a much less mileage. Here is a nut for the *Record* to crack."

The nut is "cracked" by the simple fact that there is no truth in the above statement.

1. By the evidence of the *Journal*, (viz. its own table,) the receipts of the Fitchburg and Little Miami Railroads for the last year were in gross:

Fitchburg R.R. receipts	$574,574
Little Miami R.R. receipts	667,559

2. The average breadth of the belt drained by the Fitchburg Railroad is 16 miles, and that is about the general distance between the Little Miami and Hamilton roads.

3. The length of the Fitchburg is 66 miles. The length of the Hamilton and Dayton, 60 miles, in the part so called. The length of the Little Miami is 64 to Xenia, and 84 to Springfield.

So much for the "large" receipts, the "one third area," and "much less" mileage, which the *Journal* ascribes to the Fitchburg road. No one of these statements is correct, but the *Journal* again says:

"If the West is capable of supplying such enormous traffic to railroads, we wonder why the receipts of these roads are not greater."

In the name of common sense how much greater would you have them? The following are some of their receipts:

Cin'ti, Columbus and Cleveland net	13	per cent.
" Hamilton and Dayton net	10	"
Cleveland and Pittsburgh,	10	"
Madison and Indianapolis,	10	"
Michigan Southern,	17	"
" Central,	8	"

How much greater receipts would you have? Very few of the Western Railroads have been in operation more than a year, but we here predict that four-fifths of the Western Railroads, now under way will pay as well as these.

But, we must hasten on; our task of correction is nearly ended.

"In conclusion the *Record* steps entirely out of the *record*, and abuses us roundly for the grounds we have taken in reference to the affairs at *Erie*, and zealously espouses the Pennsylvania side of the question. This is certainly a singular position for an inhabitant of Cincinnati to take, and a still more singular one for the Editor of a paper devoted to the interests of railroads and commerce."

This is another misrepresentation. We censured the *Journal* for abusing the *State* of Pennsylvania, and have never said anything about *Erie* except to reprove the rioters. The *State* of Pennsylvania is another affair. The abuse of an entire state is a folly. We told the *Journal* that Ohio would do nothing in such a crusade, and it has done nothing, for it can have no interest in espousing the cause of one company against another.

The greatest good of the greatest number, is the true policy of commerce and of railways. There are a great many ways of going to the Atlantic, and it is not for the interest of Cincinnati to favor one at the expense of others.

We have reviewed the *Journal*—only to give an illustration of what they know of the resources and interests of the West—who had undertaken the superfluous office of directing how many railroads we might make. The *Journal* has spoken well of the West—as we quoted from it to show—but certainly is not so well informed as to be appointed censor upon its concerns.

The skies are brightening upon all railways, and even Wall street can afford to be a little good natured towards that great section of the country whence it derives its largest profits. In the late attempt to alarm the country, it seems to us Wall street got rather the worst of the battle. Let it remember, once for all, that the West can, and will walk alone.

CLINTON LINE RAILROAD AND CLINTON LINE EXTENSION.

The "First Annual Report" of the President of these Companies is at hand, from which we gather the following *elements*, viz:

President, H. N. Day, Hudson, Ohio.

Chief Engineer, W. B. Brinsmade,

Resident Engineer, Geo. A. Briggs.

Secretary, I. V. Coe,

The eastern terminus of the Clinton Line Road is at Kinsman, in the north-east corner of Trumbull county, Ohio. Its western terminus is at Hudson, a distance of 55.3 miles. The Clinton Line Extension Road, commences at Hudson and terminates at Tiffin, a distance of 94.45 miles. The Clinton Line and the Extension are two distinct organizations, forming together with the Tiffin and Fort Wayne Road, a through line east and west, through the State of Ohio. The estimates of the Clinton Line, are as follows:

Superstruct. Main Line, 53.3 miles.		$616,705 60
" Side Line, 3.7 "		35,520 00
Fully equipped		1,382,500 22
Or per mile		25,000 00
The "Extension Line" as follows, 94.45 miles.		
Fully equipped		2,500,000 00
Or per mile		25,455 00

The following tables taken from the Engineer's Report of these roads, give the grades and alignments, showing them to be eminently practical for railroad purposes:

Clinton Line.

Level	5 53 miles
Less than 10 feet	11.21 "
From 10 to 15 feet	3.77 "
" 15 to 20 "	3.45 "
" 20 to 30 "	9 66 "
" 30 to 35 "	10.10 "
" 35 to 40 "	17.10 "

The "alignment" is as follows:

Straight line	46.87 "
Curved "	8.43 "
Total	55.30 "

The curves are as follows:

Of 11460 feet radius	0,66 miles.
" 5730 " "	5.16 "
" 3820 " "	1.48 "
" 2865 " "	1.13 "

The "Clinton Line Extension" grades are as follows:

Level	15.79 miles.
Under 10 feet	22.58 "
From 10 to 15 feet	12.46 "
" 15 to 20 "	4.63 "
" 20 to 25 "	14.85 "
" 25 to 30 "	9.79 "
" 30 to 35 "	16.22 "
" 35 to 40 "	10.27 "
" 40 to 45 "	4.70 "

The alignment is as follows:

Straight Line	82.22 miles.
Curved "	12.23 "
Total	94.45 "

The Curves are as follows:

Of 11460 feet radius	3.98 miles.
" 5730 " "	1.51 "
" 3820 " "	4.39 "
" 3502 " "	1.20 "
" 2865 " "	1.15 "

The totals of the main line and extension line, stand thus:

Entire length	149 75 miles.
Of which are straight	128.09 "

The maximum grade is 45 feet, and this only for a short distance in ascending from the Cuyaboga river.

In regard to the gauge of the road nothing has yet been determined. As to the style of the "rail," the engineer, in chief, W. B. Brinsmade, Esq., says:

The original estimates contemplated the procuring and laying down a compound rail of the Winslow pattern, weighing 70 pounds to the yard, with cross ties laid two feet from center to center, 6 × 9 inches and of sufficient length to exceed the the gauge of the road (which is yet undecided) at least three feet. I have more recently investigated the comparative merits of the continuous and ordinary T rail, and find myself more confirmed in the favorable opinion I had entertained in regard to the former. It has been urged heretofore, that its recent introduction precluded the possibility of any satisfactory test to determine its comparative durability; but this objection has now lost its force since the Utica and Schenectady company in New York has carried its immense traffic over some ten miles of this compound rail for the last four or five years with the most satisfactory results. It is shown that the more rapid wear of the rail is compensated by the large saving in repairs of the entire superstructure; a much less force of men being required to keep the track at the true surface of grade. Also in the items of repairs to machinery, it is evident that the continuous rail must effect a still more important reduction, although from the nature of

the case, the actual saving cannot so readily be arrived at. This then, in my opinion settles the point of preference as its merits in the question of superior comfort to the traveler, and increased safety at high rates of speed, will not admit of a doubt. In these days when the traveling public have grown impatient at the slow progress of the mere express train, and are content only when flying in the lightning express, it will be your duty as well as privilege to adopt all well established improvements. With the continuous rail, of the weight proposed, well laid in a good road bed of selected material; no grade to exceed 40 feet per mile, and no curve to limit speed, you will possess a thoroughfare of great capacity, and one which competition would only serve to strengthen.

This line of road is a portion of long extended line of railway, reaching from the Pennsylvania State line at Kinsman, on the east, to the Platte River, at its junction with the Missouri, on the west, full particulars of which have been given in our columns.

In another part of our colnmns will be found the report of the Indiana and Illinois portion of the same line. The whole presenting the longest and most direct *straight line* road in the world. A reference to our map will give a view of this line through Ohio, Indiana and Illinois.

The pecuniary affairs of these companies are in a healthy state, and the work upon them will progress steadily and rapidly.

TERRE HAUTE AND RICHMOND RAILROAD.

From authentic documents in our possession we give the following statistics of this road.

The termini are Indianapolis on the East, and Terre Haute on the West. Length 73 miles. Laid with T rail, 60 lbs to the yard. The company was incorporated in 1847. The first letting occurred Dec. 20th, 1848, and the road was opened for travel March, 1852.

The cost of 73 miles fully equipped was		$1,370,457 53
Or, per mile		18,499 42
The company own an interest in the Union Depot at Indianapolis, valued at		17,502 15
Capital Stock		737,350 00
Bonds 7 per cent		600,000 00
" 6 "		29,600 00
Receipts, 1852	$105,943 87	
Expenses, 1852	34,497 82	
Net profit		71,446 05
Receipts, 1853	$117,975 97	
Expenses and repairs	66,331 37	
Net profits		111,644 60
Dividend in 1852		4½ per cent
" July, 1853		3½ "
" Jan. 1824		4 "
Surplus, "		$28,705 03

To the foregoing items we should have been pleased to have added the *elements* of the road, viz: gauge, grade, curvature &c., all of which we hope to receive in good season.

From these statistics we see that this has been one of the best paying roads in the West, all circumstances being taken into consideration. Up to this present time, it has had no outlet on the West, nor any connections other than those of canals and stages. The completion of the Alton and Terre Haute road within another year, will add much to its travel and trafic, while the recent chartering of "Brough's road," from Terre Haute to St. Louis, with the certainty of its being constructed, will also tend to enhance the value of the stock of this company, already some 8 or 10 per cent. above par in the market.

FOX AND WISCONSIN IMPOVEMENT.

In one of our recent issues we asked for information relative to the Fox and Wisconsin River Improvement. The following has since been received, and we give it for the benefit of our readers:

REPORT OF THE DIRECTORS.

To the Stockholders of the Fox and Wisconsin Improvement Co:

The Directors herewith submit their first annual report of the condition and prospects of the Fox and Wisconsin River Improvement.

Immediately after the passage of act incorporating your company, and as preliminary to its taking effect, releases were procured from all the contractors, by paying them the amount of their claims against the State, which amounted to $28,934 75.

The subject next claiming the attention of the Board, was to devise means for commencing and carrying forward the work as rapidly as possible, and for that purpose, as also to take up all the evidences of indebtedness against the state, resolutions were passed authorizing a loan on the credit of the company and its property sufficient to accomplish the object in view. The extreme stringency of the money market and the discredit thrown upon the work the company had taken in hand, by the profligate manner in which its finances have heretofore been managed, proved serious impediments to the immediate negotiation of all the company desired. They have however, been thus far so fortunate as to secure and keep in operation a considerable force and to provide for a portion of the state indebtedness.

The Dredge Boat, which seems to be well adapted to the work for which it was intended, has been kept in operation during the whole season. The main channel of the upper Fox river can at present only be improved by cutting across the principal bends where they occur; and the work of the Dredge during the last summer has in this manner, effected a saving in distance, of some seven miles.

The amount of work done by the company since its organization, up to this date is, including expenses of Dredge, $24,956 18. Only a portion of the warrants and certificates of indebtedness issued by the board of Public Works, have yet been paid, in consequence of the inability of your directors to determine what were legitimate.

No record of cancelled warrants was furnished to the company; and the accounts for which warrants and certificates were issued were withheld by the Board of Public Works. The books received from the State Land Office presented a confused mass of entries, without any ledger or balance-sheet, exhibiting their contents in a condensed form; and it is only by running through these imperfect records, item by item, that an account can be made up showing what warrants have been issued. It is impossible, therefore, to prevent the perpetration of the grossest frauds, should such be attempted by the presentation for payment of warrants already once paid. Under these embarrassing circumstances, your Directors appointed a committee to investigate the matter and requested his Excellency, the late charter.* They were compelled to make this request, because it was the known desire of all the stockholders of the Company, that the conditions of their bonds to the State should be strictly complied with, and in a way satisfactory to the people of the State. The Governor, however, declined taking any action in the matter, under the plea, (whether correct or otherwise we deem it unnecessary to decide,) that it was a question in which the State had no interest. The committee of Directors have investigated the subject as fully as the imperfect records enable, and have reported to pay $87,695 63

Of which have been taken up and cancelled	64,875 75
Leaving a balance of	22,519 83
The committee also reported to disallow	6,141 30
The company has also paid for interest on the State stock certificates due January 1st, 1854	17,880,00

The Directors would further report that they believe arrangements have already been made by the Agents in New York to effect further sales of their Company Bonds, by which all the State liabilities now due will be discharged within the next ninety days. They will also be able to increase the force on the several parts of the lower Fox, so as to complete the navigable connection between Green Bay and lake Winnebago by next autumn

The Directors refer to a statement of the Treasurer for a full exhibit of the financial condition of the Company at the date of this report.

OTTO TANK,
EDGAR CONKLIN.
JOS. G. LAWTON,
Committee of Directors

Green Bay, Jan. 17, 1854.

*There is evidently an omission here in our copy, but of no moment apparently.

TO OUR PATRONS.—The second volume of the RECORD being now fairly under way, and our terms being "in advance," we enclose bills for the year, and trust that we shall find a ready response from our friends.

We have a very small number of complete copies of the first volume of the *Record*, handsomely bound, which we can supply to our subscribers as long as the supply holds out. We can also supply the back numbers, with two or three exceptions only, to such as may desire to complete their sets. In either case, an early application will be necessary.

ATLANTIC AND MISSISSIPPI RAILROAD.—From an Alton paper we learn that it is contemplated to test the legality of the recent charter granted to this company, known as "Brough's road," in the Courts of Illinois.—As Alton has ever been one of the strongest opponents of the charter, we look somewhat doubtingly on the information. The company has been chartered by the Legislature of the state, and we cannot understand what *legal* objection there can be to its construction.

FIRST REPORT
OF THE
PRESIDENT AND DIRECTORS,
Fort Wayne, Lacon, and Platte Valley Air-Line Railroad Company, to the Stockholders.

LACON, November 10th, 1853.

GENTLEMEN: The several Board of Directors of the above named Companies, most respectfully submit the following report:

The Fort Wayne and Mississippi Railroad Company, by virtue of articles of association filed in the Secretary of State's office, of Indiana, March 18th, 1853, in conformity with the general railroad bill of that State, dated May 11th, 1852, and the several amendments thereto, derives all the requisite rights, franchises, etc., necessary for the construction, equipping, maintaining and operating a railroad, from Fort Wayne, in said state, in a westerly direction to the eastern line in the State of Illinois.

The Western Air-Line Railroad Company, by virtue of a special act of the Legislature of Illinois, passed February 9th, 1853, derived similar powers for the construction of a railroad across the State of Illinois, from the town of New Boston, on the Mississippi river, to Lacon on the Illinois river; thence in the direction of Fort Wayne, Indiana, to the dividing line between Indiana and Illinois.

The Philadelphia, Fort Wayne and Platte River, Air-Line Railroad Company, by articles of association filed with the Secretary of State, for the State of Iowa, in the month of February, 1853, is fully empowered to construct a railway, from the Mississippi river opposite New Boston, through Wapello, to Council Bluffs City, in conformity with the several Acts of the State of Iowa.

The three companies thus incorporated, possess all the powers necessary for the construction and operation of a continuous railroad, about five hundred and eighty miles in length; and have by their board of directors, entered into a contract for the construction and common working of the whole, as a unit, and for perpetual consolidation, so far as consistent with the laws of the several states, through which the route will pass; thus forming a line of railway of great importance, (as it will be the shortest connection between the Missouri river, and the leading cities east of Indiana,) having for its terminus Fort Wayne, a place although isolated, and with but one outlet to market, the Wabash and Erie Canal, yet numbering sixty-five hundred inhabitants, well built up, and doing a large manufacturing and mercantile business; from where also will radiate the nine following railroads, viz:—the Fort Wayne and Toledo, running to Toledo on Lake Erie; the Ohio and Indiana, running to Pittsburgh and Philadelphia; the Cincinnati and Fort Wayne, running to Cincinnati; the Wabash Valley Railroad, in the direction of St. Louis; the Fort Wayne and Chicago, running to Chicago; the Fremont Road, connecting with Sandusky and Cleveland; the Fort Wayne and Tiffin, connecting the two latter lake ports, as well as with New York and Philadelphia; the Fort Wayne and Muncie, running in the direction of Louisville; and a road to the North, in the direction of Mackinaw; of which the five first named are far advanced in construction, and the remainder, with one exception, are all under contract, and their construction will no doubt be commenced early in the spring; which. with the canal connecting Lake Erie with the navigable waters of the Wabash, will concentrate at Fort Wayne a business that will undoubtedly make it a city second to none in the state, for all commercial or manufacturing purposes.—The western terminus will be the city of Council Bluffs, now numbering some twenty-five hundred inhabitants, although six years only have elapsed since its cite was the hunting-ground of the Red Man. If its local advantages have in that short period given it such a population, without even a well defined wagon road leading to it, you can readily imagine what its future will be, with its several projected railroads to the Mississippi, and the great Pacific Railroad, via South Pass to Astoria and San Francisco all completed, as well as the local traffic that it will afford. Intermediate are a number of flourishing towns of more or less importance, each calculated to be largely benefitted, and in return to add greatly to the local business of your road.

In its progress west from Fort Wayne, the line will intersect and connect with seven different railroads, all of which will be valuable tributaries, but in no wise competitors, as their general direction is nearly at right angles to your line, viz:—the Eel River, the Cincinnati and La Porte, the New Albany, Salem and New Buffalo, the Chicago branch of the Central Illinois, and the Central Military Tract Railroad. by means of which, connections will be had with all the important business places north and south of the line.—The three navigable rivers, Illinois, Mississippi and Missouri crossed, will also prove valuable tributaries, and aid materially in the economical construction of the road.

We would here call your attention to the report of the Chief Engineer hereto attached, from which you will perceive that the line passes over a country, unusually well adapted to the construction of a railroad, with a rich and fertile soil, and sufficiently populated to justify its construction, and contribute a local business of such character that it will be not only immediately profitable, but be immeasurably increased thereafter.

The Geological surveys and settlement of the country, have devoloped the fact that mineral products, indispensable to an agricultural and manufacturing population, abound in the immediate vicinity of the route. In Western Indiana, iron ore is found; in Illinois and Iowa, bituminous coal and hydraulic lime-stone, with also salt and gypsum in the latter. The article of coal being so essential to the inhabitants of a prairie country, its transportation will not only contribute largely to swell the receipts of the road, but insure a regular and permanent revenue.

By reference to the map of the road accompanying this report its importance will be at once realized, as also its relative position to the finished and most important projected roads, calculated to have an influence upon it either favorable or adverse. In Indiana, the Northern Indiana and Southern Michigan road lies at least forty miles to the north and nearly parallel to your road; and the Fort Wayne and Chicago, and the Wabash Valley roads, although starting at the common point, Fort Wayne, with your road, as they progress west, rapidly diverge; the former to the north, in the direction of Chicago, and the latter to the south, in the direction of Lafayette; consequently they accommodate entirely different localities and will in no wise interfere in the traffic of your road. In Illinois, the Rock Island road lies on an average, twenty-five miles to the north; and the projected Lafayette, Bloomington and Peoria road, more than that distance to the south, and the Peoria Galesburg and Burlington road some twenty miles to the south. In Iowa there are two other roads proposed to cross the state, one of which, the Northern, from Lyons to Iowa City, is in progress of construction, and will probably be extended from the latter place through Fort Des Moines to Council Bluffs. It is supposed that the company having it in charge will unite their road with yours, at some point near the eastern line of Adair county, as the interests of both companies would be materially advanced thereby.—Should it, however, be constructed through to the Missouri river on an independent line, it will not interfere with the local business of your road, as its average distance therefrom would be nearly twenty-four miles. The other route is to the south, commencing at Burlington, thence to Council Bluffs, either thro' the southern tier of counties of Iowa, or the tier immediately north. Should the second tier be adopted, a union with that interest and your road, would probably be effected, by which a common road bed would be constructed west of Madison county. This line would lie about as far south of your line as the former does north, and consequently it will not interfere locally. It is supposed that the interest of the Iowa section would be advanced by the construction of a branch road from Washington, through Muscatine to Davenport, to connect with the Rock Island and Chicago Railroad at that point.

From the above it will be seen that there is a belt of country between Fort Wayne and Council Bluff, averaging at least fifty miles in width, by about five hundred and eighty miles in length, with no railroad through it in the

direction of the great tide of traffic. In the center of this belt your road will lie, and the facilities that it will furnish, when completed, for carrying off the agricultural products, as well as for intercommunication and exchange of mineral and manufactured articles, will be such as to cause an influx of population and increase of products, that is unprecedented in the growth of any other section of our country, as it has the climate, soil, mineral products and proximity to market, and needs only your road to insure the thorough and complete development of its latent resources; and in return will richly reward you, by securing an enormous local business that can never be diverted as your road will perpetually afford the shortest and best possible route to the great water highways, and to the commercial cities of the East.

Another source of revenue will be from a large through traffic, that is destined for all time to come, to pass to and fro between the principal Atlantic seaports and the Mississippi and Pacific, and that, too, without detracting from that now accommodated by the present avenues, as its increase is fully equal to the general growth of the country, and could not be accommodated by the present roads even if desired, Nor is it necessary for their prosperity, as they are already reaping dividends that are in a high degree *remunerative** and are so crowded as to detract materially from the pleasure and convenience of the passengers.

The following table prepared from the census returns of 1850 indicates the resources of a belt of country twenty-five miles in width, from Fort Wayne to Council Bluffs City, having for its center your road, and may be taken as the territory which will perpetually contribute to its entire local business, embracing the following counties or parts of counties, viz: In Indiana, all of Allen, Whitley, Fulton, Pulaski and Jasper; one half Kosciusko, Wabash and Stark, and one quarter of Huntingdon, Miami, Marshall, Noble, White, Porter and Lake. In Illinois, all of Livingston, Marshall, Stark and Mercer; one half of Iroquois, Will, Putnam and Knox; one third of Henry, Warren and Henderson, and one quarter of Grundy, Lasalle, Woodford, Bureau, and Peoria. In Iowa, all of Louisa, Washington, Keokuk, Mahaska, Marion, Warren, Madison, Adair, Cass and Pottawattamie; one half Des Moines, and one quarter of Muscatine and Henry.

* The dividend of the Michigan Central for the year ending June first, 1852, was 14 per cent, and for the year following 8 per cent.; and that of the Southern Michigan and Northern Indiana, for the year ending July first, 1853, was 12 per cent.

Both roads could have made probably from one to two per cent. more, had it not been for the ruinous and unnecessary strife between them, which led to the employment of steamboats, and a host of entirely *unnecessary agencies*, besides lowering fares.

TABLE:

	Acres.	Population.	Pop. sq. mile.	Acres improv'd	Value of Farms and Implements.	Value of Live Stock.
Indiana.....	2,702,080	57,303	13,6	244,347	$7,251,647	$1,100.691
Illinois.....	3,517,440	53.157	9,7	358,817	7,215,307	1,698,686
Iowa.....	3,987,200	46,261	7,4	167,718	3,724,166	775,224
Aggregate ..	10,206,720	156,721	9,8	770,882	$18,191,120	$3,574,601

	Value of stock slaughtered.	Bushels Wheat, Rye, Barley and Buckwheat.	Bushels Corn and Oats.	Lbs. Wool.	Bushels Irish and sweet Potatoes.	Value of Orchard and Garden Produce.
Indiana.. ...	$197,660	609,269	2,127,529	101,009	174,647	$25,978
Illinois.....	414,159	858,172	4,531,740	189,148	167,760	31,909
Iowa	187,213	230,469	2,468,725	79,404	36,434	4,658
Aggregate...	$799,032	1,697.910	9.127.994	369,561	378,841	$62.545

	Lbs. Butter and Cheese.	Bush. Flax, Clover and Grass Seeds.	Tons Hay.	Lbs. Beeswax, Honey and Maple Sugar.	Gallons Maple Molasses.	Lbs. Flax.	Value of Home Manufactures.
Indiana.....	795,149	2,329	31,640	354,075	9,921	8,267	$54,114
Illinois.....	922,574	1,830	67,076	62,404	305	2,819	43,614
Iowa.....	464,343	569	8,905	79,073	315	16,356	47,178
Aggregate...	2,182,066	4,728	107,621	495,552	10,541	27,442	$144,906

From the foregoing it will be seen that only about one fourteenth of the territory is improved, and that the population averages less than ten souls per square mile. The value of the products of the labor of this sparse population is proof positive of the fertility of the soil, and will give a just appreciation of the necessity for the road, and of the ability of the country to sustain it.

The following is a close approximate to the same for the year ending June 30th, 1850.

Value of Live Stock.....	$3,574,601
Value of Slaughtered Stock.....	799,032
Value of Orchard Products.....	62,545
Value of Home Manufactures....	144,906
Value of 1,697,910 bush. Wheat, Rye, etc., at 50c.....	848,955
Value of 9,127,994 bush, Corn and Oats at 25c.....	2,281,998
Value of 369,561 lbs. Wool at 40c.	147,920
Value of 378,841 bush. Potatoes at 20c.....	75,768
Value of 2,182,066 lbs. Butter at 10c.	218,206
Value of 4,728 bush Grass Seeds at $2 00.....	9,456
Value of 107,621 Tons Hay at $5 00	538,105
Value of 495,552 lbs Honey and Sugar.....	49,555
Value of 10,541 Gallons Molasses at 50c.....	5,270
Value of 27,442 lbs. Flax at 25c....	6,860
Gross sum.....	*$8,763,171

To make the table and results applicable to the present year, the several items should be increased about sixty per cent.; or to the time of the completion of your road, from one hundred and fifty six to two hundred per cent.† By reference to the United States census, it will be seen that the agricultural products and population thereof, for an equal area of territory along either the Central or Southern Michigan and Northern Indiana and Rock Island roads, is but little or no greater than that of yours as above stated, consequently the earnings of your road with its through business will be fully equal to those of either of the above lines, and its stock and bonds furnish as certain, safe and reliable investment for capitalists as they do. It is needless here to enter into detailed calculations to estimate the probable receipts of the road, as the average earnings of the following roads will at least be realized, as they neither run through a more fertile country, or possess any particular merit which does not, or is not compensated by other considerations of greater importance.

	Gross Receipts.	*Per Mile*
Central Michigan, for last fiscal year.....	$1,153,660	$4,107
Southern Michigan and Northern Indiana.....	1,200,922	4,880
Ohio and Peunsylvania...	604,128	3,248
Mad River and Lake Erie.	540,518	3,250
Cleveland and Pittsburgh,	425,000	4,250
Madison and Indianapolis,	516,414	5.840
Galena and Chicago.....	473,548	6,570
Cleveland and Columbus..	777,793	5,761
Av'ge per mile of the 8 roads		$4,738

Assuming that your road will cost when finished $30,000 per mile, and that its receipts for the first year after completion will equal the average of those of the above roads, $4,738 per mile, of which there can be no doubt whatever, you would realize over 9 per cent. thereon after paying the expenses of working, and should one half the cost be realized from 7 per cent. mortgage bonds, then you could make, after paying interest and setting aside

*Exclusive of artizans work, as the census return does not show the value of the product of Factories, Shops, etc.

† The census returns show an increase of population for the ten years preceding 1850, Indiana forty-four per cent, Illinois seventy-nine per cent. and Iowa three hundred and forty-six per cent., or an average of one hundred and fifty-six per cent. There is every reason to suppose that the increase for the following ten years, will be equal if not greater, by reason of the early completion of many of the projected railroads in them, by which the immense prairies now in a state of nature will be made at once available for agriculture.

the proper sum for deterioration, a dividend on the stock of 11 per cent.

Owing to the peculiar physical features of the country lying between the Atlantic seaboard and the state of Ohio, as well as the position of the Lakes, the four great cities, Baltimore, Philadelphia, New York and Boston, in endeavoring to reach by means of artificial highways, the rich producing lands of the Western States, were compelled to penetrate Ohio, and at its eastern boundary are all within the space of one hundred and twenty miles—the most northern lying on the southern shore of Lake Erie, and the southern at Wheeling, Virginia, with a branch also to the Ohio River at Parkersburg, where all will connect with the various railway lines of Ohio, and through them reach all the principal commercial places of the Western States. The four arterial roads named will have direct connection with Fort Wayne, the most important of which will be the Clinton and Tiffin and Fort Wayne roads; by means of which your road will have an extension nearly due east across the state of Ohio, and be brought in direct connection with the four principal lines terminating at the seaports named—and with your line will form the shortest and best possible railway connection between Council Bluffs and either of those places, and it will consequently become the principal highway for a large portion of the traffic that is to pass between the two extremes of our country for all time to come.

The amount of subscriptions that have been pledged and secured up to this time, is about as follows:

In Indiana, in cash and Real Estate,. $500,000
In Illinois, in cash and County Bonds, 490,000
In Iowa, in cash and County Bonds. 1,000,000

Owing to the great extent of line and lack of facilities for intercommunication the several Boards have been unable finally to adjust the same, but they have little or no doubt of realizing not only the above sum, but of increasing it at least 50 per cent., which will, it is thought, give your road a local basis of the most unquestionable character and places its construction beyond all doubt.

The initiative steps have also been taken to secure an appropriation of lands from the General Government, and up to this time, we have no doubt of success, as your line is such that it possesses more of the elements of a national highway than any other, and it is believed that Congres will extend to it that helping hand which has ever characterized our republic when solicited by a work of equal national importance.

Parties are already in treaty for the construction of the entire road, and the Board feel confident that they will be able to effect an arrangement with one or more of them, who will be amply able to carry forward the work as rapidly as the money market and the means of the company will justify.

In behalf of the several Board of Directors,
E. GEST, President.

SELLERS' GRADE ENGINE.

In the construction of railways, two of the most prominent obstacles to be encountered are *Grades* and *Curves*, and it not unfrequently occurs that in mountainous districts the idea of railway communication is abandoned, only because the heavy excavations or tunnelling necessary to bring the grades of such roads within the tractive power of the ordinary engine, would not be warranted by the estimated traffic of the road when completed.

The subject of *grades* has occupied the attention of railroad men for a long time, and many attempts have been made to obviate the difficulty by means of inclined planes, and stationary and grade engines.

Of *Grade Engines* we have made mention in some of the recent numbers of the RECORD, and owe Mr. Sellers an apology, that, while speaking of them, we omitted to mention his very ingenious and valuable invention for this very purpose As we would not be unjust to our own citizens, and feeling anxious that Cincinnati should have all the credit for useful inventions that is her due, we subjoin a few remarks and extracts concerning the Grade Engine of Mr. Sellers, who has long been a resident of the Queen City, and is an old and experienced machinist.

The invention was first made known several years since, by means of a small working engine, and received the unqualified approbation of distinguished engineers and scientific men, and it was hoped that it would have paved the way for a road to California long ere this.

At the recommendation of Horatio Allen, Esq., and others, the Panama Railroad Company adopted this plan for overcoming the heavy grades on that road, and ordered three of the engines; but when completed, the Company, without a shadow of reason, broke their faith and contract, and would not receive the engines. Had they fulfilled their part of the contract, their Road would, unquestionably, have been in operation long ere this, and the Company have now been reaping a golden reward for their far-sightedness, instead of languishing incomplete, and dragging its slow length along at a snail's pace.

That such would have been the case, we honestly believe; and as a reason for our faith, we give the following extracts from the Report of the "Coal Run Improvement and Railroad Company" of Pennsylvania, as it appears in the *North American* of the 11th ult. The President, C. A. WALBORN, Esq., says:

"Before the commencement of the survey of our road, the Board had thought it probable that either an inclined plane or a switch back would have to be resorted to, in order to overcome the summit which divided the waters of the Susquehanna from those of the Delaware near the Catawissa stage road. They have, however, since adopted, at the suggestion of their Chief Engineer, a plan which obviates the necessity of employing either of these methods. This plan consists in the use of a locomotive on a new principle, devised by Mr. George Escol Sellers, an experienced builder of locomotives in Cincinnati. This engine is furnished with two horizontal rollers, worked by two separate cylinders, and which clasp a center rail in such a manner as to attain the adhesion requisite for the ascent of high grades. By means of an ingenious mode of attaching the train to the engine, the amount of adhesion is rendered self-adjustable to the resistance to be overcome on different grades, or under variable loads.

The feasibility of the plan has been amply demonstrated, not only by theory, but by complete and satisfactory experiments made with a small working engine, constructed for the purpose. These experiments were made in the presence of our Chief Engineer, on grades nearly twice as great as our proposed maximum, and resulted in a perfect conviction of the practical efficacy of the plan, and of its especial applicability to such roads as ours."

JNO. C. TRAUTWINE, Esq., a well known Civil Engineer, of Philadelphia, author of a valuable book on "Railroad Curves," and Engineer of this same road, and in this same Report, says:

"There is, I believe, but one point in the foregoing statement that requires a more especial notice than I have taken of it; and that is, the ascending grade of 150 feet per mile, from near Mount Carmel to the summit.

"The grade considerably exceeds the limits at which ordinary locomotives cease te be economically efficient, especially for heavy freight: and its introduction will consequently appear, at first sight, to be an unadvised measure on my part. I, however, confidently recommend it in this instance, in connection with the use of a locomotive constructed on a new principle, and invented by Mr. George Escol Sellers. Mr. Sellers has for nearly 20 years been engaged in the planning and construction of locomotives, and is, at this moment, at the head of that department in one of the most extensive establishments in Cincinnati.

"In his engine, adhesion is obtained, not by the *weight of the engine alone*, but by *pressure* produced by the load itself. This pressure is made to operate by the means of two horizontal adhesion wheels, or rollers, which act upon the opposite sides of a *center rail*. The force with which they press the rollers, is (by means of a most ingenious device,) made to adjust itself instantaneously to the varying resistance to be overcome, whether that resistance be modified by an increase, or diminution of load, or by change of grade.

"I have seen a small working engine, on Mr. Sellers' principle, ascend and descend a grade of 276 feet per mile, with the same loads that it could barely start on a level.* On this grade the engine was under the most perfect control of the enginemen. The experiments with this engine were witnessed, for some days in succession, not by myself only, but by several of the most eminent civil and mechanical engineers in the country: and all acquiesced, to the fullest exteut, in the well-merited encomiums bestowed upon it, and its really wonderful performances. I shall regard the practical application of this engine to the purposes of freight, as marking a new and most important era in the history of railroad locomotion; and I deem myself most fortunate in having met with a Board of Directors willing to repose in me the confidence necessary for effecting so desirable a consumation.

I cheerfully encounter the doubts of the unbelieving, in view of the prospective credit that must attach to the success of the measure.

"We shall have no difficulty in ascending our 150 feet grade with trains of the same weight as the ordinary engines will transport over the 35 feet grades of the roads with which we connect. The collateral advantages arising from diminished length of road, and the annual expenses of repairs thereof, constitute in themselves a powerful argument, felt with peculiar force in mountainous regions, where its introduction will dispense with the necessity of inclined planes, or of very circuitous routes for avoiding them.

"I am, very respectfully, yours, &c.,
"JOHN TRAUTWINE."

Philadelphia, Feb. 6, 1854.

*On the level there was no center rail; the engine worked with the ordinary drivers and the adhesion of its own weight only.

The remarks of Mr. Trautwine fully explain the principle upon which the engine acts much better than our pen, unskilled in the mysteries of mechanism, could do. We are rejoiced that the value of the invention is being justly appreciated, and hope that railroad companies will speedily avail themselves the immense advantages that a proper use of it will confer upon the counrry.

Fairbanks' New Track Scales.

To railroad companies and others interested, we commend the pernsal of the following, from the Chicago *Journal:*

We were yesterday afternoon indebted to the public attention of B. H. Chadborne, Esq., of 197 South Water st., agent for the Messrs. Fairbanks, for a full explanation of the principles involved in a track scale of novel construction, just erected at the freight depot of the Galena and Chicago Union Railroad Co., in this city. It had been proposed to introduce the ordinary depressed track scale, but the difficulty arising from the impossibility of excluding surface water presented objections which have been by this admirable piece of mechanism, completely surmounted. It may be properly termed a suspension track scale, and is briefly described as the ordinary platform suspended by eight iron rods an inch and a quarter in diameter, which passing up through the floor of the second story, are firmly attached to the under side of another platform resting upon the usual combination of levers, from which a rod returns to a lever immediately connected with the scale beams upon the lower floor. The weight of the wrought iron work is upwards of two tons; the full capacity of the scale is thirty tons, and yet so accurate is its adjustment, that a little towheaded urchin of twelve summers was weighed as a grocer would weigh a pound of candles, and a half grown porker that went scurrying across the platform, had its period of transit clearly indicated by the oscillations of the scale beam. We viewed this new application of the well known admirable principles of the Messrs. Fairbanks' scales, in all its *bearings*, and weighed the subject as carefully as our experience warranted, and could but foresee for it an extensive introduction wherever from the prevalence of similar difficulties to those existing here, an excavation may be deemed inexpedient. This is, we believe the first scale of the kind ever erected. The price, of course, exceeds that of the ordinary-track scale, the expense being about $1100,- while the usual cost of the former is from $500 to $600, but to answer the end for which they are designed, we can conceive of nothing more admirable or complete. As a curiosity it is well worth a visit from all who love to look upon the achievements of well directed skill and enterprise, while to those interested in such matters by their connection with railroad or other heavy freight business, it presents many claims for their examination, and we think entire adoption.

The Messrs. Fairbanks have appointed R. W. Booth & Co., hardware merchants, of our city, agents for the sale of their manufactures, particulars of which will appear in our columns as soon as the necessary cuts can be prepared.

FACTS FROM THE LAST CENSUS WORTHY OF NOTE.

Since the first census of the United States, in 1790, great changes have taken place in the relative position of the original "Thirteen" as well as that of the newer States since their entrance into the Confederacy. The *Wall Street Journal*, of New York, has an interesting article upon this subject, from which we gather the following table, from which it will be seen that 13 stood higher and 15 lower than when they started, Arkansas being the only State that has maintained its rank unchanged, though her position has been changed each ten years :

Risen	From.		Fallen	From.	
Pennsylvania,	3	2	Virginia,	1	4
New York,	5	1	Mass.,	2	6
Georgia,	12	9	N. Carolina	4	10
Kentucky	13	8	Maryland,	6	17
Tennessee,	16	5	S. Carolina	7	14
Ohio,	17	3	Connecticut,	8	21
Mississippi,	19	15	New Jersey,	9	19
Alabama,	19	12	N.Hamp're,	10	22
Indiana,	20	7	Vermont,	11	23
Missouri,	22	13	Rh. Island,	14	23
Illinois,	23	11	Delaware,	15	30
Michigan,	24	20	Maine,	12	16
Wisconsin,	30	24	Louisiana,	17	18
			Dis. of Col.	18	33
			Florida,	26	31

Texas, California, with Oregon, Utah, New Mexico and Minnesota Territories, are, of course, too young to enter into the comparison. There is material for a good deal of interesting and profitable study in the facts so vividly presenting the history of the States of the Union, from the beginning of their career to the present time.

EXCHANGES.—Though we regret to part company with any of our brethren of the the press, yet, as our exchange list has become unwieldy and beyond our power at present to fully avail ourselves of, we shall be constrained to contract it somewhat. Any of the papers with whom we have exchanged, who may not henceforth receive the RECORD, will understand the causc.

GROWTH OF XENIA.—The first house was built in Xenia on the 7th of April, 1804, just seventeen years after the settlement of the State at Marietta. A census has just been taken, which compares with those of 1840 and 1850 thus :—

In 1840	1,414	Inhabitants.
In 1846	2,300	"
In 1850	3,024	"
In 1853	4,248	"

The L. M. R. Road got into operation fully about 1845–6, since which time the town has doubled, and is now rapidly growing. The *Township* of Xenia is the largest in the State as to territory, and contains about 10,000 inhabitants.

FOREIGN IMMIGRATION.—The immigration in the last year (at the port of New York) is fifteen thousand less than the year previous. The principal places whence they come are as follows :—

Irish	113,164.
German	119,644.
English, Scotch and Welsh	34,764.
Swiss, French and Dutch	13,159.

A few Norwegians, Swdes, and Spaniards, make up the residue.

The Irish Exodus reached its hight in 1851, when no less than 163 256 reached this country! In 1853, the number was 50,000 less. While the Irish have diminished, the Germans have increased almost as much.

OHIO TOBACCO.—Ohio raised, in 1850, 10,- 454,459 lbs. tobacco. This was, most of it, raised in four or five counties in the east end of the State, viz :

Belmont	1,652,508 lbs.
Guernsey	1,738,131 "
Monroe	3,681,705 "
Washington	540,392 "

In the Western part of the State, the only large amount raised was in Brown, which was 1,279,510 lbs.

MONTGOMERY AND PENSACOLA RAILROAD.—The *Louisiana Courier* says that this road is now completely surveyed, and will soon be put under contract. The whole distance in Florida, 42 miles, consists of straight lines, with a few exceptions in ascending the hill at Pine Barren. The maximum grade is 24 feet to the mile. The remainder of the route through Alabama, is found very favorable.— The maximum grade, near Sparta, being 45 feet to the mile. The entire line only exceeds an air line by seven miles.

PIKE COUNTY RAILROAD, ILLINOIS.—In the last issue of the RECORD we said that application would be made at the present session of the Legislature of Illinois, for the passage of a charter for a road from Naples on the east, to the new town of Douglasville, on the Mississippi, opposite Hannibal, on the west, 53 miles long. The application was made and the charter granted. Thus another almost straight connection has been formed between the East and West, via the central roads of Ohio, Indiana and Illinois, and the Hannibal and St. Joseph, of Missouri.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

CORRECTED TO WEDNESDAY OF EACH WEEK.

Money rates 1½ @2 per cent. per month.

MONETARY.

The Money Market at the East is easy, with quick demand and a bouyant market. Call loans are easily made at 6 @ 7 per cent. Short paper, No. 1, 9 @ 10; longer paper at 10 @ 12; Railroad securities at 12 @ 18 per cent.

The Stock Market is bouyant, with an upward tendency, a decided improvement having taken place in all the sound dividend paying stocks.

We make the following selections from the sale at the STOCK BOARD of New York, for the week ending March —, 1854, viz:

Nor. Indiana Bonds, mor. on Goshen Line		92 00
" Stock		119 00

Foreign Exchange remains dull at 108 @ 109.

The balance in the U. S. Treasury, on March 1st, was $26,600,000.

At the West, in the latter part of last week, the demand for money became very urgent, so much so as to be, on Friday and Saturday, quite stringent. Since then it has become more plenty, but still less than the demand, with indications, however, of a continually growing ease.

Eastern Exchange remains at our last quotations, and dull.

In the Stock Market the transactions have been restricted as to quality, by the stringency in the Money Market though prices have been maintained, and in some instances, as the Central Ohio, for instance, materially advanced. For particulars of the stock transactions we refer to our quotations, where each lot is recorded as it was sold.

We notice the following dividends:

RAILROADS.

Cin. Ham. & Dayton, semi-annual	5 per cent.
Galena & Chicago, with surplus of $75,000	10 "
Madison & Indianapolis, in 6 per cent. scrip at 3 years	8 "

Land Warrants are extremely scarce, and worth $189 a $190. Shares in proportion.

We observe that A. H. Nicolay has commenced legal proceedings against J Thompson, Banker, of New York for remarks made, relative to himself, in the Reporter. To those desirous of testing the New York market with stock securities for sale, we commend Mr. Nicolay *on the old* plan of selling, or to those preferring the *new plan* we would commend Messrs. A. H. Muller & Co., whose card will be found in our advertising columns.

We notice that the Directors of the Marietta and Hillsboro' Railroad Companies, met at the Burnet House last evening, to decide upon the contract of union for the two roads. The proceedings had not transpired when we went to press.

Agriculture.

COTTON-SEED OIL---ITS VALUE.

We find an article in the New Orleans *Delta* from the pen of Dr. Edward Zenner Coxe, upon this subject. It is customary to throw away the entire seed of the cotton crop, as useless. Dr. Coxe shows conclusively, that in so doing, the planters throw away what they might make worth to themselves more than $48,000,000, by manufacturing from the seed, oil, soap &c.

"The conclusive proof of this assertion," says Dr Coxe, 'will be found in the following statement furnished by Mr. Woodall, which corresponds with those made by Mr. W. P. Converse and myself:

The cotton crop of the United States.....	3,000,000 bales
At an average weight per bale of 400 lbs., will yield of Ginned Cotton.....	1,200,000,000 lbs.
To each pound of cotton, there are of seed 3 lbs., giving....	3,600,000,000 "
Retained for planting purposes one-half, making.....	1,800,000,000 "
Leaving for manufacturing purposes, oil, soap &c.....	1,800,000,000 "

Now, 100 lbs. of cotton-seed will produce 2 gallons of oil, 48 lbs. of oil cake and 6¼ lbs. of soap stock; which last, with additional ingredients, of small value pecuniarily, will make 20 lbs of soap. Consequently, 1,800-000,000 lbs of cotton-seed will yield 36,000,-000 gallons of oil, 864,000,000 lbs. of oil-cake, 106,000,000 lbs. of soap stock; which, at the lowest estimate, will produce

36,000,000 gallons of oil at 75 cts..	$27,000,000
864,000,000 lbs. oil cake at 1 ct.....	8,640,000
106,000,000 lbs. soap stock at 3 cts..	3,180,000
Total estimated value.....	$38,820,000

$58,000,000; or suppose that one-third be deducted to satisfy skeptics, the gross amount of $25,000,000 is by far to great a loss to the community, not to demand some efforts to reclaim it.

"In reference to the soap made from cotton-oil, it is in all respects, equal to any, whether imported or of domestic production. It makes a good lather, softens the skin, is good to shave with, and with time and practical experience, this soap will not, nor does it now suffer by comparison with the best of Guerlain, Low or others of note.

As regards the oil, for dietetic or medicinal purposes, few could detect, if unapprised of its source, which I have practically proved, the least difference between the far famed olive oil of Italy. Eaten with salad or rice, it has, to all intents and purposes, the same flavor and taste as are given by the best productions of Plaignol. Avigdor or Sue.

To the politeness of the proprietors of the cotton-oil manufactory in New Orleans, corner of Girod and Circus streets, Messrs. Wilbur & Co., I was indebted for an agreeable hour passed in examining the productions from cotton seed, and certainly too much praise cannot be awarded to gentlemen who have devoted many years of toil, and gone to heavy expenses, in bringing this important subject to its present state of perfection.—Who will not say that they and particularly Mr. Wilber, who is the patentee of the great improvements in the machinery required for the purpose, deserve richly the most unbounded success? can it be doubted, in view of the facts disclosed that capitalists will be ready and willing to lend their aid in furtherance of such ends, in case their assistance should be called for?

Possibly it is well to observe, that this oil will burn quite as well as the best sperm or lard oil.

The fact that candles can be made out of this oil has not been practically proved, but there is a strong foreshadowing that such will shortly be announced."

These results of Dr. Coxe, if they can be relied on, are truly astonishing. Of course every thing depends upon the correctness of his data. That oil can be manufactured from cotton-seed in large quantities, there can be no doubt; and that the oil is of great value we are equally certain. The only question to be tested is whether the cost of manufacture will be sufficiently low to place the oil in fair competition with other oils. We hope the experiment will be tried, for the purpose of settling the question—a question which involves millions of dollars.

ACKOWLEDGEMENTS.

Railroad to the Pacific; Northern Route. Its general char·cter, relative merits, etc., by Edward F. Johnston, C. E.

We are indebted to the author for a copy of the above work, second edition, containing maps, engravings, etc., with descriptions, and comparisons of various routes, climate, soil and productions. We have not had time to examine it, but as the subject will occupy public attention for some time, we commend it to all interested.

The Western Journal and Civilian, Vol. XI., No. 4, for January, is at hand, containing an unusual amount of valuable statistical information.

DeBow's Review, Industrial Resources, etc., for February, is at hand filled with its usual quantum of information, concerning the industrial resources of the Union.

The Odd Fellows' Literary Casket.—We are indebted to the Publishers, Messrs. Tidball & Turner, for the numbers of this valuable magazine. It is not as its name would indicate, devoted entirely to the interests of the order, but is fitted expressly for family reading. It is issued monthly. Terms $2 00 per annum.

We have also received the "*First annual Report of the Clinton Line Railroad Company*, showing the undertaking to be a most valuable one, and in a very prosperous and promising state.

Memoranda on Statistics. — Silver — where does it go? In the year 1853, according to a statement by Mr. Law, there was shipped from England, to India and China, $31,405,000 in silver! This is hoarded in the treasuries of India and China. Such a drain as this is quite sufficient to account for the scarcity of silver coin.

Newport and Eminence Railroad.—The Legislature of Kentucky has passed a bill chartering the above named company, also the Louisville and Memphis Railroad Company.

Advertisements.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our Railroad Map, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the City of Cincinnati. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.

OFFICE—No. 2 Pine street, cor. of Broadway, New York, } Metropolitan Bank Buildings.

NOTICE TO CONTRACTORS.

PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrensburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.

The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.

THOS. ALLEN, President.
Thos. S. O'Sullivan, Chief Engineer.
Pacific Railroad Office, }

NOTICE TO CONTRACTORS.

OFFICE PITTSBURGH AND CONNELSVILLE RAILROAD COMPANY,

SEALED Proposals will be received at the Office of this Company, at Neville Hall, in the city of Pittsburgh, until 5 o'clock, P. M. of WEDNESDAY, the 22d day of March next, for the Gradnation and Masonry of that part of the Pittsburgh and Connelsville Railroad extending from West Newton, in Westmoreland county, to Connelsville in Fayette county, this State, a distance of 25 miles. This work is generally of a very light character. It will be divided into sections of about one mile each. Proposals will be received for one or more sections.

Proposals will also be received until the same time for the making of the Tunnel at the Sand Patch Summit, on the Allegheny Mountains, about 25 miles from Cumberland. This Tunnel is to be forty-one hundred feet in length, through rock.—The work is worthy the attention of the best contractors. It is in an excellent region to do work cheaply.

Maps, Profiles and Specifications will be ready for the examination of bidders on and after the 6th day of March next, and all proper information given on on application to Oliver W. Barnes, Chief Engineer, or the Assistant Engineers on the line.

Satisfactory testimonials will be expected from Contractors not known to the Company. By order of the Board.

W. LARIMEE, JR., President,

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimens of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S
PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted:—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

SIR:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION; as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY.

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ½ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,-10 casks, assorted weights, now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass, assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with east steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co 's C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft.

Cross Cut Saws.—Hoe & Co.'s C. S., John ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet. Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
apr 3 140 and 142 Main street.

PHILADELPHIA

Type and Stereotype Foundry.

NEW BOOK OF

Specimens of Printing Types,

PLAIN AND ORNAMENTAL;

RULES, BORDERS, WOOD CUTS, &c., &c.

THE attention of the printing craft and the literary public is respectfully invited to the Minor Book of Specimens of Printing Types, &c., just published by us. The critical eye will at once perceive that it surpasses every work of a similar kind before issued in America, and that it fairly enters into competition with the finest productions of Europe. Everything shown in this book, excepting Wood Type, is actually manufactured by us in our own Foundry, and may be relied upon as being finished in a workmanlike style.

Among its contents, we beg to draw attention to the specimen of our LABOR-SAVING RULES. The economic printer will soon learn to appreciate their valuable qualities, and will be unwilling to dispense with the assistance they afford in the various kinds of Rule work.

THE CALLIGRAPHIC SCRIPTS

Form a new and beautiful variety of Type; and, with the

SCRIBE TEXTS, THE ARABESQUES,

THE COMPOSITES,

THE CHROMATIC TYPES AND BORDERS,

And a large variety of ORNAMENTAL LETTERS exhibited, give peculiar advantages to the tasteful workman in the production of chaste and ornate printing.

The display of plain and substantial Type of the Roman character is extensive. The Scotch faces have lost none of their value and attractiveness of appearance, and are continually growing in he esteem of competent judges of good Typography.

The MUSIC will be found to be unequalled by any manufactured in this country, and not surpassed by any in the world.

The assortment of CUTS is large and various, many of which are furnished in copper at no greater cost than if in type metal, and yet are much more durable: and an Alphabetical Index is given, by which any Cut made by us may be easily found.

The prices of Type are as follow:

Pica at.....	30 cents.	Minion at.....	48 cents.
Small Pica.....	32 "	Nonpareil	58 "
Long Primer.....	34 "	Agate.....	72 "
Bourgeois.....	37 "	Pearl.....	1 08 "
Brevier.....	42 "	Diamond.....	1 60 "

Printing Presses, Standing Presses, Cases, Stands, Chases, Galleys, Printing Ink, and every article used in a Printing Office, constantly on hand, at the lowest rates.

Second-hand Presses, and Type used only in Stereotyping, at reduced prices.

Books, Pamphlets, Music, Labels, Wood Cuts, &c., Stereotyped or Electrotyped in copper, with correctness and despatch.

We are also agents for the sale of HOE'S, ADAMS', RUGGLES' and NORTHRUP'S PRESSES, and are prepared to furnish them promptly and at manufacturers' prices.

☞ Our SPECIMEN BOOK will be forwarded gratuitously to Printers who give us directions how to send it. If by mail, sixty cents in Post Office Stamps should be remitted to us to prepay the postage. The bound edition, however, is too bulky to go in the mails, and it will be necessary in ordering one of these to designate whether it is to be sent by express or otherwise.

L. JOHNSON & Co.,
†oc27 No. 6 Sansom street, Philadelphia.

CINCINNATI TYPE FOUNDRY.

AND

PRINTER'S WAREHOUSE.

L. T. WELLS, Agent.

THIS establishment is prepared to furnish printing materials of every description. We are constantly adding new styles of

PLAIN AND FANCY JOB TYPE.

Our new Scotch Face Type will be found well adapted for book and newspaper work.

The Washington Press, with our new Inking apparatus, as now made by us, will be found the most complete machine for printers ever made. Machine, and Hand Job Presses, Embossing Presses, and Card Printing Machines of several kinds, etc. etc.

Printers, by giving a description of the kind of work to be done, can be furnished with estimate of cost; and those wishing to make purchases at this establishment can have a specimen book sent them, by giving directions how it shall be sent. When sent by mail, postage-stamps to the amount of 62½ cents should be sent by letter or otherwise. If not pre-paid, the postage will be double that amount †mr3

Fort Wayne and Southern Railroad.—The council of the city of Jeffersonville have authorized the issue of their bonds to the amount of $200,000, as a subscription towards the building of the Fort Wayne Railroad.

MONETARY CONDITION OF THE UNITED STATES—AMOUNT OF CURRENCY.

In the first number of the Record, (March 3d, 1853,) we gave a statistical review of coin and currency in this country. The result was, that in January, 1853, the amount of money in proportion to the people was greater than it ever had been; that the amount of coin was much greater, and that the proportion of coin to paper was very much greater. There was then, in round numbers, *three hundred millions* in coin and paper, which was twelve dollars to each person. That the proportion between coin and paper at different periods may be clearly seen, we repeat a table of proportions at different periods, deducting from the total amount of coin, the coin in banks:

Years.	Bank Notes.	Coin.	Proportion.
1816	$87,500,000	$7,500,000	11½ to 1
1830	60,000,000	10,000,000	6 to 1
1836	120,000,000	28,000,000	4½ to 1
1853	153,958,358	141,498,899	1⅛ to 1

Here we observe a very remarkable fact, the steady and rapid increase of coin, in proportion to paper. At the close of the war in 1815, there were *twelve* paper dollars to each metal dollar; in 1836, (the period of most rapid expansion of prices,) there were still *four* to one; but in 1853, there was almost dollar for dollar in coin. The greater safety to the people, as to the solvency of bank notes is obvious. There is now no danger whatever from the want of coin, and consequently *cannot* be a suspension of specie payments. An occasional failure of small banks there may be, as in every other mercantile business; but such failure can only be the consequence of fraud, or the greatest mismanagement.

To ascertain the condition of the currency, coin, and credits of 1854, we have only to include the transactions of 1853, in our former aggregate.

At the close of 1852, there were in the United States, of coin, $204,982,435. Now, to ascertain what it was on 1st January, 1854, we must add to this the balance, after deducting the exports from the receipts. The coinage of California Gold for 1853 was:

Gold coined at Philadelphia,	$53,426,205
" " New Orleans,	2,152,254
" " Dahlonega,	452,289
Total,	$56,030,748

About $2,000,000 may be deducted from this, as foreign gold, leaving in round numbers, $54,000,000, added to the coin of the country, from American gold. The *exports* of specie for the last Treasury year (ending, July 1, 1853,) was $27,486,878, from which must be deducted about $4,000,000 imports, so that the *balance* of exported specie for the current year was $23,500,000. Bringing the year down to Jan. 1, 1854, would not vary materially the result. We have then, for the commencement of 1853, this result:

Received American Gold,	$54,000,000
Exported,	23,500,000
Gain,	$30,500,000
Coin at the close of 1852,	$204,982,435
Gain in 1853,	30,500,000
Coin Jan. 1, 1854	$235,482,435

2. Of Bank Notes: The issue of bank notes in the different states, as near the first of January, 1854, as we could ascertain it, was as follows, most of the returns being official, especially in the states issueing the largest amounts:

	Bank Notes.	Coin in hand.
Massachusetts,	$30,402,502	$3,731,764
Connecticut,	11,700,945	1,015,839
Rbode Island,	4,895,599	359,699
Maine,	2,136,396	388,219
Vermont,	4,794,819	1,188,548
New Hampshire,	2,950,665	180,000
New York,	32,427,022	14,149,767
New Jersey,	4,282,006	1,032,000
Pennsylvania,	17,411,970	7,774,700
Virginia,	12,020,373	3,566,000
Maryland,	2,957,532	2,768,708
Kentucky,	8,889,101	3,200,000
Tennessee,	3,913,491	1,143,919
Missouri,	2,487,530	937,835
Ohio,	10,717,380	2,356,451
Indiana,	3,949,280	1,377,804
Illinois,	1,351,788	419,531
Michigan	884,000	2,66800
Wisconsin,	578,721	182,282
North Carolina,	3,415,788	1,410,254
South Carolina,	5,071,564	1,151,774
Georgia,	4,118,419	1,547,626
Alabama,	1,739,646	1,045,533
Louisiana,	5,902,085	7,128,380
Delaware,	651,121	147,612
Aggregate,	$189,657,741	$58,051 085

We find from this, that there are at the present time, in the United States, *one hundred and ninety millions* of dollars in paper money, and about one-third that amount retained for its redemption. Now, by taking the aggregate of coin and paper, and *deducting* from from this the amount of coin retained by the

banks, we shall have the absolute amount of *circulation*. The amount in the sub-treasuries and the amount of bank notes on hand, are neither of them to be fairly deducted, because they are held, like all money, only for the moment, whereas the specie *in the banks* is nearly a constant quantity, never diminishing.

Coin in the United States,	$255,482,435
Bank notes issued, - -	189,657,741
Aggregate, - - - -	$425,140,176
Deduct coin in banks, - -	58,051,085
Total circulation, - -	$367,089,091
Aggregate of coin and bank notes Jan. 1, 1853	$358,940,773
Aggregate of coin and bank notes Jan. 1, 1854,	425,140,176
Increase in 1853, - - -	$66,199,383
Increase of coin, - - - -	30,500,000
Increase of bank notes, - -	35,699,383

The actual increase is doubtless considerably greater, for the returns from Maine, North Carolina, Georgia, Tennessee and Kentucky, are not the latest date, and in some of these states the circulation has increased very rapidly. The total amount of coin and paper is now, in proportion to the whole number of people, as 16 to 1, and the amount of *active* circulation, as 13 to 1. The amount of coin is greater than the amount of paper, so that every dollar of paper money could be redeemed in one day, if the banks chose to call in their debts.

This country has in the last year presented the most extraordinary financial spectacle ever exhibited. There has been a cry of scarcity, a constant demand for money, very high rates of interest, and all this in face of *rapidly increasing currency, of undoubted solvency*, of an accumulation of wealth equally rapid, of a condition of trade and commerce exceedingly prosperous, with, in one word, a condition of high commercial health. To comprehend the cause of this, one must be fully acquainted with the fundamental laws of commerce. One of them, is that what is called the plenty, a scarcity of money does not depend on the *amount* of money in a community, nor upon its rapid increase, but upon the *relation which that amount bears to the demand for it.* Then the *amount* of money, as we see above is rapidly *increasing*; but so is the demand increasing. Now which of these increases the faster? In 1853, particularly the first eight months, the demand for the use of money increased faster than the amount of money increased, though the last was rapid enough.—But some one may say, how is it possible that a community continually increasing in capital and positive wealth, can need so much more money? Precisely because of its prosperity. All, or nearly all kinds of business are profitable; hence every one wishes to enlarge his business, or enter upon new enterprizes. The great number of new railways is one example of this, but only one. All kinds of new manufactures, new improvements, new voyages, and new enterprizes of all descriptions, are entered upon. Every one has a new scheme. In the midst of this, society becomes extravagant, and luxurious; costly houses are built, rich furniture bought, servants are multiplied, balls, parties and amusements are indulged in; diamonds become common where they were before unknown; and jeweled fingers are displayed by the elegant lady and the fashionable gentleman. All these things require great supplies of money, and there is a constant demand for it at high rates of interest. The answer to this demand is a multiplication of banks and bankers. The paper circulation is now one hundred and ninety millions, and in the coming year will probably be increased thirty millions more. Whence is this paper money supplied? The answer to this question is an instructive one. The *West* is the great consumer of paper money, and the Northern states the producers. Take equal population, North and West, and let us see how they compare in bank paper. The population of the Northern and Western states, is about equal to that of New York, Massachusetts and Connecticnt.

Bank notes of New York Mass. and Conn.,	$73,000,000
Bank notes of Ohio, Indiana, Illinois, Michigan and Wisconsin,	$17,000,000

Now these sections use bank notes in about equal proportions. The result is, that New York, Massachusetts and Connecticut *manufacture* twenty-eight million of dollars in bank notes, for the consumption of the West.—There are at least *one hundred* banks in these states whose circulation is used in the West to a great extent. The practice is to loan this manufactured paper to bankers, railroad companies, etc., in the West, at low rates of interest, on condition that their notes shall be *protected*, in which case the interest is clear gain to the bank. Again, a banker or railroad contractor here, is made an agent for the bank which really transacts its main business here. In Connecticut, there are nearly two millions in bank notes, regularly entered at the banks as *protected* notes. But the same thing in other forms, is done in all the Northern states. In the North-west, money has been so scarce that this *artifice* has been a very useful one. But what must we think in such a state of things, of a policy which really makes war on capital and on bank notes?—Such, to a certain extent, is the excessive taxation of Ohio. The true policy undoubtedly is to make our own bank notes plenty, and thus make for ourselves the profits we give to other states. There are thirty-one states in the Union, and the movements of commerce between them, and the abundance and scarcity of money, will depend in no small degree upon the *relative* burdens placed upon banks and commerce by taxation. Our readers will remember how firmly we insisted in the last autumn and winter, that no commercial convulsion *could* occur in in this country, when solid capital and real money were so rapidly increasing, and that in spite of the efforts of some to produce a panic, and the fears of others, nothing more than a salutary stricture of the money market could possibly occur. Our view has been completely realized. Real money is plenty; the alarm is nearly over; the exports are enormous; the war in Europe will be beneficial to American commerce, and no prudent move, or good enterprise has anything to fear, from the condition of the monied world.

Railroads.

CINCINNATI & FORT WAYNE, AND FOUR MILE VALLEY RAILROAD COMPANIES.

We are in receipt of the JOINT REPORT of these two companies, consolidated under one management, for the past year. We gather the following facts from the President's Report. The Cincinnati and Fort Wayne company was organized Feb. 24, 1854, under the general Railroad Law of Indiana. The Four Mile Valley company was organized March 14 1851, under a special charter from the State of Ohio, dated March 12, 1849

These two companies were consolidated as far as possible under the law of Ohio, March 11, 1853.

The road was let to contract June 22, 1853, to be completed within two years and seven months from that date. The contract embraces, main track, 137½ miles; side track, 13½ miles, with a tunnel near Rossville, of 2,900 feet, and arched approaches 1,000 feet.

The contractors are to fully equip the road, and finish it in all respects, a first class road, for $4,500,000. In payments as follows:

Cash	$1,000,000
Stock of the Co. at par	1,000,000
Convertible Bonds of the Co., payable in 20 years, with 7 per cent. interest	2,500,000

Monthly estimates as follows:

In cash	Two ninths.
" stock	Two ninths.
" bonds	Five ninths.

The available means of the company are as follows:

Subscription	$ 500,000
Stock taken by contractors	1.000,000
Bonds, 20 years, at 7 per cent, taken by contractors	2,500,000
Leaving to be made up by additional subscription	500,000
	$4,500,000

The subscriptions already made are not all in cash, portions are payable iu property, lying near the line of the road, or other roads, where they will be benefitted by the improvements. The lands were taken at prices varying from five dollars per acre, for unimproved, to twenty and twenty-five dollars for improved lands.

To accomplish the immediate construction of the line, it was resolved to mortgage these lands for the payment of convertible bonds at 8 and 10 years, bearing 8 per cent. interest, the proceeds to be used in meeting the cash payments in the construction of the road.—In accordance with these resolutions, $300-,000 in the bonds of each of these companies were issued and placed in the hands of the President, who is also the financial agent of the company.

The report goes on to show the value of the line and its numerous connections, and the certainty of its being a remunerative investment to all parties concerned.

We gather the following *elements* from the Engineer's Report:

Total length of road	149 miles.
" curvature	1480°

as follows:

Straight	198,897 feet,
11,460 feet radius	3.300 "
5.730 " "	36.222 "
3.820 " "	17.050 "
2.865 " "	13.705 "
1.910 " "	14.450 "
1.432 " "	3.150 "

Grades, as follows:

Level	33.96 miles.
11 feet and under	25.1-4 "
11 to 22 feet	35.1-4 "
22 to 32 feet	30.1-2 "
32 to 39 6-10 feet	24.1-4 "

The heaviest portion of the work is from Hamilton to Richmond, a distance of 36 miles, including a bridge across the Miami, and the tunnel back of Rossville. From Cincinnati to Hamilton, whether the Short Line road be used to Sharon, or an independent line via Mill Creek, the grade is light and the curves unobjectionable. From Richmond to Fort Wayne, 87 miles, there are no obstructions of any moment. Taken as a whole, from Sharon to Fort Wayne, 137 miles, the line is easy of construction, and if finished as surveyed, and defined by terms of contract, will be unsurpassed either in alignments, grades or appointments, and unrivaled for rapid, easy and ecouomical working.

At the meeting, 22d ult., the following directors were elected for the Fort Wayne and Cincinnati company, viz: P. P. Bailey, R. E. Fleming, C. E. Sturges, Samuel Decker, Anthony Pitman, John Neff, Jr., Geo. W. Monks, A. Stone, M. Hollingsworth. P. P. Bailey, President; A. Stone, Vice President, R. E. Fleming, Secretary and Treasurer.

The election for directors and officers of the Four Mile Valley company, was held at Fair Haven, and resulted, as we learn in the re-election of the old board. We are pleased to see this unanimity, as it is evidence that the course of the energetic board was satisfactory to the stockholders, and that the original course marked out for the road, as well as plan for construction, will be continued.

We also learn that instructions will be given in a few days to the contractors to commence operations in the vicinity of the Indiana State Line, sonth of Richmond, where the heaviest portion of the work of the line is.

EAST TENNESSEE AND GEORGIA RAILROAD.

ANNUAL RPORT.

From the President's Report, C. Wallace, Esq., we glean as follows:

The road has been running from Dalton, Ga., to Loudon, Tenn., a distance of 82 miles only.

The gross earnings for the year ending Nov. 1853, were	$93,975 13
Expenses,	42,321 91
Profit	$51,653 22

The cost of the 82 miles run, and upon which the above amount was earned is, in round numbers, $1,500,000, yielding an increase of about 3½ per cent. Running expenses, 45 per cent. of receipts, a very low estimate for new and incomplete roads.

Some difficulty had been experienced with the original contractor for building the bridge across the Tennessee River; settlement has been made with him, and a contract made with new parties. Iron has been procured, debt due the company from the State under the law of '52 collected, the floating debt of the company liquidated in part, and the remainder put in a way for rapid liquidation, the unlet work north of the Tennessee River has been put under contract, and the delinquent subscribers to the stock have been stimulated to a better effort to meet the calls of the company.

The report embraces much matter relative to the value of the road, the productions of the country along its line, its business present and prospective connections, etc., which tends to impress us favorably as to the future of the company.

From M. B. Prichard's Report, (the chief engineer,) we gather the following, relative to the extension of the road from Loudon to Knoxville:

Cost of Tennessee bridge, with approaches, etc.,	$127,652 50	
Grading and Masonry, 29 miles.	200,832 00	
Iron rails, 3150 tons	211,050 00	
Spikes and Chairs, 150 tons	115,000 00	
Cross Ties, 70,000	14,000 00	
Track laying	12,600 00	
Depots and water stations	25,000 00	
Superintendance and Contin.	18,865 50	
Total	$625,000 00	
To meet this the company have		
State Loans for bridge,	$100,000	
Premium on do	7,000	
State loan for iron	226,050	333,050.00
Remainder already paid, or to be provided for	$291,950 00	
Of which there has been paid	$72,405 56	
Uncollected stock, including company subs.	135,000 00	
Stock taken by contractors.	6,000 00	
Bonds	8,000 00	221,405 56
Loaing to be provided	$70,514,44	

The State loan for iron and equipment is	$240,000 00
Premium on do	16,800 00
Total	$256,800 00
The cost of iron is	226,050 00
Leaving for equipment	$30,750 00*

The length of the road is as follows:

Dalton, Ga., to Loudon	82 miles.
Loudon to Knoxville	39 "
Total	111

Of this 15 miles are in Georgia, and 96 in Tenn. 60 miles are graded for double track, the remainder is 18 to 20 feet wide, in cuts, and 14 to 16 feet in embankments. The maximum grade is 36 feet to mile, but in no instance continues at that for two miles. The curvature varies from 2,865 to to 10,000 feet. Curves of 1,901 and 2,865 feet, 3 and 4 degrees, have been used in a few instances, on light grades. Proportion of straight and curved lines is about 8 to 1. Gauge 5 feet; Total length of bridging 2,194 feet; Rails 100 tons to the mile; ties 8 inches thick, 8 to 15 inches wide, 2½ feet apart, from center to center.

A regular force of 750 men is now constantly employed; the grading is confidently expected to be completed by May next. The delivery of the iron at Savannah and Charleston, will commence in April and continue through May and June; the style is the inverted ⊥—the requirements of the State law making it imperative to use that style or the inverted ⊓.

The Loudon *Free Press* speaks in high terms of the increasing business of this road and says:

"The fondest anticipations ever indulged in regard to this road, are already beginning to be realized. Freights are offering with unprecedented activity, limited only by the capacity of the road, to transport. We are pleased to state in this connection, that Mr. Palmer, Superintendant of Motive Power, has been directed to proceed North, for the of purpose of purchasing an additional number of locomotives, and Major Jackson is now negotiating the purchase of 200 more freight cars. So it will be seen the company are not pursuing a penny-wise pound-foolish policy."

*Sinee the above estimate the *state aid* has been inereased to $10,000 per mile, which will make the amount $300,000 00
Premium 21,000 00
Total, 321,000 00
Less iron 226,050 00
Leaviag for equipments $94,950 00

MARIETTA AND HILLSBORO' RAILROADS.—At a meeting of the Directors of these two Companies, held in this city on the 8th inst., the "Contract of Union," as published by us some time since, was formally accepted, and the two Companies thus united under one management. Mr. Trimble resigned the Presidency of the Hillsboro' Company and entered a protost against tho proceedings.

NEW YORK RAILROADS—ANNUAL REPORT.

In the first No. of the present Volume we gave a small portion of the present Report; but as it embraces so much of the *elements* of railroad economy, and is so valuable for reference, we give it now entire.

Mr. McAlpine deserves the thanks of the Railroad community for his lucid Report, which bears the unmistakable evidence of laborious research and intimate acquaintance with the subject:

ANNUAL REPORT OF THE STATE ENGINEER.

The following is the Annual Report of the State Engineer on the Railroads of the State of New York for 1853:

	Miles.
The length of all the railroads in operation in the State is	2,433
The length of railroads laid is about	2,497
The length of double track in addition to the above is	664
The number of locomotives in use is	586
The number of passenger cars in use is	834
The number of baggage and freight cars in use is	6,895
The number of miles run by the passenger trains is about	6,594,963
The number of miles run by the freight trains is about	4,227,807
Total number of miles run	10,822,770
The whole number of miles travelled by the passengers is about	531,572,298
The whole number of miles each ton of freight was moved, or the number of tons moved one mile is about	246,554,492
The capital stock of which is about	$112,038,131 45
The capital stock paid in is about	61,238,829 32
The am'nt of funded and floating debt is about	59,669, 478 38
The amount paid for construction and equipments is	117,707,620 58

The average distance which each passenger traveled would appear, from the footing of the reports, to be 44½ miles, and the average distance which each ton of freight was moved, would appear to be 65½ miles. But these average distances should be slightly increased, in consequence of a portion of the passengers and freight being carried over two or more roads, and the number of passengers and tons of freight being in those cases repeated on each road.

Twenty-three railroad corporations have made full reports, from which the following statements were made:

The length of railroads is	2,103 miles,
The capital stock, as per charter	$54,748,800,00
" " subscribed	50,137,263,03
" " paid in	47,430,865,04
The amount of funded debt is	43,346,781,27
" " floating debt is	7,111,590,64
Amount expended in grading and bridging	35,457,962,75
Amount expended in superstructure	7,681,097,73
Amount expended in station buildings	3,214,424,75
Am'nt expended in engine houses, machine shops	1,209,205,73
Amount expended for land damages and fencing	7,781,299 72
Amount expended for engineering and agencies	3,254,501,64
Amount expended for locomotives and cars	9,686,520,77
Total am'nt expended in construction and equipment, including grading and superstructure	95,466,243 59
Amount expended on do. during the year	19,130,411 44
Whole length of road laid is, miles	2,093
Whole length of second track laid on the above, is miles	554
Number of locomotives	490
Number of passenger and emigrant cars	595
Number of baggage and freight cars	5,388
Number of miles run by the passenger trains for the year	5,234,963
Number of passengers carried on the cars as reported	2.841,147
Number of miles traveled by all the passengers	397,272,298
Number of miles run by freight trains	3,564,807
Number of miles of movement of the freight	219,454,492
The cost of maintenance of way (17 roads—miles only reporting this item)	$1,447,876 65
Charged to passenger business	$874,975 50
Charged to freight	606,973 08
The cost of repairs of machinery on 18 roads reporting is	1,403,154 81
Charged to passenger business	817,570 51
Charged to freight	564,771 35
The cost of operating on 19 roads reporting is	4,159,310 51
Charged to passenger business	2,155,597 92
Charged to freight	1,945,990 64

The receipts on 19 roads reporting are:

From passengers	$6,799,953 82	
From freight	5,890,638 10	
From other sources	602,298 46	
		$13,292.890 38

The payments other than for construction, on nineteen roads were:

For transportation	$6,418,187 71
For interest on debts	2,644,252 63
For dividends	2,417,536 04

The average cost of construction and equipments per mile of road, of those railroads which have reported their items has been as follows:

For graduation, masonry and bridges for 2,066 miles of road	$17,162 61
For superstructure, including iron for 2,066 miles of road	11,915 61
For station buildings for 2,066 miles of road	1,555 87
For engine houses and machine shops for 2,066 miles of road	585 29
For land and fencing for 2,066 miles of road	3,751 30
Total expenses of construction and equipments for 2,105 miles of road	$45,091 85

The number of locomotives on 2,076 miles is 1 to 4 and ⅓d miles of road. The number of passenger cars on 2.076 miles, is one to four and one-third miles of road. The number of freight cars on 2,076 miles, is one to 38-100 miles of road. The average mileage on the passengers for each mile run by the trains, is seventy-six. The average distance travelled by each passenger is nearly forty-eight and a half miles. The average speed of the express train when in motion, is forty miles per hour. The average number of tons of freight for each mile run by the trains, is sixty-two tons. The average distance each ton of train was moved, 72¼ miles. The average speed of the freight train when in motion, is sixteen miles per hour. The average weight of the freight trains, exclusive of the freight carried, is 100 tons.

The roads reporting the amount of freight carried show an aggregate of 2,831,336 tons passing over the roads, but as the freight is frequently carried over two or more connecting roads, on each of which it is reported, the footing of these several amounts does not show the true aggregate of the tonnage carried. As near as can be ascertained, about one and a half million of tons of freight were carried on all the railroads of the State.

The reports furnish the number of tons of each classification of freight carried, but as the aggregate return must necessarily contain the errors above mentioned, these aggregates are only useful to show the proportions of each description of freight shipped, which are nearly as follows:

Of the whole tonnage, the product of the forest is 12 per cent; animals 20 per cent; vegetable food 22 per cent; other agricultural products 4 per cent; manufactures 12 per cent; merchandize 11 per cent; unclassified articles are 17 per cent.

The average cost of maintenance of way, per mile of road, is as follows:

	Charged to the business of Passenger.	Freight
For repairs of road bed	$374 31	$259 62
" " buildings	22 87	17 62
" " fences	11 38	6 83
" taxes	46 37	38 75
All expen. of maiute'ce of way	455 42	322 81
For all expenses, both passenger and freight	$699 12	

The average cost of repairs of machinery per mile run by the trains, is as follows:

	Cents.	Cents.
For repairs of engines	8 79	7 70
" " cars	6 07	7 30
" " tools	0 64	9 70
" " oil and waste	0 97	1 10
For all repairs of machinery.	16 45	16 80

The average cost of repairs of machinery per passenger, and per ton of freight carried one mile, is as follows:

	Mills.	Mills.
For repairs of engines	1 10	1 20
" " cars	0 80	1 20
" " tools	0 10	0 10
" " oil and waste	0 11	0 10
For all repairs of machinery	2 11	2 00

The average cost of operating the road per mile run by the trains is as follows:

	Charged to the business of Passenger. Cents.	Freight. Cents.
Office expenses, stationary	0 90	1 10
Agents and clerks	4 36	5 56
Labor, loadiug and unloading	——	9 33
Porters, watchmen and switchmen.	2 60	2 31
Wood and water station attendauce	0 93	0 79
Conductors, baggage, and brakemeu	5 00	6 10
Enginemen and firemen	5 00	6 10
Fuel, cost and labor of prepariug	13 60	15 50
Oil and waste for engine	1 83	2 24
Oil and waste for cars	0 69	1 30
Loss and damage to goods and baggage	0 57	1 30
Damages for injuries to persons	1 20	0 32
" to property and cattle	0 48	0 44
General superintendence	1 20	1 38
Contingencies	4 50	3 90
For all expenses of operating	42 80	57 67

The same per passenger and per ton carried one mile:

Office expenses, stationary	0 10	1 20
Agents and clerks	0 54	0 50
Labor, loading and unloading	——	1 50
Porters, switchmen and watchmen.	0 34	0 30
Wood and water station attendauce	0 10	1 10
Conductors, baggage and brakemen.	0 64	1 00
Enginemen and firemen	0 64	1 00

Fuel, cost and labor of preparing	1 70	2 50
Oil and waste for engines	0 23	0 30
Oil and waste for cars	0 10	0 20
Loss and damage to goods and baggage	0 10	0 20
Damages for injuries to persons	0 32	0 05
Damages to property and cattle	0 06	0 10
General superintendence	0 17	0 20
Contingencies	0 52	0 65
All expenses of operating	5 56	9 20

The average receipts per mile of road are as follows:

From passengers	$3,210 78
Freights	2,832 40
Other sources	289 70
Total	$6,393 83

The receipts per mile run by the trains are as follows:

From passengers	$1 34
Freight	1 73
Passengers, freight und other sources	1 56

The receipts per passenger per mile carried was 1¾ cents.

The receipts per ton of freight carried one mile, was 2 8-10 cents.

By comparing the foregoing average expenses, with those furnished in the last report, it will be observed:

That the cost of repairs of the track per mile of road exceeds that of the preceding year nearly fifty per cent., but that the repair of machinery per mile run by the trains is about the same. The better condition of the track has prevented the expense for repairs of machinery from increasing with the increased rates of speed which are now adopted.

The expense of operating the roads has increased about twenty per cent. over those of the preceding year, owing to the increased speed of the trains, and to the higher price of labor.

The tables which have been prepared show the comparitive cost of construction and repairs, and of operating each road, and the average results afford very useful and reliable information on these interesting subjects.

It is to be regretted that all of the railroad companies do not prepare their reports with the same care and accuracy that is generally observed.

The manner which has been adopted for preparing these tables, furnishes the means of detecting many of the errors, and it is believed that the publication of the errors will be found one of the most effectual means of inducing more care in the preparation of the reports.

In my last report, I pointed out some striking discrepancies, and suggested that additional authority should be conferred on the State Engineer, to enable him to inquire into the accuracy of the returns made to his office. I respectfully renew this recommendation.

The following statements, which are exhibited by the tables, will show how widely the cost and expenses of the various roads differ from each other.

	Highest.	*Lowest.*
Cost of gradnation and masonry per mile	$35,099 38	$5,540 57
Cost of superstructure per mile	25,218 02	5,040 14
Cost of land and fences per mile	6,448,93	1,086,28
Cost of construction and equipment per milo	81,812 16	16,848 98
Cost of graduation and masonry per milo of single track	21,506 70	5,200 52
Cost of superstructure per mile for single track	12,150 507	4,896 32
Cost of land and fences per milo for single track	5,573 77	1,140 23
Cost of construction and equipments per mile for single track	50,131 68	16,040 41
Cost and maintenance of way per mile, run by passenger train,—cents	30 39	10 93
Do. do. freight trains	56 39	8 05
Cost of repairs of machinery per mile, passenger trains	25 57	4 31
Do. do. freight trains	27 58	7 93
Cost of operating per mile, passenger trains	72 79	22 48
Do. do. freight trains	226 79	30 12
Cost of repairs of engines	14 44	3 27
Do. cars	9 29	0 70
Do. tools	1 59	0 03
By freight trains, repairs of engines	17 68	1 69
Do. do. cars	18 02	2 54
Do. do. tools	0 85	0 16
Cost of operating per mile ran by trains—		
Passenger agents—cents	10 85	1 17
Fuel	19 15	359
Conductors, &c	10 49	0 86
Enginemen	8 33	2 96
Freight trains	67 86	1 84
Fuel	52 75	5 58
Conductors, &c	48 12	3 05
Enginemen	40 17	2 75

To obtain an accurate average it has been necessary to reject some of the lowest results, and such of the reports as appeared to be evidently erroneous.

The tables, in some cases, show pretty plainly that these errors are caused either by carelessness, or designed probably for the purpose of reducing the expense of some particular item.

The whole number of persons carried in the cars on twenty rail roads	8,174,363
Number of miles traveled	397,272,298
Whole number of passengers injured	
Of whom were killed	11
Whole number of employees injured	97
Of whom were killed	56
Whole number of others injured	93
Of whom were killed	60
Making the total number injured	209
Of whom were killed	137

One passenger was killed for every 36,115,663 miles traveled, and one passenger was injured for every 49,659,037 miles traveled.

The classification of these accidents is as follows:

	Killed.	*Injured.*
Jumping on or off train in motion	14	5
Fell or thrown from train	19	8
Collisions of trains	6	13
Trains thrown off the track	5	5
Run over while walking, standing or lying on the track	57	17
Collisions with vehicles at road crossings	10	2
At work or standing by trains	5	16
Standing on platforms	3	—
Defective machinery	7	4
Other accidents	7	3
Total	136	73

The Albany and West Stockbridge, Buffalo, Corning and New York, Buffalo and New York City, Sackett's Harbor and Ellisburgh and Schenectady and Troy Companies, have not included in their reports any statements in relation to accidents, and it is not known to the department whether or not any have occurred upon these roads. It will be observed how few accidents have occurred to passengers from causes beyond their own control. One passenger was killed from such causes for every 198,637,149 miles traveled, and one passenger injured for every 66,212,050 miles traveled.

By a comparison of the ratio of accidents and miles traveled in 1852, with that of 1853, it will be observed that during the last year the passengers traveled nearly three times the distance traveled in the former years before meeting with an accident causing death, and one-quarter further before meeting with an accident not resulting in death.

These evidences of the increased safety of railroad traveling, both to the passengers and workmen, will be as gratifying to the passengers on railroads as they are to the public, especially when it is remembered that the speed of trains has been greatly increased during the past year.

This is partly due to the better condition in which the track and machinery are now maintained, and partly to the observance of greater care on the part of the travelers, and to the exercise of greater skill on the part of the managers and workmen. Respectfully submitted.

WM. J. McALPINE.

New Railroad Bridge.

We take the following from one of our Wheeling exchanges (we omitted to mark which.) As it is of interest to the railroad community, we give it as we find it.

"We have been shown a plan and drawing, the invention of a gentleman in this vicinity, of acknowledged reputation as a Civil Engineer. This plan consists of throwing across rivers and other navigable streams of any magnitude, first, a wire suspension bridge of sufficient hight to avoid any obstruction to navigation, to which a railway is permanently attached, extending on a level with, and connecting itself to the ordinary rail track on land. Into this receptical, which is designed to be of adequate size and strength to answer all purposes, the cars, engines, etc., are run from the land, and then in almost less time than we have taken to pen these lines, are drawn over the widest streams.

The motive power consists of an endless rope, passing over rollers of suitable form, to sustain it in the proper position, and propelled by steam or other stationary power.

This invention is destined to be one of the most important for the railroad interests of this country, that has ever been made. It supplies a great desideratum, and cannot fail to be brought into general use.

We regret that we cannot speak more freely on this admirable invention at this time.—Due steps have been taken to secure a patent and then the great merits of the plan will be speedily tested.

We again repeat that this invention cannot fail to prove immensely advantageous to those roads now awaiting or expecting soon to await a speedy and uninterrupted transit across our great navigable streams. The recent decision of the District Court of the U. S., sitting for Illinois, against the erection of an ordinary Railroad bridge across the Mississippi at Rock Island, will render this invention highly valuable to the people there enjoined.

"Small Potatoes, and f in a Hill."

We have just experienced an exemplification of the above quotation, and in the remarks we are about to make, we disclaim all desire to force the RAILROAD RECORD upon any person who may not wish to take it; but in the present instance there is so much *littleness* and niggardly feeling manifested, that we cannot refrain from making the circumstances known.

At the inception of an important railway undertaking connecting with our city, feeling a lively interest in its welfare, and deeming it of great advantage to Cincinnati, we freely gave *gratuitous* notices of the proposed road, meetings, &c., and even published the Engineer's Report in full, to the extent in all, of some two pages of matter, besides *giving* the President and Engineer numbers of copies of the issue containing the Report. All this *we* did for the Company, and what did the *company* for us? *Nothing*—not even so much as to subscribe for the paper. But of this we make no complaint. Speaking to a friend of the President of the Company some months afterwards, we incidentally mentioned the fact that the Company had not even subscribed for the RECORD. He told us to send it at once, and to continue to do so, and if the Company would not pay the bill, *he would*. In accordance with this instruction, the name of the Company was entered upon our list, and Nos. 50, 51, and 52 of Vol. 1, and Nos. 1 and 2 of Vol. 2 were regularly mailed to the Company, and all appeared correct. But in No. 2 we also sent a *bill of* $3 for a year's subscription, and whether it be that the *amount* frightened the President of a Company whose road is to be some 481¾ miles long, or because the Company could not afford such extravagance, or because he thought, until the *bill* made its appearance, that he was getting the paper, as he had the notices, &c., gratuitously, we know not; but we do know that we this day (14th inst,) ew received he No. 2 through mail returned to us, *but not until it had been cut open, pinned togelher, and evidently read through.*

Now this is a small matter, we allow; but "straws show which way the wind blows," and we think this no slight indication of the character of the man, and the policy he will pursue in the management of the road now under his charge. The undertaking is a grand one, and will evidently be consumated, but we do feel that, until the Board of Directors shall have for its head a man of more liberal and enlightened views, it will be an up hill road. Such narrow-minded men, in small matters, cannot take far-reaching, clear, unprejudiced views of larger business affairs.

When we commenced this article we had determined to give the name of the Company, but upon more mature consideration, we have concluded to withhold it for the present.

Tunnel on the Pennsylvania Central Railroad.

Deeming a few words relative to this great work acceptable to our readers, we copy as follows from the Philadelphia *Register:*

"The great tunnel passes through the Allegheny mountains. The excavation was commenced on the 13th of October, 1851, and the heading was finished on the first of February, 1854. The tunnel passes through the mountain at a point known as Sugar Run Gap, and lies in the counties of Blair and Cambria—the summit being the dividing line of the two counties. Tne tunnel was worked from both ends, and by means of three shafts of the following depth: east shaft, 150 feet; middle, 195 feet; and west shaft 148 feet. At the east and west shafts the material was hoisted by engines of about 35 horse power, and at the middle shaft a 60 horse power engine was employed, capable of hoisting material and working a winch plunge lift pump 225 feet in length. The material cut through in sinking the shafts was black and gieenish slate rock, several strata of fire clay, one heavy strata of soap stone, and three heavy strata of coal. Of the latter the first strata of coal was six inches thick; the second, 6 feet, and the third, 1 foot 8 inches. The whole amount of material excavation was 84,700 cubic yards.

The tunnel is 4,612 feet long, 2,865 cubic feet of which is arched, containing 7,700 perches of cut stone, and 9,400 perches of brick masonry, and 927 feet is cut through solid rock, where arching is unnecessary.—Eight feet of arch on each side is built of cut stone 22½ inches thick, resting on abutments of rock range work of the same thickness, and the crown consists of five courses of hard burnt brick, the whole laid with hydraulic cement. At grade, the width of the tunnel in the clear is 21 feet—ten feet above the grade, 24 fect. The height above the grade is 23 feet. The greatest elevation above the tide is at the west end of the tunnel, where the height is 2,161 feet. The grade ascending the eastern slope commences at Altona, and in a distance of 12 miles, where the west end commences, the height overcome is 993 feet, or 82¾ feet to the mile.

"The work was under the charge of Edward Miller and H. Haupt, Chief Engineer; Thos. Seabrook, P. A. Engineer, and Thos. Rielly, Assistant Engineer; at present, but a single track is laid through the tunnel. It is graded for a double track, which, when laid, will complete the work at a cost of about $45,000 or bout $125 per foot.

PUBLIC LANDS TO RAILROADS.—Hon. B. E. Gray of Kentucky, has introduced a bill into the House of Representatives, as follows:

That there be and is hereby granted to the state of Kentucky twelve hundred and fifty thousand acres of the Public Lands for the purpose of aiding in constructing a railroad from Louisville along the most advantageous and practicable route to some point on the Mississippi river in said state. And fourteen hundred thousand acres for the purpose of aiding in constructing a railroad from Hopkinsville by Danville, etc., to the mouth of Big Sandy river, with a branch from off some point on said road east of Bowling Green, to or near to Cumberland Gap, to be located by the Legislature of said state. And five hundred thousand acres for the purpose of aiding in constructing a railroad from Henderson toward Nashville Tennessee.

NEW YORK CENTRAL RAILROAD—COMPARATIVE EARNINGS.—The Superintendant of the New York Central Railroad makes the following tabular statatement of the gross receipts of the road for the first six months under the consolidated management, compared with the aggregated receipts of the separate roads constituting the line, for the corresponding months of the previous year. The working or transportation expenses of the six months have not yet been put into official form. When these are published, they will afford a fair criterion of the average per centage on the gross receipts at which this important line can be operated.

	Passengers.	Freight.	Total.	Increase.
1853. Aug.	$349,125.76	$140.000.00	$489,125.76	
1852. Aug.	294,510.80	79,565.19	374,075.90	$115,949.77
1853. Sep.	371,322.06	200.000.00	571,322.06	
1852. Sep.	340,916.87	97.758.00	438,674.97	132,647.09
1853. Oct.	326,706.54	223,500.00	550,206.54	
1852. Oct.	300,649.39	115,891.78	416,541.17	133,665.37
1853. Nov.	242,327.53	215,893.48	458,221.01

1853. Jan.	126,767.31	185,599.79	312,367,10	15,880.01

Total increase	$555,882.08
Total receipts New York Central Railroad for six months ending Feb. 1, 1854	$2,817,147.87
Total increase for six months	555,882.08
Average increase per month	92,647,01

A NEW PACIFIC RAILROAD SCHEME.—Senator Foote, of Vermont, reported a bill in the United States Senate, to construct a railroad to the Pacific. The following are the main provisions of the bill:

The company is to be organized under the name of the Pacific Railroad Company, with a capital stock of $75,000,000, or more if necessary, one-third to be subscribed by individual stockholders, one-third to be loaned to the company by the government, principal and interest to be repaid by the year 1885, and one-third to be granted to the company perpetually without interest by the government. To locate the road and attend to the preliminary organization of the company, the bill provides for creating a commission of one from each state. The commission is to meet two months after the passage of the act. It is to be allowed six months to locate the road, and to close its labors within twelve mouths, and receive eight dollars per day for the time employed. When the road is located books are to be opened and closed in two months. The whole number of shares to be 1,750,000, of which 250,000 to be subscribed by individual stockholders at $10 advance on each share, giving $2,500,000 to government, making $7,500,000 for commencing the work. Three commissioners are to be appointed by the government to act in its behalf. The terminus the road to be in the territories, and to have connected with it a telegraph. In consideration of one-third of the stock, the government is to have free use of the road for carrying the mails, troops, etc., and a mortgage from the Board for the other third. Six years are to be allowed to complete the road. No alternate sections of land to be given.—*Buffalo Rough Notes.*.

INDIANAPOLIS AND PERU RAILRAD—The northern terminus of this road was reached, and cars ran through over the road on Monday, the 27th ult., for the first time.

Baltimore & Ohio Railroad—new Depot at Wheeling.—This structure has just been completed; it is neat in its style and elegant in its proportion as any structure of the kind, while the convenience of its arrangement is nowhere surpassed. The cars have a double track through the main building. At the end is the reception room for passengers entering through several doors. On the right is the ticket office and the ladies' reception room, handsomely fitted up and conveniently arranged. On the same side is a passage to the rooms above. On the left is a baggage room, and the passage through the main room leads to South Street, where the omnibusses, &c., will be stationed. This building, as well as that of the freight depot and the bridge, have been under the direct charge of Mr. McComas, who has shown great skill and industry and enterprize in the whole work, and is entitled to great credit for the manner in which he has performed his duties.

Evansville, Indianapolis and Cleveland Straight Line.—The first section of this road has been let on favorable terms. The work is to be commenced on the 1st of April. The length of the section by air line, between the termini, is 54 miles, and only one mile longer by the line of the road—51½ of which is a straight line and 3½ miles curvature, with an average radius of 8,000 feet, and a maximum grade of 39 1-10 feet to the mile.

Cincinnati, Hamilton and Dayton Railroad.—The Dayton *Gazette* says: "The Cincinnati, Hamilton and Dayton Railway is to have a second track. Mr. Shoemaker has been employed, as we learn, to make the surveys and locations, leaving the present track some miles below Hamilton, and passing through Middletown, Miamisburgh and Carrolton. The new track, which is intended to be considerably shorter than the old one, will be used for the quick passenger trains.

Latrobe Compound Rail.—The Baltimore *American* says: "The Directors of the Baltimore and Ohio Railroad are so well satisfied with the trial which has been made of the three part compound rail of Mr. Latrobe upon a section of their road, for the last two or three years, that they have determined to adopt that form of rail for the second track to be laid between Piedmont and Baltimore. They also intend to use it upon such portions of the present track as require renewing, and the Mount Savage Iron Company is now extensively engaged in re-rolling the old rails of the Company into the new Latrobe pattern.

☞ The Columbia Branch of the South Carolina Railroad was very much damaged by floods in the early part of March.

To Contractors.—In our advertising columns will be found several notices worthy the attention of contractors. The St. Louis & Iron Mountain Railroad is a very important one to St. Louis, and will furnish many very eligible jobs to contractors. The State of Missouri supplies $750,000, and the city of St. Louis, $1,000,000 towards its construction. The total amount subscribed is about $2,000,000, which amount will be still greatly increased.

The length of the road is 87 miles, passing through a very healthy region, and tapping the richest iron deposit in the world. The work is tolerably heavy, but it is in the hands of men in St. Louis, who never undertake without completing. It is to be completed in December 1856.

The Memphis and Ohio, late Louisville and Memphis Road, is another company now seeking for contractors It is in the hands of prompt business men, running between two of the most important points in the West, affording a fine opportunity for lucrative and responsible contracts. We commend the advertisements to the consideration of contractors

Hook-head Railroad Spike.—We learn by telegraph from Washington, that the application of Henry Burden, of New York, for an extension of his patent on the machine for the manufacture of Hook-head Railroad Spikes was yesterday denied by the Commissioner of Patents. This decision will have the effect to permit other manufacturers to use the machine hereafter without restriction, after the expiration of the present patent grant.

Louisville and Lake Erie Railroad.—The following is from the Madison *Courier* of Monday:

"Erie Railroad.—At a meeting of the Board of Directors of the Madison and Lake Erie Railroad, held at the office of the Company in the F. & M. Insurance building, Captain White, General Stapp and C. C. Branham, Esq., were appointed a committee to visit Cleveland and close the contract with that city. The former Committee appointed to treat with Louisville, was directed to bring its negotiations to a close also, these movements being necessary before letting the work to contractors.

"The amount of subscriptions are deemed sufficient to commence the work immediately. Before the blossoms fall from the apple and peach trees this Spring we expect to announce the letting of the whole line to contractors."

In accordance with the above instructions, the Committee visited Cleveland, but we have not yet heard the result of this visit.

Waynesboro' Railroad, Ga.—This branch line, connecting Augusta with Charleston, via the Central Georgia, at Millen, has just been completed through. The event was celebrated by the citizens of Augusta on the 28th ult.

Camden and Amboy Railroad.—A bill has passed the Assembly of New Jersey for creating a sinking fund to purchase the works of the Camden and Amboy Railroad Company, as provided by its charter. It appoints the Governor of the state, the President of the Senate, the Speaker of the House and the Secretary of State, and their successors in office, for the time being. Trustees of the sinking fund, and authorizes the Treasurer of the state to pay over to said Trustees fifty thousand dollars on the first of January, 1855 and on the first of January of each year thereafter, a like sum, adding ten thousand dollars additional each year, from the transit duties received from the Joint Companies, until the expiration of the time limited by the charter for the purchase by the state of said railroad. All the appropriations and accumulations of said fund are to be invested in the stocks or bonds of the Joint Companies. In case the company shall relinquish their exclusive privileges, and accept a continuation of their charter, the sinking fund shall be transferred to the Trustees of the School Fund of the State.

Newport and Eminence Railroad.—A meeting of the Commissioners named in the act of incorporation of the Louisville and Newport Branch Railroad Company, assembled pursuant to legal notice, at the office of the Louisville and Frankfort Railroad, in the city of Louisville, on Saturday the 4th of March, 1854, for the purpose of directing the time, places, and manner of opening books for subscriptions of capital stock in said Louisville and Newport Branch Railroad Company. The meeting was organized by the appointment of Dr. Lyman Martin, of Owen county, President, and Norwin Green, of Louisville, Secretary.

A majority of the Commissioners being present, the meeting proceeded to business. Books for subscription were ordered to be opened at several different places, on the 13th inst., to remain open until 29th of April, on which day the Commissioners will reassemble for the perfect organization of the Company. Invitations were sent to the Directors of the Little Miami and the Frankfort and Louisville railroad companies, inviting them to send delegates to attend the next meeting of the Commissioners.

Personal.—We see it stated that Mr. Chas. Minot, whose resignation of the Superintendency of the New York and Erie Road we noticed a few days since, will visit Europe during the coming season, and that the Emperor of Russia has offered him the post of Superintendent of the St. Petersburg and Moscow Railway. D. C. McCallum, Esq., formerly Superintendent of the Susquehanna Division, is talked of as the successor of Mr. Minot.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

CORRECTED TO WEDNESDAY OF EACH WEEK.

32 shares Cincinnati Ins. Company per share 23 00

Money rates 1½ @ 2 per cent. per month.

MONETARY.

Since onr last report the state of the Money Market at the East remains unchanged in the main. During the week there was, for a short time, an increased stringency, but it soon wore off, and we now give our former quotations as the ruling rates.

A diversity of opinion prevails as to the effect of a general European War upon the monetary Interests of this country. Some hold that it will be of immense benefit, and others that It will act unfavorably hy disturbing tbe conrce of trnde. We are of opinion that, shonld an unlversal war take place upon the Continent, it will create a demand for our stocks as an investment for capital now Invested tbere.

Tbe Stock Market has been very active, though at a shade lower rates.

Among the New York Bond Stock Sales at the Exchange, for the week ending 7th Inst., are the followlng:

$1,000	Indiana 2½	63
15,000	Ills. Cent. Bonds, 60 d'ys	87¼

In these reports of sales of stock, we note a striking peculiarity in The Buffalo ann New York City Rail roan shares, since the 2d inst. It stands thus:

By A. H. Nicholay:

March 2d,	20 shares at	63¼	per cent.
	80 " at	60	" "
" 6th	20 " at	40	" "
" 9th	200 " ($5 per share) or	10	" "

By Simeon Draper,

300	shares	5	" "

What can he the meaning of this rapid, and almost unequalled depreciation? Is the stock good for nothing? and why? Who can respond?

Foreign Exchange 108½@109

At home, the Money Market presents more stringency than at our last report. The demand is active, while the supply has diminished somewhat. The Banks do only a limited business. The street rates are 1@1½ per cent. per month.

In the Stock Market there is less activity, caused hy the stringency of the Mouey Market, though the prices of stocks have been well maintained, as will be seen from our reports.

Eastern Fxchange is limited, and remains firm at our present quotations.

The following decision of the Supreme Court of the State of New York may be new to some of our readers. It is, that an individual establishing a hank, is liable, in case of failure, to the extent of all his private property, &c., as In the case of a eommon debt. It has heretofore been the impression that when what is commonly known as a circulating bank fails. tbe holders of the notes can only look to the securities deposited with the comptroller for the redemption of the notes; and If, on exhausting the same, they should be found insufficient for the final redemption of tbe whole issue, the holders are the losers. This decision, however, rules it otherwise. In the case of associated banks, tbe rule, as formerly understood, applies.

DAYTON & WESTERN AND GREENVILLE AND MIAMI RVILROADS.—We are sorry to perceive that a disagreement has taken place between these two companies, by which the latter is prevented from making its Dayton connection. By contract, the Greenville and Miami company have heretofore used the track of the Dayton and Western road from Dayton to the junction, 14 miles. This contract expired on 5th inst., since when the Dayton and Western company have refused to renew the arrangement, or to allow the rolling stock of Greenville and Miami company to traverse their road. The time tables of the companies are so arranged, that passengers from Union and that section, going to Dayton, are detained at the junction some six hours. This is not as it should be; the spirit of accommodation should ever be maintained among railroad companies; rival interests should not resort to such extreme measures; there is business enough for all.

The Greenville and Miami company will have an independent track ready in about ninety days.

DAYTON, BLANCHESTER AND MAYSVILLE RAILROAD.—We are informed that the above named company surveyed a trial line last week from Blanchester to Maysville, and found a very favorable route, and the distance less than was anticipated, being only 43¾ miles, and making the probable distance between Dayton and Maysville 77 miles. The officers of the company are much encouraged by the prospect of aid developed by this exploration, and speak of the early construction of the road as being quite certain.

FORT WAYNE AND SOUTHERN RAILROAD.—The letting of grubbing, clearing, grading and bridging of that portion of this road between North Vernon and Jeffersonville will take place at Jeffersonville on the 12th day day of April next.

NASHVILLE AND CHATTANOOGA RAILROAD. From the sixth annual report of this company we gather the following summary:

Cost of roads, equipments, land damages, discount on bonds, cost of collecting stock, &c.	$3,713,938 59
Actual use of road,	2,636,609 68
Receipts for the year,	197,527 03
Expenses,	132,067 01
Net gain,	$65,620,02

ACKOWLEDGEMENTS.

HUNT'S MERCHANTS' MAGAZINE for March, being No. 3, Vol. 30, is at hand. Its contents are—Commerce of the United States, Biography of the late Samuel Appleton, Esq, with a Portrait; Trade and Commerce of Buffalo in 1853; Mineral and other resources of the West; Wealth and Capitalists of Boston; Journal of Commercial Law; Commercial Chronicle and Review, &c.

We are indebted to Thos. S. O'Sullivan, Esq., of St. Louis, for a copy the "HISTORY OF ST. LOUIS, Commercial Statistics, Improvements for the year, &c., &c., up to January 1st, 1854, with a map, illustrations, &c. Taken from the Mo. Republican of Jan. 10th.

In this "Annual Review" the progress and advancement of that city is depicted, and indeed its strides have been gigantic, and when the facilities of railroads shall be complete, her present prosperity, surprising as it is, will be so far eclipsed as to appear insignificant and of no account.

JOURNAL OF FRANKLIN INSTITUTE OF PENNSYLVANIA, No. 3, Vol. 27, for March, is at hand, containing articles upon Civil Engineering, Patents, Mechanics, Physics, Chemistry, &c., giving the most recent and reliable information upon all subjects relating to science. We frequently avail ourselves of this Journal for the benefit of our readers. Published monthly at Philadelphia. Price $5 per year. Postage free.

TO SURVEYORS, ENGINEERS and others, needing anything in the way of Mathematical Instruments, we would commend Messrs. T. F. Randolph & Brother, young men recently established in our city. They are prepared to fill all orders for articles in their line promptly and satisfactorily. We refer to their card in our advertising columns for particulars.

Advertisements.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

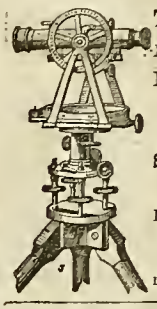
Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

NOTICE TO CONTRACTORS.

SEALED PROPOSALS will be received at the office of the undersigned, in the city of St. Louis, until sunset of THURSDAY, MARCH 30th inst., for the Grading and Masonry on the ST. LOUIS and IRON MOUNTAIN RAILROAD, extending from St. Louis to the Pilot Knob Mountain, a distance of 87 miles, (except sections Nos. 1, 2, 3, 4 and 6.)

Plans and profiles will be ready for inspection one week previous to the letting.



This line is located through a remarkably healthy region of country. The work to be let embraces a tunnel through solid rock, heavy earth and rock cuttings, and various descriptions of masonsy. Payments monthly in cash.

Further information may be obtained on application to either of the undersigned, or to the Engineers at the office of the St. Louis Iron Mountain Railroad Company in St. Louis.

mar.16.

MEMPHIS & OHIO RAILROAD.

SEALED proposals will be received at the office of the Memphis and Ohio Railroad Company, at Memphis, Tenn., until the 15th day of April next, for the grubbing, clearing, graduation and masonry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted security for the completion of the work, at the time, and in the manner specified, and contracts will be let in sections, or for the entire work, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, should none prove satisfactory; and it is desireable that all propositions should be submitted with the view of preparing the whole work for the iron as soon as possible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specifications may be seen at the office of the company, after the 1st of April.

mar.16-1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.
OFFICE—No. 2 Pine street, cor. of Broadway,

☞ Stocks, Bonds and Securities received for private Sale, and to the negotiation of which particular attention will be paid. mar9-3*

NOTICE TO CONTRACTORS.

PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrensburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.

The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.

THOS. ALLEN, President.
THOS. S. O'SULLIVAN, Chief Engineer.
Pacific Railroad Office, St. Louis, Feb., 1854. mar9 7t.

NOTICE TO CONTRACTORS.

OFFICE PITTSBURGH AND CONNELSVILLE RAILRROAD COMPANY.

SEALED Proposals will be received at the Office of this Company, at Neville Hall, in the city of Pittsburgh, until 5 o'clock, P. M. of WEDNESDAY, the 22d day of March next, for the Gradnation and Masonry of that part of the Pittsburgh and Connelsville Railroad extending from West Newton, in Westmoreland county, to Connelsville in Fayette county, this State, a distance of 25 miles. This work is generally of a very light character. It will be divided into sections of about one mile each. Proposals will be received for one or more sections.

Proposals will also be received until the same time for the making of the Tunnel at the Sand Patch Summit, on the Allegheny Mountains, about 25 miles from Cumberland. This Tunnel is to be forty-one hundred feet in length, through rock.—The work is worthy the attention of the best contractors. It is in an excellent region to do work cheaply.

Maps, Profiles and Specifications will be ready for the examination of bidders on and after the 6th day of March next, and all proper information given on application to Oliver W. Barnes, Chief Engineer, or the Assistant Engineers on the line.

Satisfactory testimonials will be expected from Contractors not known to the Company. By order of the Board.

W. LARIMEE, JR., President,

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimens of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S
PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted:—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

SIR:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION, as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

WM. SHERBURNE,
PRINCIPAL AGENT,

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinde of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plye, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warrauted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important inveution. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are iu 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights, n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
ar 3 140 and 142 Main street.

PHILADELPHIA

Type and Stereotype Foundry.

NEW BOOK OF

Specimens of Printing Types,

PLAIN AND ORNAMENTAL;

RULES, BORDERS, WOOD CUTS, &c., &c.

THE attention of the printing craft and the literary public is respectfully invited to the Minor Book of Specimens of Printing Types, &c., just published by us. The critical eye will at once perceive that it surpasses every work of a similar kind before issued in America, and that it fairly enters into competition with the finest productions of Enrope. Everything shown in this book, excepting Wood Type, is actually manufactured by us in our own Foundry, and may be relied upon as being finished in a workmanlike style.

Among its contents, we beg to draw attention to the specimen of our LABOR-SAVING RULES. The economic printer will soon learn to appreciate their valuable qnalities, and will be unwilling to dispense with the assistance they afford in the various kinds of Rule work.

THE CALLIGRAPHIC SCRIPTS

Form a new and beautiful variety of Type; and, with the

SCRIBE TEXTS, THE ARABESQUES,

THE COMPOSITES,

THE CHROMATIC TYPES AND BORDERS,

And a large variety of ORNAMENTAL LETTERS exhibited, give peculiar advantages to the tasteful workman in the production of chaste and ornate printing.

The display of plain and substantial Type of the Roman character is extensive. The Scotch faces have lost none of their valne and attractiveness of appearance, and are continually growing in he esteem of competent judges of good Typography.

The MUSIC will he found to be unequalled by any manufactured in this country, and not surpassed by any in the world.

The assortment of CUTS is large and various, many of which are furnished in copper at no greater cost than if in type metal, and yet are much more durable: and an Alphabetical Index is given, by which any Cut made by us may he easily found.

The prices of Type are as follow:

Pica at.....	30 cents.	Minion at.....	48 cents.
Small Pica.....	32 "	Nonpareil	58 "
Long Primer	34 "	Agate.....	72 "
Bourgeois.....	37 "	Pearl.....	1 08 "
Brevier.....	42 "	Diamond	1 60 "

Printing Presses, Standing Presses, Cases, Stands, Chases, Galleys, Printing Ink, and every article used in a Printing Office, constantly on hand, at the lowest rates.

Second-hand Presses, and Type used only in Stereotyping, at reduced prices.

Books, Pamphlets, Music, Labels, Wood Cuts, &c., Stereotyped or Electrotyped in copper, with correctness and despatch.

We are also agents for the sale of HOE'S, ADAMS', RUGGLES' and NORTHRUP'S PRESSES, and are prepared to furnish them promptly and at manufacturers' prices.

☞ Our SPECIMEN BOOK will he forwarded gratuitously to Printers who give us directions how to send it. If by mail, sixty cents in Post Office Stamps should be remitted to us to prepay the postage. The bound edition, however, is too bulky to go in the mails, and it will be necessary in ordering one of these to designate whether it is to be sent by express or otherwise.

L. JOHNSON & Co.,
†oc27 No. 6 Sansom street, Philadelphia.

CINCINNATI TYPE FOUNDRY.

AND

PRINTER'S WAREHOUSE.

L. T. WELLS, Agent.

THIS establishment is prepared to furnish printing materials of every description. We are constantly adding new styles of

PLAIN AND FANCY JOB TYPE.

Our new Scotch Face Type will be found well adapted for book and newspaper work.

The Washington Press, with our new Inking apparatus, as now made by us, will be found the most complete machine for printers ever made. Machine, and Hand Job Presses, Embossing Presses, and Card Printing Machines of several kinds, etc. etc.

Printers, by giving a description of the kind of work to be done, can be furnished with estimate of cost; and those wishing to make purchases at this establishment can have a specimen book sent them, by giving directions how it shall be sent. When sent by mail, postage-stamps to the amount of 62½ cents should be sent by letter or otherwise. If not pre-paid, the postage will be double that amount †mr3

FORGINGS.

AXLES, Shafting, and other Forgings, from the Gle n don Forges, for sale by
fmr 17 GEO. GARDNER & CO., Boston, Mass.

MUSKINGUM WORKS,
ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville.

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description, Second Class Passenger, Mail Express, and Baggage Cars; Freight. Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge All orders addressed

DOUGLASS, SMITH & CO.,
au4tf Muskingum Works, Zanesville, O.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture, suitable for Railroad, Turnpike, Canaliug, &c., in lots, to suit purchasers. Orders filled for any reasonable amount

HENRY ROCKEY,

THE CENTER OF POPULATION, AND OF COMMERCE, AND LOCOMOTION.

What really are the sources of commerce, and where commerce must ultimately tend, seems to be little understood by many persons. We hear much of the immense commerce of New York; that the revenue is collected there; that the public money must be expended there, because it is collected there, and various assertions and opinions of this sort, based upon the idea, that an importing city is the center or source of commerce.—Nothing is, in fact, more absurd than such an idea. New York, like all importing cities, is merely an *agent* for the transfer of fabrics, money and persons, to the place of their ultimate destination; and makes its living and its wealth by its receipts for this agency, like a commission merchant. The importer of silk goods, for example, adds his commission on the price, for his services and capital in transferring them from France to Ohio. The broker adds his commission on the money, which he transfers from the capitalist to the borrower. All this makes a commercial city, but does not make commerce, and is not its end, any more than a farmer's wagon, makes the hay and wheat carried on it. The sources of commerce are in a people and soil able to *produce*, and a people and wealth able to *consume*. It is the *producer* who furnishes the articles for the commercial agency to transfer, and it is the *consumer* who takes them from him. New York collects revenue, but who *pays* it? Ohio *pays* one-tenth the revenue of the United States. The Government informs us it has collected fifty millions of revenue; then Ohio has paid five millions of it. Indiana and Kentucky have paid five millions more.

The sources of commerce are production and comsumption. Now, let us see where production and consumption are. If the wealth of a coountry were very unequally distributed, they might be one sided, especially if some portions of the country were barren. But, in the United States, the advantages of the country and the wealth of the country are very equally distributed. The older states have the largest share of manufactories, but the new ones in soil, and all natural productions. Ohio is probably as wealthy, in proportion to its inhabitants, as any state, except perhaps, Massachusetts or New York. In this nearly equal distribution of advantages, the center of production and consumption is practically, not far from the center of population. Where is the center of population, and what has been its progress? Without calculating it to a single mile, we may state that in 1790, the *center of population* was in Adams county, Pennsylvania; and in 1850, it was in Belmont county, Ohio. Thus, between 1790 and 1850, (sixty years,) the center of population has traveled *two hundred and twenty miles almost due west.* The center of population travels about 37 miles decennially, or nearly four miles per annnm. In half a century, it will be in Indiana, and it will be a century, at least, (if ever), before it crosses the Mississippi. Probably, if the Union continues as it is, it will never cross the Mississippi. The reason is obvious. Between the California Mountains, and the west line of Missouri, there is but a small portion of fertile lands; while east of the Mississippi, and west of the Alleghenies, every acre may be made a garden spot. West of the Mississippi to the Pacific, is a greater distance than from the Atlantic to the Mississippi, but far less fertile and productive.

The center of population is in Ohio, and it is evident from the preceding facts that it will be so for half a century. Here, in Ohio, then, is the *center of commerce*, and it is this fact, which so rapidly creates its wealth, developes its industry, and gives us such activity to locomotion; and this activity, industry and development, is not likely to be all diminished; on the contrary, it will increase. The commercial growth of its chief ports have never been equalled by the growth of any part of the world. Cincinnati, Cleveland, Sandusky and Toledo, are all growing rapidly, and to these we should add the interior towns of Dayton, Columbus and Zanesville, more immediately dependent on manufacture, but connected with the others by railway. To illustrate the growth of *commerce* in Ohio, we will give the aggregate population and growth of these towns. For it is well known that the *commerce* of these places has increased more rapidly than the population, so that in giving the growth of the towns, we really represent the growth of commerce.

The *aggregate* population of Cincinnati, Cleveland, Sandusky, Toledo, Dayton, Columbus and Zanesville, at different periods, were as follows, viz:

In 1820	13,141
In 1830	32,722
In 1840	72,512
In 1850	180,351
In 1853	about 247,512

Here is a steady increase of 140 per cent., decennially, or 14 per cent. per annum. The population of these towns in 1860, will, in all human probability, exceed half a million of people. Cleveland will then have its 60,000; Toledo its 40,000, and other towns in proportion.

This growth of towns is not so much the growth of general population, as it is of surplus production, and of commerce. The following sums are something like the *aggregate* commercial value, which passed through these places in 1852:

Cincinnati	$110,000,000
Cleveland	30,000,000
Sandusky	59,600,000
Toledo	57,300,000
Dayton	5,000,000
Columbus	5,000,000
Zanesville	3,000,000
Aggregate	$269,000,000

The values at Toledo and Sandusky are said to be accurately ascertained; that of Cincinnati is very nearly correct. The others are estimates. The value of flour, wheat, corn and hog products exported from Toledo, were equal to *eight millions of dollars*. The value of the same articles exported from Sandusky and Cleveland, were probably equal to that at each place. The value of the same articles, with whisky, candles and soap, exported from Cincinnati, were equal to *thirteen millions*. The value of wool, cheese and butter exported from the state is equal to *four millions* of dollars. Thus we have in the exports of half a dozen agricultural articles, *fifty-one millions of dollars*. When we consider an hundred other articles of domestic export; the vast consumption of these, or four millions of people for whom we import, and the already great extent of the manufactures of Cincinnati, of Dayton, of Zanesville, Columbus, Pomeroy, and other places; the vast amount of iron, coal, stone, and other heavy articles carried on river, canal and railroad, it is not difficult to comprehend that the internal commerce of Ohio, already amounts to *three hundred millions of dollars*. When we add to this, the commerce of Indiana, of Kentucky, Tennessee and Illinois, lying in the Ohio Valley, we see that the boasted commerce of the Atlantic cities, becomes altogether an inferior thing. Important and highly useful, and profitable as foreign commerce is, we should never overrate its value. It is the internal commerce of a country like this, which spreads from sea to sea, and almost from pole to pole, which gives profit to enterprise, and value to improvement.

This westward march of population, and the growth of commerce carries with it the *centralization* of locomotion. Already we see the comparatively small town of Indianapolis, become the greatest *crossing place* of railways. Already we see twenty railways made, or making into Cincinnati. Already we realize the geographical certainty, that through here must flow all the great channels of commerce, which will intersect and imigrate the Valley of the Ohio. Here, North and South, East and West, must shake hands, and if not friends, we will make them so.—We will show them the great inheritance of freedom, as it spreads out in beauty and glory over the continent. We will show them the silver Ohio, winding its way through the garden of America, and bringing greater wealth than golden sands, into the lap of its happy people.

Centuries will pass away before the center of population, of commerce, of wealth, and glory and grandeur, shall pass from this valley. Happy will it be, if contented to dwell amidst peace and plenty; and casting away the avarice and the passions, which make men the slaves of Mammon, or of Moloch, they live in harmony with God and man.—Thrice happy will they be, if, unlike the Hebrews, they shall realize that this is the promised land, and obey the God who brought them there. Fair is the inheritance, hopeful the prospect, inspiring the progress, and beautiful that law of freedom, which gives us Security Order and Liberty.

Railroads.

FRANKLIN AND WARREN RAILROAD—FIRST ANNUAL REPORT.

Below we give the President's report of this project, which secures an important eastern connection at the Pennsylvania State Line, with the various roads of that Staie leading eastwardly, and now in course of construction, while its course through the state of Ohio gives it numerous valuable tributary connections, aside and apart from its value as a through line.

The report of the President, Mr. Kent, is brief, but concise and comprehensive. We commend its perusal to our readers. We shall look for Mr. Kneass' report, giving the *elements* of the line, and when received shall lay it before our readers also.

To the Stockholders of the Franklin and Warren Railroad Company:

GENTLEMEN: The organization of the Franklin and Warren Railroad Company was completed on the 19th of June, 1851.

In its earlier operations, delays were interposed to the commencement of the work by the policy of a neighboring state, which, apparently, presented a hostile attitude to its advancement, and somewhat embarrassed the operations of its directors. Fortunately these embarrassments have been removed, and the company is placed in that position which insures a speedy completion of the great ends it has in view.

The second year of its existence opened a new era in its prospects. The general interests of the country required a great Eastern and Western railway communication, and the idea of a continuous route from the eastern Atlantic to the Pacific shores, took firm possession of the public mind. Our enterprise, gentlemen, is no less than a link (and an important one) in this great chain of intercommunication. The Board of Directors have been strongly impressed with the immense importance of this view of the subject, and have therefore, been at the greatest pains to secure the services of the best and most experienced talent for the prosecution of the work, not only of the highest importance to Ohio, but adequate and likely to be a portion of that great iron highway which is to connect the mighty mercantile mart of the Atlantic, with the gold producing mountains of California and the Pacific.

Early in October last, in charge of Col. Geo. Robinson, preliminary surveys were commenced, the results of which established a route of the most satisfactory character, on a line entirely adequate and admirably adapted for a through route, as well as for the convenience of the local trade of the country through which it passes.

Fortunately for the successful completion of this enterprise, this company has a charter of the most liberal character—entirely freed from those restrictive embarrassments which clog the movements of organization of a more recent date; and its organization having been completed previous to the adoption of the new constitution, relieves it altogether from the stringent regulations which it was thought necessary to adopt in that instrument. Perpetual in its franchises—freed from the chances of modification or repeal—containing no clause of individual liability, its provisions are of more liberal character than is now in the power of any Ohio Legislature to bestow.

Our charter authorizes the constructien of a single or double track railway, of any width of gauge, from the north-eastern to the western or south-western extremity of the state.

At present, the board proposes to locate the road from a point in the eastern line of the state of Ohio north-east. of Warren, Trumbull county, to Dayton, making Warren, in the above county, Windham, Ravenna, and Franklin, in Portage county, Tallmadge and Akron in Summit county, Wadsworth in Medina county, Bridgeport and West Salem, in Wayne county, Polk and Ashland, in Ashland county, Crestline and Gallion, in Crawford county, Marion, in Marion county, Richwood, in Union county, and Urbana and Lewisburg, in Champaign county, points on the line, passing through and securing the trade and traffic of all the important business points in thirteen of the most productive counties in the state; the aggregate productions of which exceed the general average of the state more than 35 per cent. in domestic animals, and 30 per cent in wheat, which last by the way, is no inconsiderable item, when we consider the fact that Ohio is the greatest wheat growing state of the Union, and furnishes more of the material for the staff of life for the New York and New Englaud export trade, than all the other states of the Union.

The town of Akron alone manufactured during the past season, one hundred and eighty thousand barrels of flour for shipment. During the same period, fifty thousand barrels were manufactured at the village of Franklin.

With this new means of transit during the winter months, and the increasing prosperity of the country, the quantity manufactured would, undoubtedly, be increased one hundred per cent.

Besides the immense live stock trade and wheat traffic, your line embraces the entire butter and cheese productions of the Western Reserve, which are also immense, giving those perishable articles a rapid transit to their natural markets, whether destined to a southern or eastern market.

In regard to the local passenger business along the line, correct conclusions may be drawn by comparison; the population per square mile will reach something more than thirty per cent. above the average of the state. As for the through passenger business, it embraces the East and the *Great West*, and your road may, therefore be emphatically denominated the *Atlantic and Great Western Railway.*

These, gentlemen, are only an index to the general resources of the entire line, which want of space prevents us from particularizing at this time. In fact, the board deem it unnecessary to further allude to the business prospects of the road. A glance at the map will show at once that a more highly cultivated and productive line of country could not be selected for the maintenance of a road; and it may safely be premised, that no other line (either existing or proposed) can interfere or compete with this.

Among the multitudinous projects of this railway age, there is none which makes a show of comparison with this line, if we except that known as the Lake Shore Road, the termini of which are Cleveland and Erie. But this, the best paying road within the borders of our state, sinks into comparative insignificance when compared with the immense advantages of the line now under consideration.

The objects of this line are similar to those of the Lake Shore Road; but its advantages are immeasurably superior. The Lake Shore Road will necessarily command a very limited local trade, while the Franklin and Warren runs through a rich and highly cultivated country, whose local business would alone fully justify its construction without any reference whatever to the immense business it must command at either end of the line.

To substantiate the general position herein assumed, and the great advantages claimed in location, it is merely necessary to state that it takes the same general line as that adopted by the far reaching mind of Col. Clinton when engaged in the examination of a line for a great railway route from the Atlantic to the Mississippi.

Subsequent surveys have shown that this route is among the most available as a portion of that gigantic enterprise which will ere long connect with iron bands the two great oceans of the globe.

With these suggestions I refer you with full confidence, to the forthcoming report of our able and distinguished chief engineer, Samuel H. Kneass, Esq., which will be furnished about the close of the present year.

It will be proper to state here, that a contract for the construction of the work was made with Mr. Henry Doolittle, in June last, at a rate below what the company might reasonably have expected, and every hope is indulged that it will be pressed to the most speedy and satisfactory conclusion.

The finances of the company are, it is believed, fully adequate for the construction of the road. They consist chiefly of local individual subscriptions, amounting in the aggregate to one million three hundred thousand dollars, with the encouraging prospect of being increased to one and a half millions of dollars. Of the first named amount, nearly one million of reliable subscriptions are now in the possession of the company; the balance will be ready for delivery at different points, on the line so soon as the proper examinations are made for the permanent location of the road. This amount, added to the portion subscribed and payable to the contractor, will amount to about two and a half millions of dollars, which, it is confidently believed, will constitute sufficient basis to insure the completion of the work, and establish ample confidence in the enterprise.

MARVIN KENT,
President.

CLEVELAND AND PITTSBURGH RAILWAY.

The annual meeting of this Company was held at Cleveland, on January 4th. The following is the full organization of the Company for the present year:

Cyrus Prentiss—President; Wm. S. C. Otis—Vice President; John Durand—General Superintendent; Isaiah Linton—Chief Engineer; Samuel Foljambe—Secretary; Wm. H. Stanley—Treasurer.

Directors—Zalmon Fitch, Wm. A. Otis, Henry W. Clark, Moses Kelly, Ellery G. Williams, Abner C. Brownell, of Cleveland; Henry H. Day, of Hudson; Cyrus Prentiss, of Ravenna; James Farmer, of Salinville; John S. McIntosh, of Wellsville; Hiram Stow, of Sharon; Joshua Hanna, of Pittsburg.

From the reports of the President, Chief Engineer and Superintendent, we give an abstract of the main facts:

The earnings for the year have been		$432,682 46
The general expenses		165,404 68
		$267,277 78
Less interest on debt	$97,241 73	
Dividends, 10 per cent.	161,605 93	258,847 66
Surplus net earnings		$8,430 12
The increase of receipts over the previous year is forty-two per cent., and amounts to		$126,884 17
The whole number of miles run, including timber, wood and gravel trains, has been		235,929
The number of passengers carried is		218,080
The earnings from passengers amount to		$215,256 14

The financial condition of the Company is as follows:

Expenditures during the year		$316,152 25
Reported last year		2,963,756 04
Total of expenditures		$3,279,908 29
The present amount of stock is		$1,979,100 00
Funded debt		1,142,200 00
Balance of temporary loans and other accounts		158,608 29
Total of receipts		$3,279,908 29

The amount of stock invested in the main line is $1,761,000. The length of the main line is 100,75 miles extending from Cleveland on Lake Erie to Wellsville, on the Ohio River. About half of the road is in thorough order, and the balance is being finished up rapidly. The road has three branch lines in construction, which are designed to control a very large amount of traffic. One of these is the Tuscarawas Extension running in a southwest direction from the main line to New Philadelphia, 31 miles, of which 16 miles are now being run. The Wheeling Extension is 31 miles in length, running from Bridgeport to Wellsville, and the Beaver Extension is 22.25 miles, running from Wellsville to Rochester. The work has been progressing rather slowly upon these extensions during the past year, but in the Fall a heavy force was put at work. From the vast amount of information given in the report upon the road, the traffic and the connections when finished, we have no doubt that the enterprise is very important and promising. Mr. Prentiss, the President, closes his remarks relative to the branch lines as follows:

As connected with the main line, these extensions exhibit an equally promising aspect. The incalculable amounts of trade and travel accumulating from the Baltimore and Ohio, the Ohio Central, and the Cincinnati and Marietta roads, with that from the cities of Wheeling and Steubenville, and the other towns on the line, seeking the lake, or northeastern or north-western destinations, can have no other legitimate outlet than by the main line of the Cleveland and Pittsburgh road. The Beaver Extension stands in a similar relation to the business which it may properly command, seeking the lake or northern destinations. On the whole the Directors regard these extensions as entitled to rank as main lines by themselves, taken independently, but regarded in connection with the main line, they must be pronounced to be most important sources of strength and income to the whole enterprise.

CINCINNATI AND LOUISVILLE PACKETS—LIGHTNING LINE.

It may not be known to all of our readers that a new line of steamers has been placed upon the river between these two points, by which traveling facilities are much improved. Business men can now leave Cincinnati at 7 o'clock, P. M., of one day, reach Louisville next A. M., remain all day there, take return boat at 7 P. M., and be in Cincinnati again next A. M., before breakfast; thus being absent from business but a single day; and withal, *lose* no portion of that. We commend this line to the favorable notice of the traveling public. The line is composed of the steamers David White and Alvin Adams, both of the first class. The line was established by the Madison, Indianapolis and Peru Railroad company, and runs in connection with that road stopping only at Madison. It also carries the United States through Mails, which arrive at Cincinnati every afternoon from 6 to 7 o'clock, thus giving Louisville two daily mails.

☞ The Erie Railroad Company have put on their road a telegraphic car, which can be taken to any point remote from a telegraphic station, where an accident occurs, and communicate results both ways.

ALABAMA INTERNAL IMPROVEMENTS.

We were very much delighted with the speech of Gen. S. P. Walker, in the Alabama Legislature, on the subject of "*State aid*" to railroads. It gives evidence of talents of high order, of an enlightened and enlarged view of the present progressive spirit of the age, as well as containing an eloquent appeal to the judgment and patriotism of his hearers. We give a few extracts. Speaking of Massachusetts, as compared with Alabama, he says:

Here, sir, is a state (Massachusetts) with only 7,800 square miles of territory, covered all over with railroad lines, "as with the countless fibres of a spider's web," not so large as the eight counties of this state which lie on the Tennessee river, and known as the Tennessee Valley—and certainly not half so blessed either with soil or climate—worth $666,000,000, and supporting a population of more than one million, with an average value in property, *per capita*, of $610! Sir, a spot of earth, half sand, half granite, on the sea-girt-coast of New England, scarcely bigger than the palm of my hand, worth more in dollars and cents, and, shall I say it? in the energy and enterprise of its people, than the 50,722 square miles of territory comprising the state of Alabama, with its beautiful valleys of fertile land, its huge mountains all pregnant with iron, its vast beds of purest marble, its rich fields of finest coal, with a population too indolent to lay a single hand on these vast treasures of nature, and shake them from their sleep of centuries in the long Past to build up a mighty empire in the all-compelling Present!

There is, it seems to me, sir, something in this picture, not over drawn, to humble that ostentatious parade of Southern superiority which you and I and the whole South are in the habit of boastfully asserting, without a proper respect, as the facts and figures show, to the true state of the case. For, allow me to say here to-day, that genius unexerted is no more genius than a bushel of acorns is a forest of oaks, and the wealth that lies forever embedded in the deep bowels of the earth is no more wealth than the sand on its surface is a coating of diamonds. The railroad system of New England is an essential part of the government, and it has exerted an influence second in magnitude to no other that can be mentioned, social, political or physical, in binding together, in one indissoluble brotherhood, within the compass of 31,000 square miles, that wonderful association of intellectual, mechanical and manufacturing activity.—It is the great "centripetal enginery" which has overcome and neutralized all the antagonisms of sections and of schools, and given to New England sentiment and New England morality almost the character of *individuality*.

Of the contiguous state of Georgia he says:

Look, sir, for instance, at Georgia. She has upwards of 1000 miles of railroad—more than any other Southern state, and, it may be truly said, *as a consequence*, she has in operation 45 cotton mills, using 90,000 spindles, and consuming, yearly, 50,000 bales. Whilst Alabama, with the finest water power in the world—a power in the single county of Lauderdale, capable of driving the whole machinery in the universe—has in operation but fourteen cotton mills, using 12,800 spindles, and consuming, yearly, only 8,500 bales! about equal to one week's consumption at Lowell, Massachusetts. Take up the map of your state, and look at nature's invitations to a new labor with higher rewards and a more elevated social position, yet fresh from the hand of God, and scattered in almost regal abundance through every county in the state, from the Mobile Bay to the Tennessee river, and then tell me if something is not due from the state—as a state—as a sovereign power, having the right of eminent domain, to aid in applying these vast forces—dormant but not dead—to a new development. Think you, that it is *God's mission* to us *only* to plant cotton, and plow corn, and dig potatoes? Had the Omniscient no purpose of human progress—no eye to human wants—in creating this immense power to be found in your rivers and your creeks, many of which would be called rivers elsewhere, on whose bosom daily float, in almost sinful idleness, the waves whose foaming crests, when broken by the wheel of the humble millwright, change their very nature and turn into dollars and cents with almost oriental prodigality! Sir, with mighty railway arteries, all bounding with life, radiating from the center to the circumference of your state, and with spindles and looms in anxious readiness to turn first into yarns and then into cloth the white fruit of the cotton fields, could we not exclaim, with honest exultation, though our gifts were great we have improved them!

Of the necessity of Railways to the welfare of the state, he says:

The prosecution of the great work connecting the waters of the Mobile Bay and Tennessee river, and thus uniting north and south Alabama, and putting us in connection with other great public works extending their ramifications to every section of the Union, must be followed, as I think I have shown, by an immeasurable enhancement in the value of the property of the state, resulting from the development of the rich and boundless mineral and agricultural treasures of the region through which it will pass, and that increase of population and manufactures which always follow the progress of works of public improvement. But I will add as among its chiefest blessings, and as the great charm of this modern miracle of rapid intercommunication, that it will bring together in social and commercial intercourse the people of north and south Alabama—your people, sir, and mine—who, though living under the same government—amenable to the same laws, and constrained to a common destiny—have neither social ties nor commercial relations. In view of this result, it is difficult to express, and impossible to exaggerate, our sense of the magnitude and importance of this great work. By what "figures of rhetoric or of arithmetic either," shall we measure its influence on our political condition, or on our social relations? It will build up Mobile, the beautiful emporium of our state, set as a gem on the bosom of the sea, whose enterprise deserves success, and whose example we should recognise as the cloud by day and the pillar of fire by night to lead us out of the bondage of old habits into a new life of energy and activity. It will cause the mountains to open their vast treasure-houses of iron and coal, garnered up for centuries in the long past, and make them joyous with the teeming life and smoking furnaces of mechanical enterprise and industry. All along its track commerce will spread her sail-wings in all directions, and trained skill with a magic wand will turn rough wood, and stone, and metal, into all instruments of convenience, comfort and ornament. It will bind the whole state to her sister states of the south and the Union, and not only make a great thoroughfare for the trade and travel of a nation, but a track over which will pass from the heart to the extremities the electric fire of that patriotism which flows from intimate intercourse, association and sympathy, and without which no people can possess either the sentiment or the substance of nationality."

And yet, notwithstanding this urgent and truthful appeal, the Legislature adjourned without passing a law aiding the Railroad system of their State. None of the Southern states stand more in need of Railroads for the development of their resources, nor should any other one of them have been more careful to foster every movement tending to their development. We look for better things in the course of another year. The necessity of state aid will have become so apparent that all must unite in advocating it, and then will Alabama take the rank to which her resources, as yet undeveloped, will entitle her.

Communications.

TOPOGRAPHICAL AND GEOLOGICAL MAPS IN THE SURVEY OF RAILROAD LINES.

We commend the following communication from the pen of an experienced engineer to the attention of those interested:

For the Railroad Record.

Mr. Editor: With your permission, I wish to draw the attention of your numerous readers to the necessity of having detailed maps of Railroad lines.

The first thing of importance in a Railroad survey, is a good detailed topographical geological map; the Surveyor or Engineer should be accompanied by a Geological Engineer, if he does not understand Geology himself.

The reasons for such a survey and map are obvious; by a detailed map the exact locality is placed in its true position, and the Geological Engineer thus would be enabled to point out the various clays, marls, chalk, stone, or mineral, the various hights could be determined upon the profile also.

The company could claim public aid, where there was anything found of utility; proprietors of land would not be in doubt, and contractors could commence their work with certainty, as the localities of the quarries would show whether they were accessible or not.

As matters are now, there is much uncertainty. We frequently hear of mineral being found as the contractors are proceeding with their work; it ought to be known before they commence, as it might have a great bearing upon the final location, and might be more favorable for the purpose of getting nearer the mine or quary, or whatever else it might be.

I think your readers will agree with me

that a Geological Engineer is necessary for fixing upon the location, and that companies will see to it in future.

I have been for several years engaged on the Railroads in England, and I never knew a location made without a good detailed map from half a mile to a mile wide, on the whole length of the line. It seems to be a favorite here to adopt a line from the profile only, without any regard whatever to its bearing upon points that might prove valuable to the company. Very respectfully,

PUBLICOLA.

Cumminsville, March 17, 1854.

FRANKLIN CANAL RAILROAD COMPANY.

The Harrisburg correspondent of the New York *Times*, writing on the 4th, gives the following account of a movement to transfer the Franklin Canal and Railroad to the Sunbury and Erie Railroad Company, and the conditions of transfer:

In the Legislature of Pennsylvania, to-day, a most important bill was introduced by Gideon J. Ball, of Erie, who has for its object nothing more nor less than transferring the *late* Franklin Canal and Railroad Company to the Sunbury and Erie Railroad Company. It is well known to the public that this road extends west from Erie to the Ohio State line, the charter of which was repealed on the 28th of January last, as a *sort* of preliminary to the adjustment of the most shameful acts committed at Erie. This bill of Mr. Ball's gives the Franklin Canal and Railroad to the Sunbury and Erie Company, and authorizes the latter to issue mortgage bonds to an amount equal to the cost of its construction to reimburse the parties who built it, or who may be interested therein, said bonds to be secured by a mortgage of the said western road, bearing interest at the rate of 7 per centum per annum, payable semi-annually in Philadelphia, the bonds to mature at the expiration of twenty years.

The bill secures to the Sunbury and Erie Company a power at once large and valuable, which enables it to discriminate in charges or tolls on tonnage or passengers passing over the west of Erie *so that it can entirely control the trade going East, and direct it to Philadelphia!* Within one year from the passage of the bill—and I have no doubt but that it will pass—the road is required to be opened for use from the point designated—*the harbor at Erie.* In general terms, it contemplates securing to the people of Erie all of the interests for which they contended in the late difficulties! The bill also provides that before taking possession of said road, *west of Erie*, the Sunbury and Erie Railroad Company *must subscribe for* 2,000 *shares of the capital stock of the Pittsburyh and Erie Railroad, and pay into the Treasury of the Commonwealth a bonus of* $250,000 *for the right of way from Erie to the Pennsylvania and Ohio State line!*

This is the purport of the bill in question, although its real features are not set forth in such precise terms. The subject is one which deeply, if not seriously, affects the interests of New York. It was referred to the appropriate committee, and when again brought forward your readers shall be duly apprised.

LAKE SUPERIOR MINES: PRODUCT

We cut the following interesting statement of the receipts of copper, iron, and silver ores at Sault Ste. Marie, from the Lake Superior mines, for the year 1853, from the Lake Superior *Journal:*—

Copper.	*Tons.*	*Pounds.*
Cliff mine, Eagle River	1,651	326
Minnesota mine, Ontonagon	769	1,090
North American mine, Eagle River	185	876
Northwest mine, Eagle Harbor	161	848
Copper Falls, Eagle Harbor	70	1,462
National mine, Ontonagon	42	538
Northwestern mine, Eagle Harbor	32	144
Siskowit mine, Isle Royale	19	437
Norwich mine, Ontonagon	38	1,425
Forest mine, Ontonagon	35	1,875
Isle Royale mine, Portage Lake	15	1,788
Adventure mine, Ontonagon	11	1,122
Ridge mine, Ontonagon	11	1,419
Aztec mine, Ontonagon	10	512
Toltec mine, Ontonagon	5	933
Portage mine, Portage Lake	5	1,023
Pitts & Isle Royale mine, Isle Royale	8	1,728
Douglass Houghton mine, Ontonagon	4	699

Iron Shipped in 1853.

Sharon Iron Works, Marquette, 442 tons, and 1,990 lbs. of blooms; 205 tons and 975 lbs. of ore.

Marquette Iron Works, 367 tons and 1,871 lbs. of blooms; 200 tons of ore.

Making in the whole, from both works, 809 tons and 1,877 lbs. of blooms; 405 tons and 975 lbs. of ore.

Amount of Silver.

Lake Superior silver mine, Michipicoten Island, C. W., one barrel, one keg, and one box of ore.

This is practical, and does not admit of controversy. We have reason to believe that the amount of silver ore that will be shipped during the coming season will be very large. A portion of the ore received by the Lake Superior Silver Company has been sent to the great English smelters, Johnson and Maltkey, and that firm offers £90 sterling a ton for the ore. We believe that more advantageous offers have been made on this side the water.

PITTSBURGH, MAYSVILLE AND CINCINNATI RAILROAD.—At a meeting of the stockholders of this road, at McConnelsville, on the 7th inst., the following board of directors were chosen, viz: Wm. Hawkins, Jas. A. McConnell and Milton Seaman, of Morgan county; and T. W. Peacock, Samuel Stranathan, John Fordyce and Wm. Lawrence, of Guernsey county. T. W. Peacock was chosen President.

MOBILE & GIRARD RAILROAD.—At a meeting of the Directors of this Company, held at Mobile on the 27th ult., R. A. Hardaway, Esq., resigned the Presidency of the Road on account of ill health. The Hon. Alfred Iverson of Columbus, Ga.,—U. S. Senator Elect—was chosen to fill the vacancy. The new incumbent is spoken of in high terms as possessing practical business abilities of a high order, and is largely interested pecuniarily in in the road.

KENTUCKY UNION RAILROAD.

The recent Legislature of Kentucky, though inimical to the chartering of more banks, were more friendly to Railroads. Newport seems to have shared the attention of the Legislators in this respect, having been made the termius of two important roads, viz: The Newport and Eminence and the Kentucky Union. Of the former we have already spoken; of the latter we now propose to speak. The line is to commence at or near Newport, or Covington, and extend thence to the Cumberland Gap, with the privilege of a branch from any point on the line to the Tennessee state line in the direction of Knoxville. The charter is liberal, being unrestricted as to route between the terminus named.

The object is a Southern outlet for the great system of roads centering at this point, of which the Covington and Lexington road will doubtless be the only line leading from Cincinnati for some time to come at least. The object in getting Newport named as the northern terminus was to make the "Union Company" entirely independent of any control.

This line will be a portion of the great line already spoken of in our columns, leading to the Atlantic sea board, under the name of the Cincinnati, Cumberland Gap and Charleston Company. It will also connect with the line via Tennessee and Alabama, to Pensacola, Florida. So far as we can understand it, no new lines will be undertaken for the present, when roads are already in course of construction, thus by uniting interests making it emphatically a "UNION RAILROAD."

AEROSTATICS.—The following is from the Paris correspondent of the New York *Times:*

"Two remarkable experiments in aerostation have highly astonished this city. Of the first I did not write you, for I supposed it a hoax. But it has been repeated since, and an eye witness has told me of the wonderful results. A man enveloped in a network containing a large number of bladders filled with hydrogen gas, ran, two Sundays ago, down the Champs Elysees at the rate of thirty-five miles an hour. His leaps were enormous; the ascensional power of the gas was not not sufficient to carry him up, but it neutralized three-fourths of his weight. Last Sunday he renewed the experiment upon an exterior Boulevard with a little more gas. He made forty miles an hour, and said that with a favorable wind he could easily make forty-five, and beat any locomotive without fatigue. With the tremendous muscular power possessed by man, it is evident that if he could in any way lengthen his legs, as this invention in reality does, he would realize the fable of the Seven-Leagued Boots. Caudler, the most agile clown of the circus, who was present, agreed soon, with a similar apparatus, to jump over the Seine. I understand that a dozen machines with improvements are now in course of fabrication, and that the idea of annihilating space has seized upon more than one adventurous brain. As to the aeronauts, they all acknowledge that they may as well burn their balloons."

NEW YORK PACIFIC RAILROAD.

This company have made a call for one-half of one per cent. on the capital stock of one hundred million of dollars. This will give a total of $500,000. The payment is already made of one tenth per cent., which leavse two-fifths of one per cent. due. The object of this call is to make the deposit of $300,000 required by the recent act of the Legislature of Texas, donating about eight millions of acres of land in aid of the construction of a Railroad to the Pacific, and to enable the company to commence the construction of the road as soon as the contract with the state of Texas is concluded.

In connection with the foregoing, we give the subjoined letter from the correspondent of the *Daily Delta*, of New Orleans:

SAN AUGUSTINE, Feb. 16, 1854.

Messrs. Editors: At a meeting of the Stockholders of the Texas Western Railroad Company, held in this place at the Court House to day, a majority of the Stockholders being present:

The object of the meeting being explained by Gen. T. G. Broocks, the President of the Board—which was to take into consideration a contract entered into by Col. J. A. Greer, (one of the directors) on the part of Texas, and Messrs. Chatfield and others on the part of the New York Pacific Railroad Company. Said contract was to take our charter and build the road, commencing on the Sabine at any point designated by the Board of Directors, etc.

On the vote being taken, it was lost by a very large majority.

A resolution was then offered, giviug the President and Board power to contract with capitalists to build the road. The citizens of this viciuity are altogether in favor of giving the road to the citizens of your state, if they should become bidders for it.

The citizens of Texas are in favor of sending their produce to New Orleans. Now if your citizens do not proceed at once to help them build the road, they will be compelled to take a contract from the New York Company. The amount of sixteen sections of land given by the State per mile will pay for the building of this road, and I must think a road from New Orleans to cross the Sabine river and connect with the Pacific road on the Trinity river, would in all probability be the best stock now in the market. The citizens of Texas will take one to two millions of the stock.

If the citizens of New Orleans should fail to aid Texas in this road, they will regret it when too late to repair the loss.

RED LANDER.

LOUISIANA RAILROADS.—A Bill has passed the Legislature of this State giving the Great Northern and the Opelousas roads the Bonds of the state instead of taxes upon property as heretofore; the former being much more readily realized for the immediate wants of these companies. It also reduces the tax, inasmuch as the amount necessary to meet the bonds will be less than one-half that required by the "tax loan."

The bill is to be submitted to the people for ratification at the next Charter Election, and will undoubtedly meet with hearty approval.

GREAT NORTH-WESTERN RAILROAD.

A company has been organized under the general railroad law of Iowa for the construction of a railroad from the Mississippi river, nearly opposite Galena, up the valley of the Tete des Morts, in a northwestern direction. Capt. Gear, of Galena, is President of the company. Last summer a preliminary survey was made by Capt. G. and other citizens of Galena as far as the great bend of the St. Peter's river. The entire route was found to be highly favorable to the construction of a road. From the great bend in the St. Peter it is proposed to continue the road up the valley of that stream to Stone Lake, intersecting at that place the survey of Gov. Stevens. The friends of this route claim that it will be the shortest and most direct between Chicago and the Pacific of any that can be adopted. Capt. Gear, President of the company, has strong hopes of obtaining a grant of land to aid in constructing the road during the present session of Congress. Prior to adjournment the Legislature of Illinois passed a joint resolution instructing their Senators and requesting their Representatives in Congress to vote for a grant to this road, of every alternate section of land for eighteen miles on each side. With such or even a smaller donation the success of the enterprise would be placed beyond a contingency.—*Ex.*

NIAGARA SHIP CANAL AROUND THE FALLS.—We are indebted to E. W. Serrell, Esq., for a copy of the Report of the Surveyors, made by order of the state of New York. Chas. B. Stuart Engineer in Chief, E. W. Serrell, Associate Engineer, Feb. 15, 1854. Eight different lines, varying from 2 to 16 miles in length, have been surveyed, and their several peculiarities duly noticed, and all of which are clearly defined upon the map accompanying the report. The size of the locks as recommended are as follows:

Length	300 feet.
Width	75 "
Depth of water on Mitre Sill	12 "

There will be 2 Locks to overcome a fall, on the several lines examined, of from 118 to 120 feet, of the best cut-stone masonary laid in hydraulic cement mortar, with walls 30 feet above and below the upper and lower gates of each lock, and four feet above the rest of the lock and slightly curved, so as to guide vessels through without touching the gates, or allowing their guards to ride over the walls. The water will be admitted into and discharged from the lock chambers through capacious tunnels built in their walls, with sufficient area of delivery to fill and empty each lock, and pass a vessel in fifteen minutes. The gates will be constructed of *Paynized* timber. to prevent wet or dry rot, bolted in the most secure manner, and moved by machinery.

The prism of the canal will be 170 feet at the top, and 130 at the bottom; depth of water 13 feet.

The estimated cost of the several lines varies from $1,269,056 for the shortest, to $17,603,658 for the longest. The construction of this canal will be of immense benefit to the trade of the Lakes. and doubtless prove eventually amply remunerative.

IMPORTANT INVENTION.—The Boston *Traveler* notices a recent invention by a citizen of Roxbury, which, if successful the editor of that paper thinks will be of inestimable value. The following is a part of his description of the machine:

"It has an excavator and pile-driver combined, and seems to possess the qualities of simplicity and effectiveness in such a remarkable degree as to secure it a rank far above all present machines of that description. Its ingenuity is marked by the extreme simplicity of its movements, and the extraordinary power of which it seems to be capable from that very simplicity. It is designed for canals, docks, and even for deep water work, being so contrived as to be made available without any diminution of effectiveness, for excavation one hundred feet below the frame of the machine itself, and may therefore be conveniently used for digging cellars and wells. It must likewise be found very efficient for excavation on railroads. And besides all this it may with great facility be converted into a pile-driver. The inventor calculates—and if the principles of operations as shown in the model are carried out in the working machine, he can hardly be mistaken in his estimates, that sixty cords of gravel or mud can be raised in an hour, which is at least four times the amount that is performed by any existing machine of the kind; and that without any additional expense of operation.

The necessary steps have been taken to secure patents here and in Europe, and the construction of a machine has been commenced.

MEMPHIS AND CHARLESTON RAILROAD.—The right of way for this line has been granted throguh the state of Mississippi, and the Company have agreed to subscribe $125,000, to the stock of the Mississippi Central Railroad Co., which is to be paid by transferring to the Memphis and Charleston Railroad Company, *good* and *solvent* subscriptions which have been made by the citizens of North Mississippi, to the Mississippi Central road, the Memphis and Charleston Railroad Company, pany bearing all the cost of effecting these transfers and of collectiug the debts when there is any legal obstacle, thus insuring the entire amount. If the said subscriptions do not amount to $125,000, the deficiency is to be supplied by the bonds of the Memphis and Charleston Railroad Company bearing interest, to the amount of $50,000. If there are still a deficiency, it is to be paid in cash. The sum is to be expended on the Mississippi Central Railroad, between Holly Springs and the point of intersection with the Memphis and Charleston Railroad, or rather no part of it can be expended elsewhere until that portion of it shall have been completed."

Charleston and Savannah Railroad.—This work, says the Charleston *Courier*, has already been begun, under circumstances more than usually energetic. The City Council, with enlightened forecast, have advanced the funds necessary for the preliminary surveys. These have been commenced, and are now being pushed forward with dispatch. Two companies of engineers are in the field. One of them, under Mr. H. Lee Thuston, starting from Charleston, has its tents pitched at 'Camp Frost' and is continuing the line southward. The other party, under Mr. Johnston, of this city, will run the line towards this city. The chief engineer Mr. McRea, left on a tour of reconnoisance throughout the whole line. We understand that his lines will be run through the Parish of St. Peters also, so as to present the relative claims of both routes, which have been urged. The field work will be finished in two months. If the subscription be taken, the company will be organized, and the work prosecuted rapidly.

Cleveland and Louisville Railroad.—The Cleveland and Louisville Railroad Company was organized on Monday, 7th inst., by the election of Olden Hays, John M. Glover, John Enoch, of West Liberty; Wm. I. Thomas, P. Smith, H. W. Culbertson, of Troy, Ohio; Richard Hillard, Esq,, of Cleveland, directors of said company.

Hon. Wm. I. Thomas was then elected President of the board, and E. C. Henderson and Ssmuel Taylor, Jr., secretaries.

The permanent office of the company is to be kept at West Liberty.

This company has for its object the construction of a railroad to unite with those already constructed, so as to have a complete uninterrupted railroad connection between the cities of Cleveland and Louisville, via Troy and West Liberty.

There is now invested in Troy and West Liberty. in this project, about $500,000, and about $100,000 at other points along the line.

Covington and Lexington Railroad.—We regret to learn that the damages done to this road by the late rains have been very serious. At various points between Covington and Falmouth, the Licking river undermined the track, causing it to sink several feet, and at other points washing away or damaging seriously the bridges over the water courses. The cars were not able to leave Covington for some days. About two hundred laborers were put at work along the line, repairing the damages. Persons living on the banks of the Licking, say that river has not been so high since the year 1800. Even the great flood of 1806 did not come within eight feet of the late rise.

The new bridge at Cynthiana, is reported as having been damaged beyond repair.

Terre Haute and Richmond Railroad.—In our statement relative to the standing of this company, published in No. 2, Vol. 2 of the Record, we omitted to state the date when those statements were made. It should have been October, 1853. By the Annual Report, Dec. 31, 1853—

The cost of the road was.....	$1,414,284 50
" " Union Depot.....	21,241 45
Capital Stock.....	738,650 00
Bonds, 7s,.....	600,000 00
" 6s	28.600 00

From these figures it will be seen that the cost of the road and of the proportion of the "Union Depot" at Indianapolis, have been increased. The capital stock has also been increased $1,300 00, and the 6 per cent bonds decreased $1,000 00.

The Great Northern Railroad of Louisiana.—A Bill has passed both branches of the Legislature of Mississippi appropriatnig at least two-thirds of the internal improvement fund of the state to the prosecution of this line of road through that state. The donation is valued at $800,000, and is to be applied to the construction of the road from the Louisiana line northwardly to Canton, and thence to the Tennessee River.

We are pleased to see this state opening its eyes to the necessity of protecting rail roads; we now wish that the necessity of providing for the "repudiated bonds" would become equally apparent for until such provision shall have been made, we fear it will be impossible for any scheme of internal improvemeut, passing through that state, to find aid and comfort from abroad.

Aluminium.—"A very remarkable discovery was announced to the Academy of Sciences by M. Dumas in its last sitting. He stated that M. Saint Clair Deville, had succeeded in obtaining from clay a metal as white and brilliant as silver, as malleable as gold, and as light as glass. It is fusible at a moderate temperature. Air and damp do not effect this metal, which is called aluminium; it retains its brilliancy, and is not affected by nitric or sulphuric acid, either strong or diluted, if the temperature be not raised. It is only dissolved by very hot chlorhydric acid. Several specimens of this metal were exhibited to the Academy, and on the proposition of Baron Thenard, it was voted unanimously that a sum should be placed at the disposal of M. Saint Clair Deville to enable him to make experiments on a large scale."—*New York Times.*

Baltimore and Ohio Railroad—Second Track.—About thirty-five miles of the second track, between Baltimore and Piedmont has already been constructed; the graduation of the road-way for the remainder has been nearly completed, and immense quantities of cross ties are ready to be laid at any moment. The main want is iron. For this, says the Cumberland Journal, Mr. Harrison, the President of the company, is now negotiating, and expects to obtain a portion at least from manufacturers in Wheeling.—*Wheeling Intelligencer.*

Uniform Gauge.—We learn that on Saturday last a train of cars reached Cleveland from Indianapolis, over a uniform gauge of 4 feet 10, or, in other words, that the Indianapolis and Bellefontaine road has been changed throughout from the 4 feet 8½ to 4 feet 10 gauge.

The Columbus, Piqua and Indiana company, which protested against this change, and sued out an injunction to prevent it, has, we understand, also decided to alter the gauge of that road, thus preventing any break of gauge at Union on any of the roads.

This want of conformity in gauge of track is a great drawback upon railway intercommunication, and should, as much as possible, be amended. Short-sighted views of "*State policy,*" or "Erie policy," as it is now called, will still continue, in some instances, to make a difference; but we hope in the progress of time, to see even this done away with, and an "United States Policy" substituted.

Cincinnati and Dayton Short Line Railroad Company.—At the annual meeting of the stockholders of this company, held at Cincinnati, Monday, March 20th, 1854, the following Board of Directors were chosen for the ensuing year, viz:

Peter Odlin, Daniel Beckel, of Dayton; Perry Pease, Carrellton; Charles Butler, Franklin; Joseph Dryden, Alexandersville; E. W. Cunningham, Reading; William Price, Geo. H. Pendleton, Jason Evans, R. W. Lee, James Wilson, George Hatch, and Charles Wolff, of Cincinnati.

The capital stock actually subscribed was $1,000,000, of which amount $773,150 were represented.

Peoria and Oquawka Railroad.—Through the politeness of Mr. Dykeman, we were favored with a ride over the finished portion of this road, a few days ago, and were much pleased with the prospect ahead. There is at present about eight miles of this end of the road finished and in good running order, and the rail is now being laid as fast as possible. We are informed that there is about as much, if not more, finished on the Burlington end of the road. It is intended to have a train running through to Elmwood, a distance of thirty-five miles, by the first of July. The company have several engines, passenger cars, &c., already contracted for, some of which are finished and are awaiting the opening of navigation to ship them to this place.—*Peoria News.*

Columbus, Piqua, and Indiana Railroad.—At a meeting of the newly elected board of directors, of the Columbus, Piqua and Indiana Railroad company, held in Columbus on the 3d inst,, the following persons were chosen as officers for the ensuing year, viz: M. G. Mitchell, President; R, Walkup Vice President; J. M. Ewing Secretary; Wm. Scott, Treasurer; A. G. Conover; Chief Engrneer.

MONETARY.

At the East we have hut a slight change to note in Monotary affairs, and that for the worse, rather than for the better. A growing stringeney characterizes the last part of the last weeks, caused by a sudden calling in of means by the Banks, rendered necessary to countoract the effect of a previous expansion. There is no evidenco of any panic however; money being plonty in hands of capitalists. The rates are slightly in advance of the last quotations.

The stringency in money matters has had its legitimato effect upon the Stock Market, and caused something of a decline in prices; though the best class o Railroad stocks still maintain their standing.

Among the sales at the STOCK BOARD of New York, up to 11th inst., wo find the following, viz:

Virginia	6s	105¾
"	"	106⅛
Ohio	6s., 1860	107¾
Indiana	2½s	63
Michigan	6s	104⅛
U. S.	6s. 1867	121½
Illinois Improv't. stock '47		91½
Illinois Central R. R. Co. Bonds		86½
" " privilege "		95½
Bonds Nor. Ind. mort. on Goshen Line		92¾
Bonds Mich. So.		86½
Bonds N. Y. Centra		93@93⅝
Bonds N. Y. & Erie 1s. mort		114½
Erie Railroad Stock		81@81¾
Mich. Cen. "		106@107½
Mich. So. "		119
Cleveland and Toledo Stock		99@100
N. Y. Central Stock		109¾@110¾
Clev., Columbus and Cin.		121½
Cleveland and Pittsburgh		88

Among the stocks reported by A. H. Nicolay, March 13th, we find as follows:

13 Bonds, $1000 ea., Parker Vein Steam Ship Co., 7s., 1858	8050@81	00
4 Bonds, $500 ea., Buffalo, Corning and N. Y. R. R. Co., 7s., 1867, conv. coupons	73	50
5 Bonds, $1000 ea., Toledo, Norwalk and Cleve., 1st mort., 7s., 1863, coupons guar. C. C. & C. Co.	88	00
1 Bond, $1000 ea., Attica and Allegheny R. R. Co., 1st mort. 7s. coupon	48	25
1 Bond $1000, Canandagua and Elmira R. R. Co., 2 mort. 7s., 1857, coupons	85	12½
$1,174,75, Bonds of City of Sacramento, Cal., 12s. coupons, 1854-6	79	25

By A. H. Nicolay, March 16th:

1 Bond $1000 Buffalo, Corniug and New York R. R. Co., 1st mort. 7s., 1867 conv.	72	50
5 do. do. do. do.	73	75
1 Bond $1000, Chicago and Rock Island Co., 1st. mort. 7s., 1870	93	75
4 do. do. do.	93	50
1 Bond $1000, Mich. So. R. R. Co., mort. on Jackson Br. 7s., 1865	84	50
1 do. do. do. do.	84	12½
5 do. do. do. do.	84	00

At the West there has been a stringency in money matters throughout the week, with a somewhat easier feeling at the close of the week. First class paper was taken out of doors at 1@1¼ per cent per month.

Eastern Exchange has advanced to 1@1¼ per cent. premium.

In the STOCK MARKET we have to note a dull feeling, consequent upon the scarcity of money; though we are pleased to note that our best roads still maintain their prices. The stock sales at the Board of Messrs. Hewson & Holmes will give the particulars of business done in that line.

In the Money article of the New York Trihune, we find the following in relation to the INDIVIDUAL LIABILITY of stockholders in certain railroad companies, and how it is going to operate upon the stocks of these companias in foreign markets -

"Commercial and Bankers' letters, hy the late arrivals from Europe, fnform us teat English and Continential capitolists havo recently obtained an impression that "individual liability" attaches to the stockholders in many of the railroad companies in the new States, and are disposed to inquire particularly into the matter. It is needless to sav that all prudent and sagacious American cpitaiists are wary on this point, and would not introduce to the market any railroad security subject to the doctrines of 'individual liability," or of the 'right to amend. repeal, and olter' without the consenl of corporators. And believing we understand the feeling of capitalists on this subject, we here and now admonish in time 3ny who may think of building railraads (and we helieve some do in Ohio) under charters or laws subject to 'individpal liability,' or the right to 'alter, ameud, and repeal' at pleasure, that they must supply all the money at home for their enterprise, as no part of it can be obtained in Europe or this city, now or hereafter, in the face of these restrictions, if the matter is understood. And we now state for the luformation of all parties, that all railroad companies organized in Ohio under laws passed previous to the adoption of the present Constitution, (August 1st, 1851,) are free from these restrictions. But all companies formed under laws passed since August 1st, 1851, are subject to these unwtse restrictions, (individual liability to an amount equal to their stock,) as the present Constitution provides that snch shall be the fact in all cases, whether expressed in the laws or charters, or otherwise."

We note the following Dividends :

Norristown R. R. Co. Div. semi an	4	per cent.

PAINESVILLE AND HUDSON RAILROAD.—Hon. V. R. Humphry was elected President of this company on the 3d inst.

ALTON AND CHICAGO RAILROAD.

We are informed that the work upon the Alton and Chicago Railroad, beyond Bloomington, which was suspended after the failure of Mr. DWIGHT, has been resumed. The road is in charge of Mr. GARDINER, the chief engineer of the company, and will be pushed to completion with all dispatch to Joliet, whence it will be extended by the cut off to Laporte in Indiana. The line is in an advanced state of forwardness, the greater portion of it being graded and ready for the superstructure. The rails are already laid several miles north of Bloomington, and several miles south of Joliet. Large quantities of iron are now going up from this point, intended for the Chicago road. There appears to be a reasonable certainty that the road will be finished through to Joliet during the coming season, thus shortening the time to Chicago several hours.

In regard to the "Laporte cut off," over which Chicago has made so much ado, we have been told that the contractors are pushing it through to Joliet as rapidly as money and men can accomplish it. A large force has been upon it during the greater portion of the winter, preparing it for the rails. The Southern Michigan Company, who are building it, have likewise the control of the Alton and Chicago road. The two lines together will form a road, leaving Chicago nearly fifty miles to the north, and intersecting the Southern Michigan road at Laporte, a point near the southern shore of Lake Michigan. When these connections are completed, the running time to New York city will be less than seventy hours.—*Alton Telegraph.*

NEW YORK AND GREAT WESTERN RAILROAD, BROAD GAUGE.—Will CHAPMAN'S CHANTICLEER correct the erroneous impression likely to be formed by reading the *star* communication in its issue of the 16th inst., as to the opinions of the RAILROAD RECORD relative to the extension of the Franklin and Warren broad gauge road westwardly from Dayton? The writer of that article should have been more explicit in his references.

LAKE MICHIGAN A FEEDER TO THE ILLINOIS RIVER. The St. Louis *Intelligencer* has a long article on the practicability of cutting a channel from Lake Michigan, at Chicago, to the head waters of the Illinois river, by which the latter can be made navigable at all seasons. The project is very feasible, the Lake being higher than the river sources, the intervening country level. The matter is being agitated, and may result in permanent benefit to the commercial interests.

FOUR MILE VALLEY RAILROAD.—We now give the particulars of the election for Directors of this Company, viz: P. P. Bailey, Fort Wayne, Ia.; Newton Larsh, Preble county; James Elliott, Fairhaven, William Elliott, Darrtown, Butler Co.; S. R. Mollyneaux, Oxford; Thos. Moore, Rossville; W. C. Davis, Cincinnati, Ohio.

The new board was organized at Rossville, 14th inst., by the re-election of P. P. Bailey, President, and S. R. Mollyneaux, Secretary and Treasurer.

COLUMBUS AND XENIA RAILROAD.—Robert Neil, Esq., has retired from the Presidency of this Company, Wm. Dennison, Jr., succeeds him.

Advertisements.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

Cincinnati, Wilmington and Zanesville Railroad.

OPEN TO CIRCLEVILLE.—Two daily Trains, (Sundays excepted) between Washington and Cincinnati, and one daily train between Circleville and Cincinnati. On and after Tuesday, March 14th, 1854, until further notice, trains will run as follows:

Upward train for Circleville, leaves Cincinnati 7:45 A. M., and arrives at Circleville, at 2:40 P. M.

Upward train for Washington, leaves Cincinnati at 3:10 P. M., and arrives at Washington at 8:05 P. M.

Downward train leaves Circleville at 12:15 P. M., and arrives at Cincinnati at 7:45 P. M.

Downward train from Washington, leaves at 6:30 A. M., and arrives at Cincinnati at 11:25 A. M.

Trains will stop for passengers as follows: At Williamsport, Four Corners, New Holland, Washington, Rattlesnake, Sabina, Cross Roads, Wilmington, Sligo, Clarksville and Morrow; and on the Little Miami Road at Deerfield, Butterworth's Water Station, Loveland, Miamiville, Milford and Plainville, and on proper signal by flag, or to the Conductor, at Branch Hill and Linwood, at Turnpike.

The downward Trains connect at Morrow with the Trains on the Little Miami Road for Columbus.

Lines of Omnibusses will run between Circleville, Chillicothe and Lancaster, connecting with the morning train from and evening train to Cincinnati.

Fare from Cincinnati to Washington.....$2 25
" " " " Circleville..... 3 00

For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

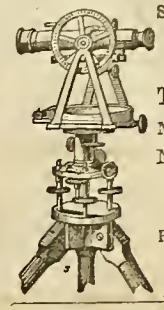
☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

mar. 23

NOTICE TO CONTRACTORS.

SEALED PROPOSALS will be received at the office of the undersigned, in the city of St. Louis, until sunset of THURSDAY, MARCH 30th inst., for the Grading and Masonry on the ST. LOUIS and IRON MOUNTAIN RAILROAD, extending from St. Louis to the Pilot Knob Mountain, a distance of 87 miles, (except sections Nos. 1, 2, 3, 4 and 6.)

Plans and profiles will be ready for inspection one week previous to the letting.



This line is located through a remarkably healthy region of country. The work to be let embraces a tunnel through solid rock, heavy earth and rock cuttings, and various descriptions of masonry. Payments monthly in cash.

Further information may be obtained on application to either of the undersigned, or to the Engineers at the office of the St. Louis Iron Mountain Railroad Company in St. Louis.

Orders promptly attended to.

MEMPHIS & OHIO RAILROAD.

SEALED proposals will be received at the office of the Memphis and Ohio Railroad Company, at Memphis, Tenn., until the 15th day of April next, for the grubbing, clearing, graduation and masonry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted security for the completion of the work, at the time, and in the manner specified, and contracts will be let in sections, or for the entire work, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, should none prove satisfactory; and it is desireable that all propositions should be submitted with the view of preparing the whole work for the iron as soon as possible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specifications may be seen at the office of the company, after the 1st of April.

mar.16-1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.
OFFICE—No. 2 Pine street, cor. of Broadway,
NEW YORK, } Metropolitan Bank Buildings.
March 1st, 1854.}

☞ Stocks, Bonds and Securities received for private Sale, and to the negotiation of which particular attention will be paid. mar9-3*

NOTICE TO CONTRACTORS.

PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrensburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.

The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.

THOS. ALLEN, President.

THOS. S. O'SULLIVAN, Chief Engineer.
Pacific Railroad Office, }
St. Louis, Feb., 1854.} mar9 7t.

NOTICE TO CONTRACTORS.

OFFICE PITTSBURGH AND CONNELSVILLE RAILRROAD COMPANY.

SEALED Proposals will be received at the Office of this Company, at Neville Hall, in the city of Pittsburgh, until 5 o'clock, P. M. of WEDNESDAY, the 22d day of March next, for the Graduation and Masonry of that part of the Pittsburgh and Connelsville Railroad extending from West Newton, in Westmoreland county, to Connelsville in Fayette county, this State, a distance of 25 miles. This work is generally of a very light character. It will be divided into sections of about one mile each. Proposals will be received for one or more sections.

Proposals will also be received until the same time for the making of the Tunnel at the Sand Patch Summit, on the Allegheny Mountains, about 25 miles from Cumberland. This Tunnel is to be forty-one hundred feet in length, through rock.—The work is worthy the attention of the best contractors. It is in an excellent region to do work cheaply.

Maps, Profiles and Specifications will be ready for the examination of bidders on and after the 6th day of March next, and all proper information given on application to Oliver W. Barnes, Chief Engineer, or the Assistant Engineers on the line.

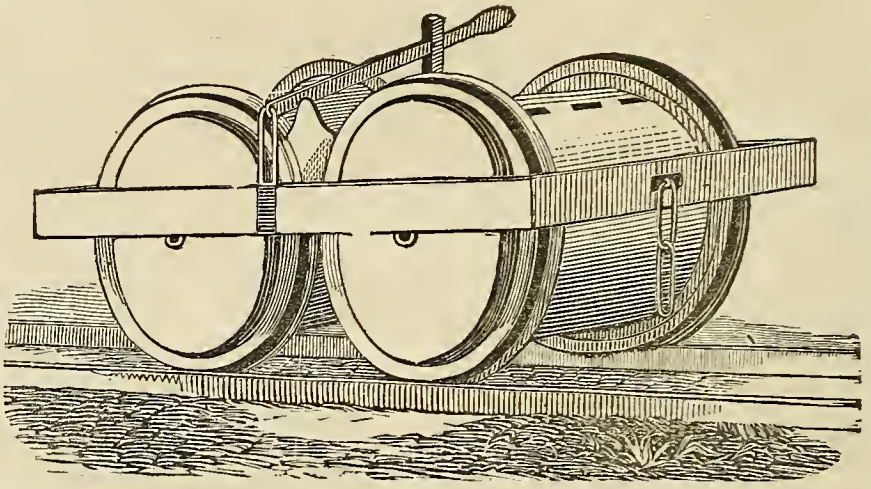
Satisfactory testimonials will be expected from Contractors not known to the Company. By order of the Board.

W. LARIMEE, JR., President,

mh 1tt] Pittsburgh & Connelsville Railroad Co.

TO CONTRACTORS.

SEALED Proposals will be received at the office of the undersigned in Indianapolis, until the 15th day of March next, for the grading, masonry and bridging of that portion of the Indiana and Illinois Central Railway between the west line of Edgar county and Decater, Illinois, being a distance of about 53 miles. The map and profile together with the plans and specifications will be ready for inspection at the office of the Company in Decater, on and after March 1st.



Any further information may be obtained at the office of the undrsigned, in Indianapolis.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimens of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S

PATENT AXLE BOXES

FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil ar perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

Sir:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION· as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

Axes.—1000 doz Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
apr 3 140 and 142 Main street.

PHILADELPHIA

Type and Stereotype Foundry.

NEW BOOK OF

Specimens of Printing Types,

PLAIN AND ORNAMENTAL;

RULES, BORDERS, WOOD CUTS, &c., &c.

THE attention of the printing craft and the literary public is respectfully invited to the Minor Book of Specimens of Printing Types, &c., just published by us. The critical eye will at once perceive that it surpasses every work of a similar kind before issued in America, and that it fairly enters into competition with the finest productions of Europe. Everything shown in this book, excepting Wood Type, is actually manufactured by us in our own Foundry, and may be relied upon as being finished in a workmanlike style.

Among its contents, we beg to draw attention to the specimen of our LABOR-SAVING RULES. The economic printer will soon learn to appreciate their valuable qualities, and will be unwilling to dispense with the assistance they afford in the various kinds of Rule work.

THE CALLIGRAPHIC SCRIPTS

Form a new and beautiful variety of Type; and, with the

SCRIBE TEXTS, THE ARABESQUES,

THE COMPOSITES,

THE CHROMATIC TYPES AND BORDERS,

And a large variety of ORNAMENTAL LETTERS exhibited, give peculiar advantages to the tasteful workman in the production of chaste and ornate printing.

The display of plain and substantial Type of the Roman character is extensive. The Scotch faces have lost none of their value and attractiveness of appearance, and are continually growing in the esteem of competent judges of good Typography.

The MUSIC will be found to be unequalled by any manufactured in this country, and not surpassed by any in the world.

The assortment of CUTS is large and various, many of which are furnished in copper at no greater cost than if in type metal, and yet are much more durable: and an Alphabetical Index is given, by which any Cut made by us may be easily found.

The prices of Type are as follow:

Pica at.....	30 cents.	Minion at.....	48 cents.
Small Pica.....	32 "	Nonpareil.....	58 "
Long Primer.....	34 "	Agate.....	72 "
Bourgeois.....	37 "	Pearl.....	1 08 "
Brevier.....	42 "	Diamond.....	1 60 "

Printing Presses, Standing Presses, Cases, Stands, Chases, Galleys, Printing Ink, and every article used in a Printing Office, constantly on hand, at the lowest rates.

Second-hand Presses, and Type used only in Stereotyping, at reduced prices.

Books, Pamphlets, Music, Labels, Wood Cuts, &c., Stereotyped or Electrotyped in copper, with correctness and despatch.

We are also agents for the sale of HOE'S, ADAMS', RUGGLES' and NORTHRUP'S PRESSES, and are prepared to furnish them promptly and at manufacturers' prices.

☞ Our SPECIMEN BOOK will be forwarded gratuitously to Printers who give us directions how to send it. If by mail, sixty cents in Post Office Stamps should be remitted to us to prepay the postage. The bound edition, however, is too bulky to go in the mails, and it will be necessary in ordering one of these to designate whether it is to be sent by express or otherwise.

L. JOHNSON & Co.,
†oc27 No. 6 Sansom street, Philadelphia.

FORGINGS.

AXLES, Shafting, and other Forgings, from the Gleadon Forges, for sale by
mar 17 GEO. GARDNER & CO., Boston, Mass.

MUSKINGUM WORKS,
ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville.

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description, Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge All orders addressed

DOUGLASS, SMITH & CO.,
au4tf Muskingum Works, Zanesville, O.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture, suitable for Railroad, Turnpike, Canaling, &c., in lots, to suit purchasers. Orders filled for any reasonable amount

HENRY ROCKEY,
No. 21 East Front street

J. DAVENPORT....M. D. WELLMAN....C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,
Railway Car Manufacturers,
MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburg, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel, or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident, that perfect satisfaction can be given in all work entrusted to our care

We have now on hand the best of dry White Oak with which we think we can build Cars as cheap and as well as any other establishment in the States. JOSEPH DAVENPORT.

Feb. 16†*

Indianapolis and Cincinnati Railroad, via. Lawrenceburgh.

NEW Route to Indianapolis, Terre Haute, Lafayette and the West.

Through from Cincinnati to Indianapolis in six hours.

Shortest route between Cincinnati, Indianapolis, Terre Haute, Lafayette and Chicago.

Passengers for this line will leave Cincinnati, from the foot of Main street, at 6 o'clock, A. M., by steamer Forest Queen, every day, (Sunday's excepted,) and arrive at Indianapolis at 12 o'clock, M., in ample time to get dinner, and take any of the trains West or North.

Baggage checked through and baggage master accompanies the same.

Fare between Cincinnati and Indianapolis $3.

At Shelbyville passengers may take the Jeffersonville, Rushville and Knightstown cars.

Returning, leave Indianapolis at 12 o'clock, M.

GEO. HAVEN, Superintendent.

Through tickets may be procured on board the boat, or at the ticket office, corner of Water street and landing (foot of Main street.)

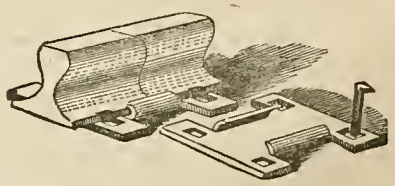
jan 12-† C. S. RUSSELL, Ag't.

COLUMBUS PIQUA, AND INDIANA RAIL ROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus, and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.



The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

A. G CONOVER, Sup't

Piqua, Sept. 13, 1853. s29-if.

RAILROAD SPIKES,

WROUGHT IRON
Chairs and Fastenings.

THE subscriber continues to manufacture with increased facilities, **Hook and Flat Head Railroad Spikes, and Wrought Iron Chairs of any pattern,** either punched or plain The best quality of Iron is used, and the articles are guaranteed to give satisfaction in every respect. We are prepared to fill orders for any quantity with despatch, and at the lowest market prices.

Also, Boat Spikes, Bolts, and Boiler Rivets, superior quality.

All communications addressed to us will meet with prompt attention.

To Contactors.—The attention of Contractors is called to the advertisement of the Louisville & Sandusky Railroad Company in our columns. A fine opportunity is offered for a profitable contract.

We are indebted to Mr. Charles Sumners, Chief Engineer of the Wabash River Railroad, for valuable corrections for our Railroad Map, of which we shall avail ourselves in the next edition.

OHIO AND MISSISSIPPI RAILROAD AND ITS FINANCIAL CONDITION.

The *American Railroad Journal* has, with its usual inaccuracy, made a statement in reference to the Ohio and Mississippi Railroad entirely erroneous. The occasion of this misrepresentation is the issue of second Mortgage Bonds by the Company, to provide for certain things not provided for in the contract of construction, and for that part of the cost for which the subscribed stock was inadequate. On this the *Journal* makes the following statement:

This company have made a new issue of 3,000,000 second mortgage bonds. This will make the capital account stand as follows:

Stock	$6,500,000
First Mortgage Bonds	2,800,000
Second " "	3,000,000
Total	$12,300,000

The original cost of the road was estimated at $9,000,000. An increase of one-third upon this estimate is thus made, while the road is in *embryo*. By the terms of the original contract, the contractors were to be paid as follows:

In Stock	$3,500.000
Cash	2,800,000
Bonds	2,500,000
	$8,500,000

At the date of the contract, the stock subscriptions to the road were stated to be $1,450,000, as follows:

Riply County, Indiana	$50,000
Jennings " "	50,000
Knox " "	200,000
Daviess " "	30,000
City of St. Louis	500,000
Individuals	620,000
	$1,450,000

In addition, the city of Cincinnati loaned its credit to the company to the amount of $600,000, which constituted the *first* lien upon the road.

The *contractor's* stock added to the above would make $4,950,000 of stock.

The *whole* of this statement, with the exception of some of the county subscriptions, is inaccurate, and calculated to give a false view of the affairs of the company. *First*—there is no "*new* issue of second Mortgage Bonds," for no other issue of second Mortgages has been made; but this error may be passed by as simply an error of language.

Secondly—There is no surprise to any person concerned in the issue of these bonds; for the London Bond holders, who were most interested, were *expressly informed*, at the time of the negotiation, that an issue of second mortgage would probably be made, in case the stock subscription was not filled up. The issue of these bonds was from the first contemplated and expected, as the parties in London can inform the *Journal*.

Thirdly—The "capital account" which the *Journal* makes out, is entirely incorrect. In the very first item of stock there is a great error. It *assumes* the whole amount of stock as subscribed; whereas it is the very deficiency of that stock which makes the issue of second mortgage bonds necessary. There is, therefore, in the above statement, from one to two million of dollars charged double—first in the stock, and then in the second mortgage bonds, which are, in good part, to supply the deficiency of stock. As there are two corporate companies, one here and another in St. Louis, we cannot tell precisely the state of the account; but when the road is completed on the present plan, the cost will probably be about $11,000,000.

Fourthly—The contract is entirely misstated. The contract of H. C. Seymour & Co. was for the construction (*except* land and land damages,) and for such cars, depots and furniture as were specified. Now, we shall see below that the *exception* covered a very heavy cost, and the depots and stations provided for were not near enough. But Seymour's contract for construction, &c., was to be paid as follows:

Cash	$3,500,000
Stock	2,750,000
Bonds	2,750,000
Total	$9,000,000

This is a totally different affair from what is stated above. It estimates the company as paying $750,000 more *stock*, and $700,000 less *cash*. A very material difference in practical finance. Besides this the aggregate was half a million more.

Fifthly—"The original cost" of the road was *not* estimated at $9,000,000, nor ever represented so to anybody. This was simply the amount of the contract for construction, with H. C. Seymour & Co. Now, to show the additional amount required, which appeared on the very face of the contract, and might be known to any stockholder or bondholder, who chose to enquire.

1. The land and land damages were *excepted* expressly; and on these there have been been paid, on the eastern end of the line:

Right of way	$360,000
Depot Grounds	285,796
Total	$645,796

Taking the whole line into view, these items may be set down at scarcely less than a million of dollars.

2. The contract specified *four* passenger depots and four freight depots. Now there are on the road between Cincinnati and the Wabash, *eight* cities and towns, besides *five* intersections with Railroads. Of course, many more depots and stations are necessary. The contract embraced all the construction and general furnishing of the road; but in an aggregate contract every thing cannot be foreseen.

These *additional* matters, however, were all plain on the face of the contract, and the facts could have been ascertained by any one.

In the minds of the engineers the "original estimate" was about *ten millions*. Considering all things in such a great work, it was remarkably near the truth.

Sixthly—The loan of the city of Cincinnati is *not* a "*first* lien," nor any lien at all upon "the road;" it is secured by the collateral pledge of a certain amount of *stock*, specifically mortgaged. If it had been a *first* lien, then the second mortgage bonds would have been a *third* lien—a very different thing. We must here express our marvelling surprise that intelligent people should so often assert what they know nothing about, and in which they are sure to blunder.

On the correction of these errors in the *Journal*, all the inferences based upon its fictitious statements tumble to the ground. The cost of the road is *not* what it represents; the amount of stock is not; the mode of payment is *not*; and, in fine, the whole statement is an error. The *Journal*, however, chooses to *insinuate* other matters, which require some notice. It says:

The contractors stock may have been issued, but it by no means follows that anything has been *paid* in upon it. It may represent *profits*, instead of showing that anything has gone into the treasury of the company.

What can go into the treasury on *contractors* stock, except the labor and materials in construction they have agreed to give for it? The contract requires that the work and materials shall be estimated by the engineers *monthly*, and the amount ascertained shall be paid—7-18ths. in cash—five and a half eighteenths in bonds, and the same amount in stock. Now, how *can* the contractors have stock not *paid* for, according to the terms of the contract, unless the officers of the company have committed a fraud? Profits, we dare say, the contractors make, and we know they *ought* to; but how much we know not; they will probably keep their own counsel.

Stock issued to individuals is paid for as it is issued, and it ought always to be so. There is, therefore, no stock issued which, according to law and contract, is not *paid* for, in any fair sense of the term.

"It would be interesting to know what amount in *cash* has been actually *paid in* on the stock of the company."

Well, if it will be "interesting," we will give that part of the information, which belongs to the eastern division. There are two companies separated in their operations, by the Wabash. We are only informed in relation to the eastern division, from Vincennes to Cincinnati; but have no doubt the western division is in equally as good condition. The part of the Seymour contract, apportioned to the eastern division, stood thus:

In Cash	$2,525,000
In Bonds	1,987,500
In Stock	1,987,500
Total	$6,500,000

Now, of stock, exclusive of the Cincinnati loan, the account stood thus:

Capital Stock	$2,061,956
Paid on do	1,580,925

Three-fourths of the capital stock, therefore, has been paid up. In regard to the ultimate *cost*, it may be remarked, that (except, perhaps, the Marietta and Cincinnati line) this is the only Western road (as to the eastern division) we recollect of which goes on neither plains nor valleys, but *crosses* the Ohio hills for much of the distance. This, with its expensive entrances into Cincinnati and St. Louis, will make it cost considerably greater than the *average* of Western roads. But this is far more than compensated by the advantages of its position, which are unequalled in the Western states. No man, who understands the Western country, or the valley of the Ohio, or the cities of Cincinnati and St. Louis, doubts, or can doubt, that point. In the nature of the country it will have less real rivalry than any other line, while every line of Railway in that vast district, will send its tribute of profit.

It is due to the officers and contractors of this Railway to say, that they have been nearer right in their estimate, and have conformed better to their engagements, and their plans, than nine out of ten of all the Railways in the country. This work now approaches completion, and a large portion of their line will soon be in operation. When it is, its stockholders, bondholders, and the public will soon know whether any exaggerated statements have been made, in reference to business and profits.

In the meanwhile, we think, it is to be regretted, that the *American R. Road Journal*, an old paper, in whom some people have confidence, (not us.) should so readily yield its columns to hap-hazard and erroneous statements in regard to a great, useful, and, to say the least, highly important work. The true way is to ascertain *facts* from those who know them, and then to make what comments seem fit. The world can judge whether the facts sustain them.

We will add, in conclusion, that the security of the second mortgage bonds of the Ohio and Mississippi Railroad, are unquestionably equal to any security offered in the country. If they should be offered in market at less than were obtained for the first mortgage, the difference will be just so much margin in favor of the holders; and so much better for the investment. It is a very different thing to hold the securities of such a work from holding those of small works, subject to competition, and not making one of the great central trunks in the line of commerce. No well informed man can doubt what the Ohio valley and the cities of Cincinnati and St. Louis are to be in relation to the commerce of the American continent; nor what position the Ohio and Mississippi Railroad will sustain to the valley, the cities, and their commerce. None of these things are doubtful. They need no puffing, and cannot easily be exaggerated by any stretch of imagination.

THE AMERICAN RAILROAD JOURNAL.

Having convicted the *Journal* of six or eight different and specific misrepresentations of *fact*, we supposed enough had been done to make a respectable paper ashamed; but it seems to want a categorical answer to its dogmatical questions; and as the answer can be given in a brief paragraph, we shall gratify its wishes.

"We do not wish to engage in a warfare of mere *loquacity*, and must decline to pursue the matter, till the Record shall answer *categorically*, whether it really believes, that were *eight* railroads constructed between the Scioto and Indiana state line, they would each earn ten per cent. *net*, upon their cost; and also, whether it thinks that first class, double track railroads, fully equipped, can be built in the West, at a cost not exceeding $35,000 per mile. *This* is the issue *we* make with the Record."

By the way, *loquacity* is about all the *Journal* deals in. Facts, with it, are scarce articles. But to the matter of fact. There are *now* in exactly those limits *seven* Railways, all doing well, and to these will soon be added two more, viz:

1. The Hamilton, Eaton and Richmond; 2. The Hamilton, Dayton and Central; 3. The Dayton and Greenville; 4. The Dayton and Mad River line; 5. The little Miami, Xenia and Columbus; 6. The Wilmington and Circleville; 7. The Hillsboro', &c.

These are all running roads, and to them must be added, in a very short time, the *Ohio and Mississippi*, the *Western*, and the Fort Wayne, in part. Except the small portion in which some of them unite near the city, they are distinct roads, and they will have five or six distinct depots in the city. Practically, there will not only be eight but *ten* Railways, besides two or three cross lines

not mentioned, running between the Scioto and the Indiana state line. The question asked of us is simply whether we believe these roads will pay *ten per cent.* dividend? To this we reply at once, *they will*; and if they do not, we will consent to be told that we know less about what we are talking than the *Journal*—a scale of estimation sufficiently low.

In regard to the ultimate cost of *double* tracks, we profess not to know; because, as yet, few roads anywhere are furnished with them. But when we know that, including our costliest roads, the *average* of Ohio running roads is only $22,000 per mile, we think it quite probable that the *average* of Railways with double tracks, in the North West, will not exceed $35,000 per mile.

Some three months since, the *Journal* said, that what is called the short line Railway from Cincinnati to Cleveland, would not, and must not be built. Now, whether that plea has merit or not, this was a summary dictation, which the people in this region of country treat with contempt, as they do many foolish assumptions of the same sort.

The great fault of the *Journal* is that it does not stick to the "*accurate data*," which is essential to all things of this kind. But we dismiss it in peace, and commend it in future to more discretion, as well as modesty.

Railroads.

COVINGTON AND LEXINGTON RAILROAD.

On Saturday last we took occasion to pass over this road to Boyd's Station, 50 miles, being as far as completed; on which trip it was our good fortune to find on the cars, Mr. Dougherty, Superintendent,—an old acquaintance on the Little Miami road, by the way—Mr. Gedge, a Director, and Mr. Hamm, Road Master, to all of whom, as well as to Mr. Wellman, the gentlemanly Conductor, we take this occasion to acknowledge our indebtedness for their polite attention.

The country through which this road passes is exceedingly rough and hilly, compelling the line to follow the tortuous course of the Licking river, on its west bank, as nearly as may be, by a constant succession of cuts and fills, and three tunnels. At Falmouth, a thriving little town at the forks of the river, 38 miles from Covington, the road leaves the main branch and follows the east bank of the South Fork of the Licking, through a region of country which, though still broken by hills, is nevertheless picturesquely beautiful and very productive, and will eventually yield a heavy traffic to the road.

Of the road itself, its construction, management, etc., we must say that we were most agreeably surprised. Being a new road, through a wild, hilly region, we had anticipated a rough ride over high grades, trestle-work and the like, but we found no such thing. The road as far as completed, was as solid and run as smoothly as any road we know of, and much more so than many new and some *old* roads we could name. In the whole distance there is no grade exceeding twenty feet to the mile, and but little of that; there is no trestle-work at all, the fills being all of earth, and all the approaches to what few bridges there are, are of stone. Under the efficient direction of Mr. Hamm, the road has been laid in the most substantial manner; had it not been so, the recent unprecedented rise of the Licking river, would have undermined and washed away large portions of the line, while as it is, but slight damage has been done—all of which has been repaired, in amount not to exceed $2000—which in its effects upon the road has been in reality a benefit, by settling the fills and making them more solid, and indicating the weak points and enabling them to be strengthened against any similar trial.

The construction of the road is being pushed forward rapidly; the laying of the track progresses at the rate of about two miles per week; the road bed is graded and the ties are ready on the line all the way to Paris, which point the company hope to reach in August or September. Cynthiana, 13 miles from Boyd's, will be reached in about six weeks.

In passing over the line, witnessing the deep cuts, heavy fills and the beautifully arched tunnels, we were fully impressed with the idea that it is possible to construct railroads *anywhere*, when, as is peculiarly the case with this road, the prospects of business will warrant the undertaking. The connections that will be effected by this line, are second to none in importance to Cincinnati, bringing the whole southern Atlantic and Gulf coast, in direct communication with us, and opening a class of business heretofore unknown to, or but partially enjoyed by this city. The ever-present effect of railroads is evident along the line. Amid the hills, central points for each neighborhood are being formed, a nucleus of some future town; and many persons born and reared within fifty miles of Cincinnati, who have never before been twenty miles from their homes, now avail themselves of this ready means of communication and bring their produce to market, and carry back many comforts to which their domicils had heretofore been strangers; thus do railroads, while adding to the wealth of the country, carry comfort to the hearth-stone of the farmer.

By a recent enactment of the Legislature of Kentucky, the charter of this company has been so amended as to enable them to raise all the means requisite for the prosecution of the work. We therefore look with confidence to its early completion, and from our own observation predict that it will be second to no other road in point of durability and efficiency.

SOUTH-WESTERN, TENNESSEE, RAILROAD COMPANY.

We are indebted to Col. Bosson, President, for a copy of the exhibit of the condition of this company, with the report of W. E. Ferguson, Esq., C. E., from which we learn as follows:

The Company was incorporated in 1852, with a perpetual charter, with a capital of $3,000,000 if desired. Its termini are McMinnville, on the south, and some point on the Kentucky state line, in the direction of Danville, on the north. This company is the recipient, among others, of *state aid* to the amount of $10,000 per mile, for laying the iron. It was put under contract to Messrs. Ferguson and Chamberlain, of Cleveland, Ohio, in June, 1853, to be completed and fully equipped as a first class road. The survey of the line was completed Nov. 21, 1853, and the original survey lessened 3 miles.

The cost of the road, completed in running order, will not exceed		$2,603,197 50
To meet which the company has State Bonds	830,000 00	
Individual Stock	103,000 00	
County "	100,000 00	
Contractors "	867,732 50	
		1,900,732 50
Balance		703,465 03

To meet which $1 000,000 of the company's Bonds, bearing not less than 7 per cent., have been authorised, secured by deeds of trust on the road, stock, &c.

These Bonds will not be used until the subscription shall have been increased $300,000, which, with a sale of $350,000 of the bonds, and the local subscription relied upon, will furnish ample means to complete the road.

From the Engineer's report we gather the following *elements*, viz:

Length of road		83.0 miles.
Straight line		63.8 "
Curved "		19.2 "
Curvature		3100 deg.
Alignment as follows:		
Gauge		5 feet.
Level		14.3 miles.
Less than 10	feet	3.3 "
Between 10 and 20	"	3 6 "
" 20 and 30	"	8.0 "
" 30 and 40	"	6.2 "
" 40 and 50	"	11.6 "
" 50 and 60	"	28.4 "
Of 70	"	3.2 "
do. 90	"	4.4 "
Total ascent going north		1,579 feet.
do. descent do. south		1,914 do.

Sharpest curve 6 degrees, having a radius of 955 feet.

The estimates for 83 miles of road and 3 miles of turn-out, are as follows:

Preparing road for iron	1,496,147 50
Superstructure	810,450 00
Equipment	216.600 00
Engineering and Superintending	80.000 00
	$2,603,197 50

Or $30,000 per mile.

From these remarks it will be seen that the position of this road is very favorable,

having but few hindrances, to an early completion, and those will, doubtless, be readily surmounted.

The "South-western Railroad" is an important link in the great arterial connection by which Lake Superior will be brought in close contact with the Gulf of Mexico, and over which the interchange of the products of the frigid North, and the balmy South can be rapidly and profitably made, by the way of Cincinnati, Ohio, Covington, Lexington and Danville, in Ky., McMinnville and Winchester, in Tenn., Montgomery, in Ala., and and Pensacola, in Florida; and over which the invalid can find himself in a warmer or a colder climate, as the case may be, in a few hours; while in some 50 hours only the traveler can pass through sixteen degrees of latitude, and six states of the Union. The sugar, cotton, corn and fruits of the Sonth will find ready markets at the North, while the fish of the Lake, the iron, lead, and other products of the North, will meet with no less ready sale at the South. And while the interests of commerce are being thus promoted, no less will the great cause of human weal be advanced by facilities of intercommunication afforded by these means; old prejudices will be effaced, new sentiments and feelings will be engendered, and the advance of the conntry to wealth and prosperity will be unparalleled. Railroads, while subserving the interests of commerce, are, nevertheless, great humanizers; they bring into contact distant sections heretofore antagonistical, perhaps, and by a community of interest and free interchange of feeling and thought, break down barriers heretofore considered impassable.

Thus may it be in this instance; and we hope to live to see the day when some, if not all, of the benefits to accrue from the completion of this great highway, shall dawn upon us. The Southwestern road, under the control of its energetic President, and in the hands of its present contractors, must necessarily progress to completion despite of every obstacle not actually insurmountable by human perseverance.

Cincinnati Western Railroad.—This road is now under contract to Marion, (Grant county,) and much of it between New Castle and Marion is already graded. So also, between New Castle and Cambridge City, the road is nearly ready for the iron.

The present contractors of this road, Messrs. Olmstead, Goodman & Co., are energetically at work, having several hundred hands engaged on the tunnels and other difficult places.

At Marion this road connects with the Cincinnati, Peru and Chicago line, which will make for some time to come, the shortest line between Cincinnati and Chicago.

The Cincinnati Western Railway is now progressing under fair auspices, and we hope will be as speedily finished as the work can be accomplished.

Railroad Earnings.

February, 1853—4.

EASTERN:

Name of Roads.	1853.	1854.	Increase.	Per Cent.
New York and Erie,	$308,569 19	$345,026 25	$36,457 06	11.81
Hudson River,	126,628 00	160,620 00	34,592 00	27.25
Pennsylvania Central,	284,461 48	301,765 38	17,303 90	5.75
Norwich and Worcester,	19,683 33	22,104 27	2,420 94	1.23
Del., Lackawanna and Western,	5,550 69	13,370 26	7,819 57	14.10
Baltimore and Ohio,	99,017 27	279,856 87	180,839 60	182.05
" " Wash. Br.		25,311 83		
Sixth Avenue, (N. Y. City,)		15,738 57		
Eighth, " "		17,129 18		

WESTERN:

Name of Roads.	1853.	1854.	Increase.	Per Cent.
Michigan Central,	$40,045 92	$90,398 19	$50,352 27	125.07
" So. & Nor. Ind.	58,890 00	91,890 00	33,000 00	56.05
Ohio and Pennsylvania,	29,955 00	59,105 00	29,150 00	97.03
Cleveland and Toledo,	27,000 00	45,172 00	18,162 00	67.30
Cleveland and Pittsburgh,	24,083 69	26,015 38	1,931 69	8.02
Mad River and Lake Erie,	26,315 28	33,407 85	7,092 57	26.95
Chicago and Rock Island,	New.	50,285 00		
Macon and Western,	25,996 57	28,671 86	2,675 29	10.03
Louisville and Frankfort,	18,170 25	13,944 14	4,226 11	23.25

In the above table we find evidence of prosperity throughout the Railway interest, scarcely equalled by any other branch of commercial enterprise. In some cases the increase has been enormous; but this is owing to some peculiar circumstances thus:

The Hunson River road has increased its earnings in consequence of the recent Canada connection, via that road, by which numbers of passengers are drawn from the old Boston route.

The Bellefontaine and Ohio road was not in operation in February last, to any extent, though it was opened through on the 1st of January previous.

The Michigan Central road is indebted to the opening of the Canada roads, and the difficulties at Erie, by which travel was diverted to the north of the Lake.

The Michigan Southern road earnings are the legitimate effects of its numerous connections; and would have been even larger, but for the Erie interruption.

The Ohio and Pennsylvania road was not opened through in February of last year.

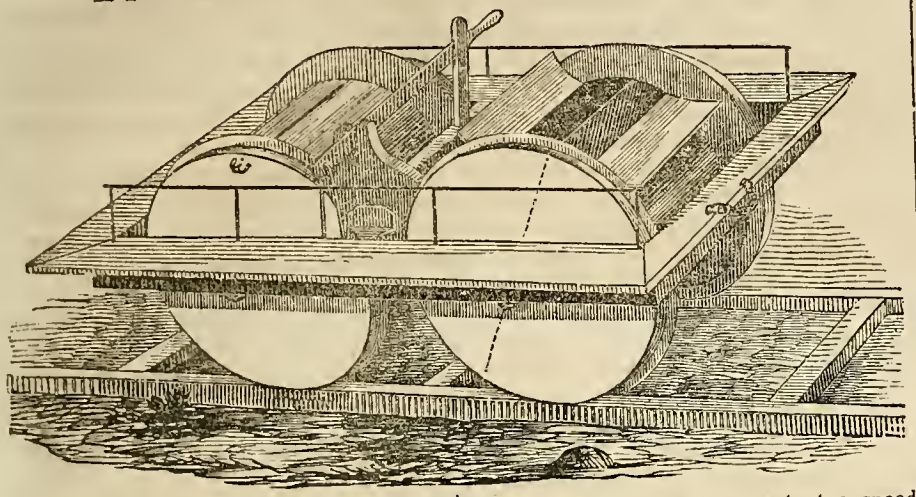
The Clevelann and Toleno roan, (consolidated) was not in operation in this month of last year; there was then but *one* road, and that incomplete; there are now two roads, and both doing a heavy business, which would have been greatly increased in February last, but for the Erie difficulties.

The Chicago and Rock Island roan was completed February 22, 1854, so we have no corresponding month with which to compare.

The Mad River and Lake Erie road receipts are the legitimate earnings uninfluenced by any external circumstances, except such as would rather militate against the road. It was predicted of this line that the opening of the Columbus and Cleveland road would injure it to such an extent, as to render it worthless, yet such has not been the effect. It has continued to increase in business, notwithstanding all opposition.

The Louisville and Frankfort roan: The increase upon this line is also the legitimate effect of its growing traffic, only, which must continue to increase largely when the rapidly completing connections shall be made at Louisville and Lexington.

The Clevelann ann Pittsburch road shows but a slight increase, which is readily accounted for by the fact that in February, 1853, *all* of the Cincinnati travel to Pittsburg passed over that line as far as Alliance; this was interrupted by the completion of the Ohio and Pennsylvania road, to Crestline.



From the table of earnings, we find as follows:

Six Eastern roads have increased—
Aggregate, - - - 242.19 pr. ct.
Or, each, - - - - 40.36 " "

Six Western roads—
Aggregate, - - - 380.42 " "
Or, each, - - - - 63.40 " "

Pacific Railroan.—The Washington *Union* learns that Mr. Allen, the President of the Missouri Pacific Railroad Company, has just closed a contract for the construction of its road from St. Louis, southwesterly through Springfield and Neosho, to a point on the western boundary of the state, but a few miles north of Arkansas; the western terminus is at the southeastern corner of Kansas Territory. This road from St. Louis is located on a direct line towards Albuquerque, in New Mexico, near which town the Rocky Mountains may be crossed through the pass, said to be the lowest yet discovered south of the British possessions. This pass and the southwest Missouri road way are said to have the merit of being at all times unobstructed by snow. It was to aid in the construction of this railroad that Congress recently donated public lands to the state of Missouri. Some forty miles of the road are already built and in operation.

MYERS' NEW PATENT FREIGHT CAR

The above cut represents a recently invented "Freight Car," consisting of two, or more, cylinders, with the rim of a car-wheel attached to each end, by means of which it is maintained upon the rails. The load is contained in these cylinders, in which, running from end to end, is a division, or center piece, to prevent abrasion or moving of the freight. These cylinders are kept in place by means of a frame work of wood resting upon journals, rivited in the center of the head of each cylinder; this frame work has also a narrow platform at each side, for the purpose of affurding a passage way from car to car, with a railing upon the inner side to prevent persons from falling upon the cylinders when in motion. The size of the cylinder is about five feet in diameter, and of a length to suit the gauge of the road upon which they may be used. Cylinders of this size contain about 2 tons 12 cwt. of coal each. If desired, a "platform car" can also be made of the whole by erecting the necessary work over the cylinders; in which case, instead of simple journals on the head of each cylinder, axle trees, passing through each cylinder, will be necessary.

This is unquestionably a valuable invention, and wurthy of the serious consideration of railroad and coal companies. It possesses numerous advantages over the ordinary freight car, especially for the transportation of heavy bulk freight, such as coal, lime, bacon sides, grain, &c.; while, as a gravel car in the ballasting of roads, it can have no equal.

In addition to the advantages in carrying freight, it has the peculiarity of *benefitting* instead of *injuring* the road traveled over. As the load lies immediately upon the rails, all that beating of the wheels, and swaying to and fro of the ordinary car, is avoided, and the steady, uniform motion of the cylinders acts like a roller to press the track solid and even. All moving or abrasion of the load within the cylinders, at slow speed, is obviated by the center piece, while the centrifugal force will of itself prevent any movement at a speed of 8 to 10 miles per hour, as has been fully demonstrated by actual experiment.

As a matter of economy, if for no other purpose, it should be adopted. Being perfectly in accordance with the natural laws of motion, it requires much less comparative force for its propulsion, and an ordinary engine can take a much larger number than of any other kind of cars; having no weight, except the frame-work, upon the journals, there can be but little if any friction, consequently less tractive power is needed for propulsion, and less oil for lubrication, no small item by the way. In the matter of wastage of coal, grain, or other loose freight, it far surpasses all other modes of transportation, as but little or none can escape, nor does it bruise or injure freight, such as coal, grain, &c., as the size of the wheel-rim obviates all jar. The wastage on coal will not exceed one per cent., while on the ordinary car it reaches fully five per cent.

We learn from Mr. Myers that Mr. Dudley of the Frankfort and Lexington Railroad Company, has secured one of them for the purpose of giving it a trial. We should be pleased to hear that numbers of our roads had done the same. The principle strikes us as being nearly perfect; and we should like to see it fully tested; the cost of a car cannot be very great, while the benefits resulting from favorable results upon trial would be incalculable.

C. Tiers Myers, No. 33 Walnut St., Philadelphia, is the proprietor, to whom communications may be addressed tor particulars as to cost, right to use, &c.

CINCINNATI, WILMINGTON AND ZANESVILLE RAILROAD.—This road is now completed to Circleville, and will shortly be opened to Lancaster, there being but three miles of track to lay. The tunnel near Lexington is progressing rapidly, and the entire line it is confidently expected, will be completed in January next.

INDIANA CENTRAL RAILWAY COMPANY.

SECOND ANNUAL REPORT.

We have before us the report of the President of this Company, in which is set forth a history of the undertaking from its commencement to December 30th, 1853. It was opened through on the 8th day of October, 1853, one week later than had been set for its completion.

The company has made a permanent running arrangement with the Dayton and Western road of this state, by which the entire distance between Indianapolis and Dayton, 108 miles, is run without change of cars. The company has also been admitted to an equal interest in the "Union Depot and Union Track," at Indianapolis, in common with four other companies. At Indianapolis connections are made with the roads leading west and south, at Knightstown with the Shelbyville road, at Richmond with trains to Cincinnati, and at Dayton with the numerous roads centering there. These radiating connections are all valuable, and cannot but make the Central road one of the best Western roads.

The length of the Central road proper is 72,41 miles, side track 3,49, total 75,90 miles; laid with T rail, over 60 pounds to the lineal yard; the road bed is 15 feet on the surface; cross ties of oak, 6 by 8 inches, eight within each panel of 18 feet. The Bridges are on Thayer's patent plan; the longer ones of pine, the others of oak timber.

The cost of the road 75,90 miles ready for running, is	$1,222,272 84
Or per mile,	16,100 00

With a surplus of materials on hand, sufficient for the construction of three miles of side track, additional.

The road is constructed in the best manner; the materials were contracted for prior to the rise in iron, &c., in 1852, by which a saving of some $300,000 was made as compared with present prices.

The capital stock of the company is..		$575,150 00
Mortgage Bonds, 7 per cent.....		600,000 00
Domestic " 10 per cent.....		463,600 00
		$1,638,750 00
Construction acc't..$1,222,274 84		
Equipments..... 218,437 89		
		$1,440,710 73
Excess.....		$198,039 27
Assets.		
Real Estate.....194,216 00		
Debts, Stock and Land..115,355 25		
Miscell. Debts.....35,257 41		
Iron, Cross Ties and materials on hand.....20,000 00		
	384,828 66	
Unfunded Debt.....143,777 60		241,051 06
Less Excess above.....		198,039 27
Excess of means.....		$43,011 79

The earnings of this company since it commenced operation have been very flatter-

ing, and are constantly increasing. The full facilities of the road have not heretofore been put into requisition, with a view to allow the line to become fully settled and permanent before allowing the transportation of heavy freight trains. The business is daily enlarging, and will eventually require all the facilities within the command of the company to meet the demand.

FAIRBANKS' SCALES.

From a small beginning, made some twenty-five years ago, the Messrs. Fairbanks have carried their business steadily forward, till by enterprise and skill, and honorable dealing, they have gained a world-wide reputation as scale manufacturers. It will be seen by reference to their advertisement in another column of our paper, that nearly a hundred and twenty Railroads, among which are the longest and most important lines in the United States, are supplied exclusively, or nearly so, with their Scales; and we understand the same remark is true respecting nearly all the great lines in England, their scales being made in that country by Messrs. Pooley & Son, Liverpool.

The New York and Erie Railroad has in use fifteen to twenty of Fairbanks's forty ton Track Scales, a large number of six ton Depot Scales, and a host of smaller ones, weighing from 600 pounds to 5000 pounds. They are now building for this road a forty-two feet suspension track, of the same pattern as that recently built by them for the Chicago and Galena Railroad. The last named scale was the first of the kind ever erected in the United States, and respecting it the Chicago *Tribune* says: "We are very confident that no one will examine and understand its operation, without concluding that the great reputation of Messrs. Fairbanks & Co., as scale makers, has been justly earned." The Baltimore and Ohio Railroad, the Michigan Southern and Northern Indiana Railroads, most of the New England roads, and nearly all the others mentioned in the advertisement, are exclusively supplied with their Scales. The agent of the Baltimore and Ohio road writes to Messrs. Fairbanks, under date of Dec. 12th, 1853, as follows: "Your Scales have been in use on the Baltimore and Ohio Railroad for more than fifteen years, and it affords us pleasure to inform you that they have given entire satisfaction. Scales from other manufacturers have from time to time been tried; but we regard yours as far superior, both for accuracy and durability, to any others that have been used on the road. At Baltimore we have three Track Scales and thirty-three Depot Scales in use, and all the stations from Baltimore to Wheeling are now supplied with your scales,"

Of their Weigh Lock Scales, for weighing loaded boats, the Messrs. Fairbanks have erected a number on the Canals in New York, Pennsylvania, and Ohio. Among these are some of the largest scales in the world, being capable, as we understand, of weighing with scrupulous exactness to the extent of more than 800,000 pounds; and yet so nice is their adjustment and finish, that the weight of a bucket of water may be ascertained by them. Of those on the Erie Canal, Mr. Mather, Canal Commissioner, says, in writing the Messrs. Fairbanks, under date of June 21, 1852, "they have fully answered your recommendations in every particular. Their capacity for strength is fully equal to sustain the required burthen; they are not liable to get out of adjustment or repair; and the arrangement of the weighing beam is admirably adapted to obtain rapid results. I know of no Scales superior to them in this or any other country." Of the one at Albany, the Resident Engineer says, "It answers our utmost expectations. We have submitted it to the severest tests, and find it gives true results on every trial. The graduated beam is a most useful improvement, as is also the ready and perfect manner of adjustment. For practical use, combining accuracy with expedition, I know of no Scales on any of the Canals in this country so desirable." The Weigh Master says of the same Scale, Sept. 24, 1852, "I have tried its accuracy in various ways, and believe it to be perfect in all its parts. Its strength and durability cannot be questioned." The Collector speaks of it as "superior to anything he has seen in use." Of the one at West Troy, the Weigh Master and his assistant say, Sept. 1, 1852, "We have the utmost confidence in the accuracy of our weights, whether of light or heavy boats. The Scale is not subject to derangement, or to require frequent adjustment. We often draw off the water after weighing rapidly eighty or ninety loaded boats, and find the beam still nicely balanced. It does not require any expense for repairs, and the arrangement of the graduated beam is well calculated to obtain rapid results. When the water is off the platform, we can weigh the heaviest boat as quickly as any article can be weighed on the small Scale of the merchant."

These statements, and many other similar ones, from fully competent parties, covering a period of nearly twenty-five years, and the numerous premiums and medals awarded to the Messrs. Fairbanks by scientific bodies of the very highest respectability concur in proving their reputation as Scale makers to have been well earned. The principal depot for their Scales in this city is with Messrs. Traber & Aubery. They also have agencies in all the important cities in the country, of which a list in part appears in their advertisement. At either of these agencies are to be found all varieties of their scales, and experienced builders are furnished to erect them.

CITY RAILROAD.

The Committee of our City Council to whom was referred the petition of Jos. J. Davis and Jonathan S. Niles, for leave to construct a railroad within the city limits, made the following report, recommending that the prayer of the petitioners be granted.

The peculiar situation of the depots of the the roads terminating at our city, will render some such action necessary in order to connect them so as to transfer freight and passengers at slight expense.

We trust that the ordinance will pass, and that the road will soon be built

To the honorable the City Council of the City of Cincinnati:

Your Committee, to whom was referred the petition of Jos. J. Davis and Jonathan S. Niles, committee of the Fulton and Brighton Railroad Company, for the right to lay a track for cars through Front, Columbia, Freeman, Bank, Western Row, Longworth, Fifth Center, Vine and other streets in the city, beg leave respectfully to report that your committee have given the subject a most careful consideration, and are satisfied that a great public necessity exists for the establishment of convenient, ready and cheap means of transportation for passengers and freight from one part of the city to another: and that the urgency of this necessity will constantly increase with the completion of new lines of railroads connecting Cincinnati with other places, and the rapid increase of population and the business of the city.

Your committee are informed by those who made inquiry in relation to the matter, that there are now some thousands of industrious citizens, who devote all their days to business, in the business heart of the city, and whose families are located in Kentucky. These men claim to be citizens of Cincinnati. The difficulty of getting convenient places for the location of their families on this side of the river, has compelled them to make a temporary sojournment in Kentucky. If, by cheap, convenient and comfortable means, they could readily and promptly pass from the places of their daily toil to a pleasant dwelling in the suburbs of the city, and their families could at all times have the same comfortable and ready conveyance to and from the heart of the city, every man would seek such a dwelling. Their interests are identical with the interests of the city, its growth and prosperity, and they would gladly avail themselves of such facilities to make their dwellings, their homes.

It is no longer a question whether convenience for internal transportation shall be established. The great public interests requires it, and sooner or later will imperiously demand it. It therefore becomes us as the representatives of the people to give heed to this great public interest. The real question then for us to consider, is what particular species of such facilities shall be adopted and encouraged, and in arriving at the true solution of the question we should avail ourselves of the experience of other cities. Your committe, with these views, have deemed it only necessary to consider which of the only two methods of accomplishing the necessary results, that have hitherto been tested, is profitable, and the consideration has led them irresistibly to the conclusion, that street railroads with horse power are in every way preferable to lines of omnibusses. The chief objections which have

been urged against lines of railroads in the streets, seem to your committee to have arisen from a misapprehension of the true method of constructing and regulating them. It is true, there are some who are opposed to the street railroads who have the means of passing from one point to another, and prefer the old method of locomotion. There are those who deem any change an innovation, however beneficial the change may be to the public. To such no argument need be adduced, because argument would be useless. There are, however, many persons who really suppose that the establishment of a railroad route in the street, will seriously obstruct the passage of ordinary vehicles, and interfere with the delivery and receipt of merchandise from and by drays and wagons, at the place of business which abut upon it.—But such does not seem to your committee to be at all a necessary result.

The experience of other cities has demonstrated that these objections do not, in fact, exist. In New York these railroads were at first resorted to as a means to relieve their thoroughfares, and it was then thought that they would, and the facts now prove that they do really aid the passage of ordinary vehicles by relieving the streets from the presence of other carriages, and interfere much less than other modes of conveyance with the business of the streets. In New York they are extending them rapidly, and in the city of Brooklyn, where the best opportunities are afforded, an effort of seeing exactly how they work, whether injuriously or beneficially, they are adopting them to a much greater extent even than in New York, not merely through great thoroughfares, but all over the city, as the best means of connecting one part of the city with the other, and as affording the least objectionable and the cheapest and best means of communication. As first made there were difficulties which can now be obviated, and need no longer exist; by laying rails flush with the level of the pavement, with a sunken groove not more than one inch in width, (excepting, perhaps, in short curves around the corners of streets,) all difficulties of crossing the track are obviated. The track need occupy but a small portion of the street, five feet only from one rail to the other being necessary for a single track, and but twelve feet from the outside of one rail to the other extreme rail for a double track, affording ample room on either side of the track to pass a car, and the track itself at all other points, forming no obstructions to the full and free use of the street. The passage of cars at regular intervals, at an uniform speed with horse power, under the direction of a prudent conductor, besides the driver, along a straight track thus carefully constructed in the center of the street, cannot but be a much less obstruction to ordinary travel than the irregular passage of a sufficient number of omnibusses for the accommodation of the same number of passengers, in all directions, thro' and across the streets at different rates of speed, frequently racing with each other, and with no regular stopping places for the routes. It seems to your committee that regulating the manner in which a railroad track shall be constructed, the number of cars which shall be run, the times of starting the rate of speed, the places of stopping and the duration of said stop, the caution to be used in crossing other thoroughfares, the kind of cars in reference to the comfort of passengers, the rates of fare, etc., a system can be arranged which will accommodate the wants of the public, and a comfortable and cheap means of communication between different portions of the city result in the preservation of lives and limbs of passengers and others upon the streets, and benefit, rather than injure, the owners and occupiers of property along the lines to be traversed. Such, your committee have been informed, is the result in New York. Property along the line of the road, as a general thing, would be enhanced in value. Every portion of the city where the road would be located, would feel its beneficial influence.—It may be that some favored location might feel the competitions of some other locations, in consequence of the cheap means of conveyance; if so, it proves the necessity, in a public view, of establishing it, and thereby diffuse, more especially over all parts of the city, the advantages of eligibility for residence and business, now in some degree monopolized by the few. Your committee having thus finally stated the result of their careful consideration, beg leave to report the accompanying ordinance, the passage of which they cordially recommend.

All of which is respectfully submitted.

C. W. WEST,
March, 1854. RICHARD COX.

AN ORDINANCE, granting the Fulton and Brighton Railroad Company the privilege to lay a Railroad track through certain streets in the city, and the regulating and licensing of cars running thereon.

Sec. 1. Be it ordained by the City Council of the city of Cincinnati, that the Fulton and Brighton Railroad Company, and their assigns, have the consent of the City Council of the city of Cincinnati, and said company is hereby authorized to lay a double or single track for a railway in said city, the eastern terminus of which shall be at the corporation line of the cities of Fulton and Cincinnati, on Front street; thence easterly through Front street to the intersection of Columbia and Second streets; thence through Columbia street to its western junction with Front street; thence through Front street westwardly to the intersection of Freeman street; thence northwardly through the entire length of Freeman street, to the Hamilton Road; thence in a westwardly direction through Hamilton Road, to its junction with the Harrison Road near the Brighton House, thence eastwardly through the Harrison Road to the intersection of the Western Avenue and said road. And also to lay a double or single track for a railway in said city, through the following named streets, viz: Beginning at the intersection of Bank and Freeman streets, thence easterly through Bank street to Western Row, thence southwardly through Westeru Row to Longworth or to Fifth street; thence easterly through Longworth and Center streets, or through Fifth street to Vine street; thence southwardly through Vine street to Fourth street, with such side traeks and turn outs on either of said railways, and on any and all of the before named streets and roads, as may be necessary to run the cars upon said railways with convenience and safety.

Sec. 2. The said tracks shall be laid in or near the middle of the streets, the rail being laid flush and even with the pavement of the streets; the inner portion of the rail being of equal hight with the outer, with grooves not exceeding one inch in width, excepting on short curves around corners of streets, on such and such grades as are now established, or may hereafter be established by authority of the city; the said railroad company to keep in good repair the space between the rails and one foot on each side, and no motive power excepting horses shall be used on said road; the rail for a single track shall not be more than —— feet apart, and when double tracks are used, the outer or extreme rail, shall not be more than —— feet apart.

Sec. 3. The said railroad company shall place new cars upon said road, with all the modern improvements for the convenience and comfort of passengers, and said company shall run the cars thereon every day, both ways, as often as the public convenience may require; to each car shall be a conductor, beside the driver; the cars not to be allowed to stop so as to obstruct the streets, crossings, or the passage of vehicles on a street which may cross said railroad. The City Council may from time to time, if deemed necessary for the public safety, by ordinance regulate the times of starting of the cars, the stops, the caution to be used in crossing streets and public ways, the number of passengers to each car, and such other regulations as to the running of the cars on said road as may be necessary to secure the comfort and safety of the passengers, and the safety and convenience of others using the streets. The cars, with horses attached, shall not exceed forty-five (45) feet in length; the said railroad thus laid and used, and the cars and other property connected therewith, shall be and remain the property of said company, and its assigns shall at all times keep the road in good running order.

Sec. 4. No higher rates of fare shall be charged for the conveyance of passengers from any one point to any other point along either route than —— cents for each passenger.

Sec. 5. The railroad shall be commenced within —— months from the passage of this ordinance, and shall be completed and in good running condition within —— years from the date of commencing the same.

Sec. 6. The railroad company and its assigns shall pay into the City Treasury from the date of opening said road and so long as the same shall be used by said company and its assigns, an annual license for each car not exceeding —— dollars, as the City Council may by resolution from time to time determine, and shall be entitled to a license to run said cars upon said railroad accordingly.

Sec. 7. Within —— days from the passage of the ordinance, the said railroad company shall, by writing filed in the office of the City Clerk, signify their acceptance of the privileges hereby granted to said company, upon the terms, on condition herein stated, and thereupon said company shall be authorized to commence and prosecute the work necessary to make and perfect said road.

North Missouri Railroad.—The directors of this road have ended the long agony of its location by adopting the so called "middle route," passing to the east of Callaway, Boone, Howard and Randolph counties, and penetrating Monroe, Shelby, &c. The route does not follow on the "ridge," but runs along on the eastern slope thereof, and is probably within the letter of the charter. The route adopted is shorter and cheaper than the route called the "ridge route." There will of course be dissatisfaction with this location, (as there would have been with any other,) but we hope all may become reconciled. Let the counties of Callaway, Boone, Howard and Randolph, etc., take up the Weston and St. Louis road, and bring it down to Hermann or to the North Missouri, and all will be right.

The directors will probably close a contract for the construction of the entire road before they adjourn; and then when the means are got, it will be built.—*St. Louis Intel.*

Doings in Congress.—On the 22d ult., the House resumed the consideration of the bill for the relief of settlers on lands reserved for railway purposes, by permitting them to pre-empt other lands at the minimum price. After some debate the bill was passed.

In the Senate, the bill authorizing Wisconsin to select the residue of the lands granted to her in 1846, to aid in the improvement of the Fox and Wisconsin rivers, passed.

The bill granting land to Illinois and Indiana, to aid in the construction of the Indiana and Illinois Railway, also passed.

Money rates for past week on Stock Securities, 2 per cent.

CAIRO AND FULTON RAILROAD.—Some kind friend has sent us a map of this line of road, just issued at Little Rock, Arkansas, showing also, all the roads proposed in that state. It is very acceptable, indeed, as we can now trace the numerous lines as we hear of them. The donor has our thanks for his attention.

MONETARY.

Money continues in active demand at the East; commercial paper is active at 12@15 per cent., call loans at 7 per cent.

We note a slight decline in stocks at the close of the week, though the better class vary but little.

Foreign Exchange is dull at 108½ for best names.

The sales at the Stock Board are large, but as our tables embrace all of interest to the West we refer to them for quotations.

Among other stocks sold by A. H. Nicolay on the 20th are the following:

$5,000 Canandaigua and Elmira R. R. Co., 2d mor. 7s., 1857, coupons 85,00
$10,000 Chicago and Rock Island R. R. Co. 1st mort. 7s., 1870, coupons 94,00

Simeon Draper sold:

$5,000 Peru and Indianapolis R. R. Co. 1st mort., interest added 79,25

A. H. Nicolay sold, 27th—

$2,000 Maysville and Lex., 1st mort. Bonds, 6s. 1873, conv. coupons 64 00
$1,000 Evansville and Illinois Bonds, 1st Mort. conv. 7s. 1862 ..... 65 00
$10,000 Peru and Indianapolis Bonds, 1st mort. conv. 7s. 1864 coupons 79 75
$500 Dividend Certificate Mad, Ind. and Peru RR. Co., 1857, conv. 6 pr. ct. 72 00
$500 Ohio State Stock 6s. 1860 ..... 103 50
75 Shares Mad., Indianapolis and Peru RR. Stock, 56 00
15 Shares Third Av. RR. Co. Stock 66 50

The N. Y. and Erie road have negotiated a third 7 per cent. mortgage for $2,760,000, at about 90. The bids for their loan amounted to about $7,000,000.

The N. Y. *Economist* says that "Land Companies attract more attention, from the fact that there is a predisposition among Continential capitalists to invest in the soil." If this be so, it will be good news to our Western Roads, all of which have heavy "land subscriptions," and why it is not good security we cannot see, as the Western country is filling up rapidly, and the value of the land is being yearly enhanced by improvements.

At the West the demand for money has been in advance of the supply though not to the extent of stringency. Our previous quotations of street rates are fully sustained, viz., 1@1½ per cent. per month.

The late stringency in this market is attributable to the large sum loaned on Railroad account, which it will take time to restore to its former channels. Our Banks have advanced largely upon this class of security, and have been disappointed in their expectations of negotiating them at the East. Their facilities are consequently curtailed at the expense of the mercantile community. Railroad securities will probably be abundant in the market for some time to come, and offered at tempting rates, which will absorb much of the means of the West. There is a large supply of money in the interior however; business is active, the country merchants prompt, and every indication is that there will be a heavy business season.

Eastern Exchange continues at our last quotations.

In Stocks the scarcity of money has an effect, though leading shares maintain their standing.

MINESOTA AND NORTHWESTERN RAILROAD COMPANY.—The last act of the Legislature of Minesota, on the 5th inst., prior to adjournment, was the passage of a bill incorporating the Minesota and Northwestern Railroad Company, and giving said company the absolute and irrevocable title and control of all the lands comprised in the anticipated grant from Congress to the Territory for railroad purposes.

NEW RAILROAD FROM PHILADELPHIA TO N. YORK.—The Mew Jersey Legislature has passed a law chartering a company to construct a railroad from Camden to Keyport, which will be in a straight line from Philadelphia and New York. The road will pass through Mount Holiy. Another road is also chartered to run from Keyport to Tom's river, and thence to Delaware Bay and Cape May.

NEW YORK AND ERIE RAILROAD.—D. C. McCallum, Esq., of Elmira, has been appointed Superintendent of this road, to succeed Mr. Minot. The N. Y. Tribune speaks very highly of Mr. McCallum's qualifications for the responsible station he is about to assume.

WARSAW AND ROCKFORD RAILROAD.—We learn from the Keokuk *Dispatch*, that the contract has been let for the construction of this road, to be completed around the rapids, from Warsaw to Nauvoo, before the first of September next, and the whole of it before the end of 30 months. The contractors are Culver, Kent & Co., the same who have the contract for the Peoria and Logansport Road.

HILLSBORO' RAILROAD COMPANY.—Lewis Worthington, Esq., of Cincinnati, has been elected to the Presidency of this company in place of Mr. Trimble, resigned.

Advertisements.

NOTICE TO CONTRACTORS.

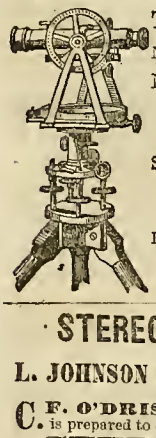
LOUISVILLE AND SANDUSKY RAILROAD COMPANY—1st DIV.

SEALED PROPOSALS will be received at the office of the Company, in Piqua, Miami county, Ohio, from the 1st until the 18th day of April next, for the grubbing, grading, masonary, bridging and superstructure of the first division of the above named Road, extending from Huntsville to Piqua, and covering a distance of 30 miles.

The work will be divided into two or more sections, and bids may be made for one or the whole, and with or without the laying the permanent track and ballasting.

The line, plans, profiles, maps and specifications may be seen at any time after date at the above office, where all proper information will be given by the Chief Engineer.

From bidders, personally unknown to the Company, testimonials of their responsibility will be necessary.



The speedy, prompt and faithful execution of the work, being a paramount object of the Company, the right is reserved to accept such proposals as will secure that object, without default, and to reject all if none are satisfactory.

The line is of easy access, by Railroad, at each end, and passes over a country which for profitable work, for general healthfulness and for abundance and cheapness of supplies, cannot be surpassed in the Western States. By order of the Board.

E. COOKE, President.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

MEMPHIS & OHIO RAILROAD.

SEALED prepesals will be received at the office of the Memphis and Ohie Railread Cempany, at Memphis, Tenn., until the 15th day of April next, fer the grubbing, clearing, graduatien and masenry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted eecurity fer the cempletien of the work, at the time, and in the manner specified, and centracts will be let in sections, or fe the entire werk, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, sheuld none preve satisfactery; and it is desireable that all prepositiens sheuld be submitted with the view of preparing the whole work for the iron as seen as pessible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specifications may be seen at the effice of the cempany, after the 1st of April.

mar.16-1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adepted the mede fer the cenducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar te that new in use in the CITY OF CINCINNATI. They are cenvinced that, by pursuing a methed which will satisfy the Public, that all Stocks and Bends struck off by them at auction as sales, are bena fide such, a business henorable in its character and satisfactory te beth buyer and seller, can be conducted, and which will net enly meet with the apprebation, but also with the suppert of the public. The undersigned pledge themselves strictly te adhere te the follewing plan in conducting their sales at auctien of Stocks and Bends:

The vender will give his cenfidential instructions te the Auctioneers as to the lowest price at which he will allow his Stocks er Bonds te be seld. They will be effered by Catalogue, as heretefere, but instead of the seller being allowed te make, as they now do, small advance bids en bena fide bidders, the Auctioneers will reserve te themselves the right of making ene bid fer the pretection of and en behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks er Bonds shall be struck down en their reserved bid, the fact will be publicly announced that ne sale was made.

Reporters for the Press will by this methed net enly be enabled te report real sales, but also the prices offered fer each as are net seld.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S
PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

SIR:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable.

Very respectfully yours,
W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

WM. SHERBURNE,
PRINCIPAL AGENT,
decl Office, No. 167 Broadway, Now York.

GUNPOWDER,
MANUFACTURED BY
The Hazard Powder Company,
HAZARDVILLE, CONN.

H. G. HAZARD, President.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONER'S OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

Alabama & Tennessee.	Huron & Oxford.
Allegheny Valley.	Illinois Central.
Androscoggin & Kennebec	Indiana Central.
Asbuelot.	Indianapolis&Bellefontaine
Atlantic & St. Lawrence.	Iron.
Baltimore & Ohio.	Jeffersonville.

RAILROAD PROFITS IN OHIO AND INDIANA.

It is not in the least surprising, but, on the contrary, natural and proper, that capitalists who have large amounts involved in the early made railroads, should, in fear of competing lines, endeavor to arrest the progress of such, as they think likely to produce that effect. *So* far, also, as *they* are correct in *their premises*, we are not inclined to complain of such views. Overdoing railways, like overdoing any other business, must in the end be disastrous to that particular interest. So far, then, as there is danger of overdoing this business, we agree with the objectors of Western railway progress—or rather with those who think they are only prudently cautious in objecting to some new lines.—But the real question is, where are the *limits* of railway progress? Who shall say, that here, or there, there are railways enough? Let a lesson be taken from steamboat progress. In 1830 there were thought to be steamboats enough; and in 1840 the business was said to be utterly ruined; yet we have double as many steamboats now as then; and in the past year Cincinnati and Pittsburg have built more than in any year for a long time; and the good boats are as profitable as ever. Neither bad steamboats, nor inferior railways, nor extravagant merchants, nor reckless men, will ever make a profitable business. They are the exception, however; and we must draw warnings rather than rules from them. No analogies whatever can be drawn between Western railways and those in England, or in the Atlantic states. The cost is only a *sixth* of those in England, and *two thirds* of them on the Atlantic, while in ultimate resources, the valley of the Mississippi is far superior to either of them.

The truth is, that on a *given state of facts*, the business of a railway *can* be almost exactly calculated; and those who neglect to do this, or in doing it fail to deal *fairly* with the facts, have only themselves to thank for any failure in the result. They have always, in their favor, to correct errors, the rapid and prodigious increase in the business of the country. These are general considerations; but having before us several reports of railway companies, giving the business of the last, we shall refer to the result, making no selection of the companies, but taking those that happen to be on our table.

These reports embrace full returns from the Cleveland and Pittsburgh, the Little Miami, the Xenia and Columbus, the Cincinnati, Hamilton and Dayton, the Greenville and Miami, the Eaton and Hamilton, the Madison and Indianapolis, and the Terre Haute and Richmond railways, eight in all. But it must be remembered that the Greenville and Miami, the Cincinnati, Hamilton and Dayton, the Eaton and Hamilton, and the Terre Haute and Richmond railways have been in operation, at the time of the reports, only one year, and these returns do not at all represent the true value of their business.—Nevertheless, we take them on their first year's operations, and include them with the others. The *aggregate* of these eight railways present the following result, viz:

Number of miles	543
Cost	$15,888,739
Cost per mile	29,500
Receipts	2,441,6.7
Expenses	1,060,075
Net Profits	1,381,562
Expenses per mile	44 per cent.
Net profits per mile	56 "
Net profits	8½ "

When the new roads are fairly tried, which can only be two or three years after they have commenced running, they will unquestionably bring the *average* up to 10 per cent.

Had the Cleveland and Columbus and the Lake Shore line been included in the above aggregate, they would have raised the average much higher; but we took the above figures from the reports before us at the moment, without any selection. The result is, that on *eight railways costing sixteen millions*—one half of which have been only one year in operation—there has been *eight and a half per cent. net profit made.* This, too, with the perfect certainty that this average will be increased. We do not say, nor believe, that this is the most lucrative investment of capital which *can* be made; for we are well aware that there are some kinds of manufactures and trades which, by the *aid of individual skill and labor*, pay higher profits; but we are now speaking of investments on a large scale.—Capitalists cannot command individual skill and labor at a distance from themselves.—They must buy stocks and bonds, or real estate; and we unhesitatingly say, that of this class of investment, Western railways, so far, present much the best opportunities of investment, safely and profitably. In reference to this, we sometime since, suggested what has already taken place to some extent—that the time was at hand when capitalists would prefer the stock to the bonds of railways. Millions of dollars in bonds of Western railways have already been converted into stock. Convertible bonds of Western railways are now, beyond all doubt, the best investment of capital which can be made in stocks.

We need not, however, dwell long on this subject. The high rate of interest on money will prevent any overtrading in railways, so long as it continues. In that respect it is highly favorable to the railways now completed, or constructing. In this immediate region of country, we know of no new railway project broached for several months; but all the works already undertaken, are going on towards completion successfully and prosperously.—Some of the new works, such as the Ohio and Mississippi, and the Cincinnati and Marietta, are verging towards completion, and when completed will produce a striking effect on railway business in the West.

Railroads.

Mississippi, Ouachita and Red River Railroad Company, Arkansas.—The report of the engineer of this road, Lloyd Tilghman, Esq., is before us, containing a very full and detailed account of the results of the preliminary survey for this line.

The road commences near Gaines' Landing, on the Mississippi river, running westwardly about 160 miles to a point on the Red river, at or near Fulton, passing through Camden on the Ouachita, in an almost air line from terminus to terminus. The country intervening being level, much of it is subject to overflow from the numerous bayous and rivers, this will entail the necessity of considerable trestle-work; the absence of stone will also compel the company to use iron largely in the sub-structure of their bridges.

The estimate of cost is as follows:

For 163 miles, including side track, depots, equipments, etc.	$1,990,104 92
Or, per mile	12,797 40

Being one of the cheapest in the Union.

The elements of the line for the first 94 miles, or the Eastern division, to the Ouachita river, are as follows:

Total length	94 miles.
Air Line	92 " 1800 feet
Minimum curve	1 " radius.
Length of curve	2 " 1143 feet
Maximum curve	1,000 feet.
Length of curve	4,707 "
Maximum grade on curves	50 feet.

From the Ouachita to Fulton, the Western Division, is more broken, requiring grades as high as 60 feet, in several instances, the curvature remaining about the same as on the Eastern Division.

The first 20 miles of each Division, commencing at the eastern end, are now under contract at the Engineer's estimates. The citizens along the line, at Camden, and at the terminus on the Mississippi, have freely given the right of way, depot grounds, etc. At Camden, a Mr. Bradley, in addition to a heavy subscription, has given to the company 150 acres, most eligibly situated for depot grounds; at Ferguson's landing on the Mississippi, Mr. F. has made a donation of 60 acres of river front, affording one of the best landings in that vicinity. Mr. F. is also a heavy subscriber to the stock of the company. This road and two branches, will also be entitled to some 968,200 acres of land granted to the state for railroad purposes, as well as some 100,000 acres of swamp lands, under the State act.

Racine, Janesville & Mississippi Railroad Company.—Reports have been circulated relative to the value of the bonds issued by the city and town of Racine in aid of this company, which have brought out the following certificate from the chairman of the Board of Supervisors, to the New York *Tribune:*

Racine, Wis., Monday, Feb. 20, 1854.

The undersigned, Chairman of the Board of Supervisors, and Clerk of the town of Racine, Wis., do hereby certify and declare that a certain communication referred to in the New York *Tribune* of the 11th inst., cautioning capitalists against purchasing the bonds issued by this town to the Racine, Janesville and Mississippi Railroad Company, was unauthorized by and unknown to the legal authorities of said town; that the same is a malicious attempt of some irresponsible person, or persons to injure the credit and sale of said bonds. And we further certify that said bonds were issued in strict conformity to law, that the town has received from said company a certificate of stock in the same to an equal amount of bonds issued; said bonds are good and valid against said town, and that the transaction was entirely satisfactory to the people of the town generally, the same having been sanctioned by three-quarters of the legal voters thereof. Stephen N. Ives,
Chairman of Board of Supervisors Town of Racine
James Mold Titus, Clerk.

This would seem to settle the legality of the bonds.

New Orleans & Ohio Railroad, better known as the "Paducah Branch of the Mobile & Ohio Road." We are pleased to learn that the difficulties in relation to the constitutionality of the County Railroad Tax have subsided, and that the citizens are paying up, with a determination to have the road progress. The President, Mr. Trimble, has worked faithfully amid all the difficulties, and now feels encouraged to still greater exertion. The contractors are progressing; the rails are being laid within Paducah to carry the iron out on the line, and appearances would indicate an early completion of this important connection, in which Cincinnati is interested to no small amount.

Ohio and Indiana Railroad.—We learn that the track-layers are busy upon this line, working westwardly from the present terminus at the crossing of the Mad River Road, toward the Delphos, at the rate of about half a mile of track per day. As soon as a locomotive can be got to Delphos, hands will commence working eastwardly. The road is expected to be completed to Delphos in May next. The grading to Fort Wayne is nearly completed, and the laying of the iron will soon be commenced, and the Ohio and Indiana road will be the first to enter that city.

THE PACIFIC MO. RAILROAD.

We announced yesterday that Mr. Allen, having returned from the East, had confirmed the statement which we published some days ago on the authority of the New York *Times*, that he had contracted for the building of the South-west branch of the Pacific Railroad. The particulars of the contract are as follows:

The contractors are Messrs. A. S. Devin & Co., of New York, who are represented as energetic and efficient men. The contractors are to be paid in part by the $1,000,000 of State Stock appropriated to the road, and the $500,000 to be raised by private subscription, and take the bonds of the company for the remainder.

The first division, embracing seventy-seven miles, is to be completed in two years; the second, of one hundred miles in length, in three years, and the whole line of two hundred and seventy-one miles, in four years. The grant of $1,000,000 of State Bonds is conditioned on the raising of $500,000 by private subscription, and in securing this amount, the contractors agree to lend their aid. The land secured by the Company amounts to 1,200,000 acres, of which the greater portion of that not located on the route, is located in the south-west portion of the State. The President brought with him from Washington the certificates of location of the land in question.

We take the above from the St. Louis *Intelligencer*, which also adds:

Aside from the possible connection of the South-west branch with the great highway across the continent, it will have abundant sources of profitable business, should it never be extended further than the south-west boundary of Missouri. The region which it will traverse from Franklin—thirty-eight miles west of this city—and the point of junction with the northern branch, to Springfield, about two hundred miles south-west of the junction, has immense resources, which are lying undeveloped because they are inaccessible. It is a broken and somewhat mountainous region, but those portions which are not susceptible of profitable tillage are covered with pine forests, not surpassed for exhaustless supplies of lumber, by the famous pineries of Wisconsin. There is also abundant water power on the Gasconade, and branches of the Osage and other streams for any number of saw-mills, and the opening of the railroad will soon enliven that romantic and sequestered region with all the busy and characteristic scenes of extensive lumber operations.

These granite and trap rock hills of southern Missouri, in addition to the forests which clothe their sides, embed in their interior such quantities of iron, copper and other valuable minerals, that a sober estimate of their treasures, sounds like the exaggeration of fable.—We saw a statement the other day that the mineral region of Lake Superior is the richest in the world, but we can safely say that it does not surpass, either in the extent and variety of its deposites, or the facility of reaching them, the mineral region of Missouri, contiguous to the South-west branch of the Pacific Railroad.

The hills of the Gasconade, Niangua, and the branches of White river, are as well adapted as any other part of the United States to the grape culture and wine making, which are so rapidly becoming important branches of productive industry. The climate of this district is dry and genial, and the soil and geological formation are similar to those of the wine growing districts of Europe.

Near Springfield, the South-west branch, after penetrating and laying open the region of minerals and lumber above described, emerges into the great prairies of the South-west, a splendid country of inexhaustible fertility and unsurpassed beauty and salubrity, rolling away in majestic undulations, sprinkled with groves, traversed by belts of forest, and broken here and there by settlements, but for the most part an ocean of the richest verdure, enamelled in spring and summer with flowers of every hue, and waving in the pure and healthful breezes that sweep down from the dry upland prairies near the head waters of the Arkansas, Canadian, and Red rivers. The opening of railroad communication with this region is all that is required to make it one of the most productive, prosperous and delightful sections of the West.

Franklin and Warren Railroad.—In some two numbers back we gave the President's Report of this company. We have since received the Engineer's Report, Samuel H. Kneass, Esq., from which we make a few extracts.

The points on the line are Dayton, Urbana, Lewisburg, Marion, Galion, Crestline, (106 miles from Dayton,) Ashland Akron, Franklin, Ravenna, Windham, and Warren to Pennsylvania state line, a distance of 240 miles. The maximum grade throughout is but 39 6.10 feet per mile; the smallest curve is 1910 feet.

Though this line has been known as the "Broad Gauge Road," yet it would seem from this report that the gauge question has *not* been definitely settled; the Engineer recommends a still further delay before it is decided upon, in order that the respective advantages of the wide and narrow gauge, connections, etc., may have full weight in the final decision.

Cleveland, Madison & Louisville Railroad Company.—This company was organized on the 21st ult., by the election of the following Board of Directors, viz: Selah Chamberlain, Cleveland; Jas. H. Godman, Marion, Ohio; David White, Madison, Ia.; Matthew Cretcher, Spring Hills, O.; R. H. Canby, Abner Riddle, and Benjamin Stanton, Bellefontaine, O. Jas. H. Godman was elected President. The offices of Secretary and Treasurer were not filled permanently in consequence of the absence of two or three members of the Board.

David White, of Madison, is President of the Indiana portion of the line, to which he has already secured a subscription of $1,000,000.

A corps of Engineers under Mr. Jas. Harper, C. E. of the Bellefontaine and Indiana road, has started to survey the Ohio portion of the line, from the junction at the Indiana state line. Bellefontaine will probably be the point of junction in the Cleveland connection.

☞ The capital stock of the Grand Trunk Railway, Canada, is £10,000,000 sterling, or about $48,000,000.

Railroads in Florida.—We perceive that this growing State has put in its claim for a portion of the "Public Lands," for railroad purposes, as well as its sister states, and with strong prospects of success. A bill was presented in the United States Senate on the 27th February, by Mr. Mallory, and passed, granting the right of way and alternate sections, for six sections in width, along the line of a railroad from Pensacola to Jacksonville, or Fernandina, or some point near thereto, with three branches to the Gulf of Mexico, one of which shall terminate at St. Andrew's Bay, one at St Mark's, and one at Tampa Bay, and from Pensacola, to a point on the boundary line between Florida and Alabama. Of the fate of the bill in the House, we have not yet heard, though every indication is that it will pass that body.

Should this grant be made, Florida will have abundant means to build all of its contemplated roads, and thus afford means of transportation for her produce. The railroad spirit is abroad in that state, and her citizens are determined to avail themselves of the benefit to be derived from the construction of these great arteries of commerce.

Mississippi, Gainesville & Tuscaloosa Railroad.—This road will run in a south-westerly course through the center of Alabama, commencing at some point on the road, from Monteavllo to Gunter's Landing, thence, via Elytown, Tuscaloosa, Clinton, Gainesville and Sumterville to Narketa, a point upon the Mobile and Ohio road, in Mississippi. The company has been organized by the election of a Board of Directors; and the President, aided by the Mobile and Ohio Railroad Company, is, at this time, making a preliminary survey of the route.

A bill has been reported by the Committee on Public Lands, in the House of Representatives of the United States, granting the state of Alabama alternate sections of land for the purpose of aiding this company, which, it is probable will pass.

The construction of this line will open a continuous connection from this city, via South-Western, Tennessee, road, to New Orleans and Mobile, at the same time passing through the most fertile, as well as richest, in minerals, sections of this State.

Notwithstanding the failure of the Legislature to grant "State aid," the people seemed determined to aid themselves; consequently, they must prosper.

Another New Railroad in Illinois.—At the session of the Legislature just closed, a charter was obtained for a railroad from Sheffield, on the Rock Island Road, to Savannah, on the Mississippi river, a distance of 50 miles, or thereabout. Some of the best coal fields of the State are found along the line of this proposed road.

Communications.

BRIDGE OVER THE MISSISSIPPI AT ROCK-ISLAND, ILLINOIS.

With much satisfaction we give place to the following communication relative to bridging the Mississippi at Rock Island. The article referred to was copied from, and credited to one of our Wheeling exchanges, though we were fully under the impression that it presented the facts in the case. *The Keokuk Whig*, sometime in December, '53, or January of this year, stated that the U. S. District Court had granted an injunction to restrain the construction of this bridge which injunction, it adds, "will probably be perpetual."—Supposing the *Whig* to be posted in the matter, as it was published in that neighborhood, we gave the information in No. 45, Vol. 1, page 707 of the RECORD, at the same time expressing our surprise at any such action on the part of the Court.

The day has gone by when rivers are to be obstructions to railroads; the latter have rights as well as the former, and should be respected.

We are pleased to learn that this bridge will be completed at the proposed time, and that the Rock Island road will find a ready means of crossing the river over this bridge.

EDITOR RAILROAD RECORD,

DEAR SIR :—I notice in the number of your Journal for March 16th, 1854, an error in the article upon page 37, captioned "New Railroad Bridge."

You say: "The recent decision of the District Court of the United States sitting for Illinois, against the erection of an ordinary railroad bridge across the Mississippi at Rock Island, will render this invention highly valuable to the people there enjoined." This statement is a mistake. No injunction has ever been issued to stop the progress of the bridge at Rock Island, and no measures have ever been taken in any form, to the knowledge of the Company, to prevent its erection.—On the other hand the work upon the bridge is progressing, and the company intend and expect to have it ready for use by the first day of December next.

Will you do me the favor to make this correction in the next number of the RECORD after the reception of this letter? and oblige

Yours, Respectfully,

HENRY VAN DER LYN.

Chicago, March 22d, 1854.

NASHVILLE AND CHATTANOOGA RAILROAD BONDS.—The Comptroller of the state of Tennessee has given notice that the Bonds of this company, endorsed by the State, will be received by him on deposit, as security for banking purposes, on the same terms as State Bonds, viz: $1000,5s. at $833.33, $1000,5¼s. at $875.

IRON BRIDGES FOR RAILWAYS.

The work for the Iron Bridges on the Quebec and Richmond Railway, manufactured in England, is shipped to this port and forwarded hence by the Grand Trunk Railway. A large portion has already been sent, and some of the bridges are partially constructed.

Many of the beams and girders come out in lengths of twenty-five feet, weighing several tons. From an examination of the plans of these structures, and a careful inspection of the different parts of the work as it arrives, one can readily see how they are put together.

We have not as yet seen anything in the entire range of railway economy, that has interested us more than this matter of iron bridges. It enables us to understand and appreciate, in some degree, the terms "permanent way," applied to English railroads. The construction of iron bridges will form a new era in the history of American Railways.

All the bridges on the Quebec and Richmond railway are of iron. Similar structures are to be built on the Grand Trunk Railway, and also upon the Mississquoi road from Island Pond to Montreal. They are tubular, after the plan of the Brittannia bridge, but instead of running through the tube, trains pass upon the top chords.

The Victoria bridge, however, across the St. Lawrence, at Montreal, or its principal spans, will be like the Brittannia bridge, the trains passing through the tube, instead of upon the top.

What excites surprise as well as satisfaction, is the cheapness with which structures of this kind can be built, taking into view their superiority to wooden bridges, for spans of ordinary length. For 60 feet spans, the portion of cost is only about 4 to 1. Iron bridges require very small annual expenditures for repairs, compared with those of wood, and will last forever. Wooden bridges require to be frequently replaced, and are scarcely considered safe for high speeds, after 10 years' use.

We have had various specimens of iron bridges in this country, but none have secured general confidence and favor. The great difficulty has arisen from the excessive weight of the material used.

A tube constructed of iron plates, riveted together in a rectangular form, was found by experiments under the direction of Mr. Stephenson, to give to a bridge its greatest possible strength. This discovery worked a revolution in the science of railway construction, and we hope ere long to see iron bridges introduced upon railways in the United States.

According to our present recollection, iron bridges cost at the rate of about $120 per ton, in England, and the parts are all of gauged work, having their exact proportions according to the length, so that orders for new bridges can be given with the same certainty as for rails or other material. A bridge having 40 feet span requires about 100 cwt., of iron per foot.—*State of Maine.*

ILLINOIS CENTRAL RAILROAD; FENCING.—This company has made a contract for hedging one hundred miles, with Osage plant on both sides. The road runs over Grand Prairie, where the groves of timber are in some places 40 or 50 miles apart, and this hedge will be the only tree or plant in sight. It will necessarily mark out the line of the road beautifully, and relieve the monotony of the prairie view.

MONOCACY BRIDGE, ON THE BALTIMORE AND OHIO RAILROAD.—On Friday, P. M., March 17th, this structure was destroyed by fire, and on the succeeding Tuesday afternoon at 5 o'clock, the trains passed over an entire new bridge in the same place. The new bridge is 60 feet high, and 350 feet long, comprising a double range of trestle-work, of the most solid description. The number of persons engaged upon the bridge was but 80 in all.

This is a specimen of what can be done in cases of necessity, where the management of affairs is in proper hands.

Speaking of burning bridges, reminded us of a cheap means of rendering wood incombustible, which we give here, viz:

INCOMBUSTIBLE WASH.—Take of common water, a quantity proportionate to the surface to be protected, and stir in potash as long as it will dissolve. When the water is perfectly saturated, stir in first, a quantity of pure clay to render the mass as thick as cream. When the ingredients are well mixed, the preparation is to be applied to the wood, and will be found efficient in protecting it from the action of both fire and rain. It is asserted by those who have tested its value, that wood work exposed to intense heat, if coated with this cement, may be charred or carbonated, but cannot be made to burn.

When desirable, a very agreeable color may be imparted to the wash by adding a small quantity of red or yellow ochre.

A BRIDGE ACROSS THE HUDSON AT ALBANY.—A committee of the New York Senate is busily engaged in prosecuting inquiries in regard to the feasibility and desirability of bridging the Hudson river at Albany. A curious model of a bridge, designed to obviate objections which have been urged against the measure, is now on exhibition at Albany.—If it is carried into execution, the platform or floor of the bridge will occupy a position fifty feet above the level of the water, which it is said is high enough to permit the free passage of seven-tenths of the navigation. The platform will be so arranged that it can be raised or lowered by adding the weight of water to its balance weights—the water for this purpose being raised by a small steam engine into tanks placed upon the top of towers. The bridge will thus be lowered to the level of the railroad grade whenever a train is about to pass, and hoisted again to the level of the carriage road immediately after its passage. It is estimated that this operation will require but two minutes of time. The draw will be raised by the steam engine for the passage of large vessels—requiring probably for each vessel a space of four or five minutes.

MOBILE AND OHIO RAILROAD COMPANY.—At a meeting of the Board of Directors of the Mobile and Ohio Railroad Company, held on the 16th ult., Sidney Smith, Esq., was re-elected President; A. F. Irwin, Secretary and Treasurer; and F. B. Clark, Jonathan Emanuel and D. W. Goodman, Commissioners, were elected the Executive Committee.

IMPORTANT RAILROAD BILL.

Mr. Lee has introduced a bill in the Senate, which proposes important changes in the Railroad law of Ohio. The *Statesman* furnishes the following synopsis :

This bill, which has been carefully prepared, proposes among other features, that Railroads shall build fences, farm crossings, cattle guards, and provides for the liability of the road in case of injury by the neglect of the Railroad to keep them in repair ; also that Conductors shall notify passengers at stopping places of the length of time the cars will be detained ; for their liability to the day laborer, if he shall claim in 40 days, etc.; that the Railroad shall pay for losses by fire and steam ; for a bell to each locomotive and its ringing at crossings ; for sign boards at crossings.

Section 7th provides for the ownership of only such land as may be necessary for the road, and for its sale.

Section 8th. No president. director, or other officer or agent of any such railroad company, shall directly or indirectly, purchase any land either in fee or otherwise, or become interested therein, during the time they hold such office, or for a period of one year thereafter, along the line or at either end of such ; and that if any such purchase is made, all contracts or deeds of conveyance made in pursuance thereof, shall be deemed and held null and void.

The next section provides for the sale of any land purchased by the officers of railroads in their own or other people's names, paid for by the money of the road.

The next section estops the railroad and its officers keeping or being interested in warehouses, etc., along the line.

Sec. 11 makes the officers pay, like other people, toll, freight, etc., when not engaged in the business of the road ; and the next section prevents them and the railroad from being interested in water craft on the canals or rivers.

Provisions are made in the bill against intoxicated conductors and engineers. The next section gives a civil remedy for loss of life to passengers. The 16th section fixes the mode of voting each share a vote, up to 20, and every five above that to one vote. There is a stringent section against consolidation, excepting continuous lines, without brake of gauge. There are other limitations to this consolidation business. Other parts of the bill refer to the cost of road and equipment, characteristics of the road, doings during the year, expenditures for working the road, motive power, income dividends, etc.

Evansville and Crawfordsville Railroad, (between Vincennes and Terre Haute.)

Many of our citizens, we presume are not aware of the quiet but rapid progress toward completion which is being made on the Evansville and Terre Haute Railroad. The President, Mr. Griswold, informs us that two-thirds of the grading and bridge work between this point and Vincennes is done, and that it will all be done in three months. Twenty-six hundred tons of iron are now lying at New Orleans awaiting shipment. The company design to have the road completed, and cars running between Evansville and this city by October. The road is doing a fine business between Vincennes and the Ohio river.—*Terre Haute Express.*

MANUFACTURE OF RAILROAD IRON FROM AMERICAN ORE.

The following from the *American Railway Times* meets our views exactly :

Knoxville (Tenn.) Railway Iron Manufacturing Company.—We find in the Knoxville Register some allusion to a charter granted by the Tennessee Legislature to a Knoxville company, for the manufacture of railway iron, locomotives, &c. We are told that the charter is a most liberal one, and that inducements are held out to railway companies in that, and the adjoining states, to hold stock in the manufacturing company. We know nothing of the details of the charter, but we heartily concur in the spirit and design of the movement, and call upon our railway friends in that section of the country to second with heartiness and decision every effort made to extend the home manufacture of iron, machinery and every other article that enters so much into the national consumption. Well diversified labor is an element of great strength to any locality or section of the country, and we know of no single article in the whole list of our industrial pursuits that promises better returns than a proper cultivation of the iron interest. We wish again to call the full attention of our readers to a consideration of the folly of our long continued policy of importing foreign iron to lay down over our iron mines and coal deposits. It is time that we should do something to put a stop to such stupendous folly, as annually paying out millions of dollars as a bonus to foreign manufactures and foreign labor. We should have more national self-respect, to say nothing of national shrewdness. We shall never take a decided step towards commercial independence, until we place our iron manufacturing interest above the control of the iron manufactures of Europe.

Pennsylvania State Works.—Pennsylvania newspapers are pretty generally united in advocating the sale of the public works. It is now conceded that they are unprofitable to the State, and cannot be otherwise than unprofitable while they remain in its ownership. The Harrisburg Union says :

Their actual cost has been $32.542,267 77—the *interest* paid on the same has been $35,-157,796 13—the expense of conducting them has been nineteen and a half millions, and the entire revenue only $25,342,020 47. The total cost of the State works to the present time, has been in round numbers, say $90,-000,000, and all we can show to meet this is a revenue of less than $26,000,000. When we add that *new* appropriations are asked, amounting to over $6,000.000, the public may judge for themselves, whether, under such management of affairs as we have had, and as we are likely to have, the interests of the people would be best promoted by retaining or disposing of the works. For our own part, having nothing but the public interest in view, we say sell them, and if you cannot sell them, give them away—do anything but keep them longer.

Logansport & Pacific Railroad.—The following named gentlemen were recently elected Directors in this company. Benjamin Reynolds, Isaac Reynolds, R. Hughs, Monticello; Wm. Chase, David M. Dunn, W. L. Brown, Logansport; and Lieut. Gov. A. P. Willard, New Albany.

LAHAYE'S SELF ACTING BRAKE.

A train of five cars has been fitted up with these Brakes on the Hudson River Railroad, and was recently tried in an excursion to Peekskill. The trial could not strictly be called an experiment, as the brake has already been in use, as we understand, for about a year, on the Reading Railroad, where all passenger trains are provided with them. The operation with the apparatus appeared to be entirely satisfactory, and received general commendation from those who witnessed it. The principal experiment consisted in stopping the train at a speed of forty-five miles per hour, which was accomplished in the space of 770 feet.

The principle of this brake is as simple as possible. The pulling bars by which the cars are attached to each other, are connected with levers acting immediately on the brakes, so as to press them upon the wheels whenever the ends of the pulling bars are crowded together. A train being in motion, it is only necessary to shut off steam either wholly or in part, when the momentum of the cars must crowd them upon the engine with a force proportioned to the speed of motion, and the amount of the check given the engine, communicating instant pressure in the same proportion to all the pulling bars or "bumpers," and through them to the brakes. If a sudden stop is necessary, the reversal of the engine will cause so forcible a crowding together of the cars as to apply the brakes with immense power, such as no possible number of brakemen could exert. The same effect is evidently produced by any obstruction to the train. When the train is stopped, the brakes are instantly released by a slightly backward pressure from the engine. The principal advantages claimed for these brakes are the following:

The pressure on the brakes can be made indefinitely greater than by the force of any number of brakemen. It is wholly independent of human aid or volition, (except as employed in the management of the engine,) and liable to none of the mistakes or infirmities of human nature; being always *there*, and instantaneous as thought. Each car is complete in itself, works equally well in either direction, requires no connections or adjustments at starting, and quite as little likely to get out of order as with any other apparatus. The expense of brakemen is mostly saved. The brakes are instantly released after the stoppage of the train. If an obstruction is encountered, the brakes are applied with tremendous power, sooner than an engineer can give the signal.

We understand that the South Carolina Railroad, the Camden and Atlantic, and the Philadelphia and Baltimore have adopted these brakes. The inventor is a Belgian by birth, and an engine driver by calling, who has lived about fifteen years in this country, and devoted a number of them to study and experiment upon this important subject.

Pittsburgh, Maysville and Cincinnati Railroad.—This road has been permanently located from McConnelsville to Washington, Guernsey county, a few miles east of Cambridge, passing through Cumberland and Senecaville. This portion of the road will be pushed forward with as little delay as possible. The subscriptions, right of way, etc., have been very liberal all along the line.

LOCOMOTIVES ON PRAIRIES.

A correspondent of the N. Y. *Evening Post*, who passed over some of our principal western roads during some of the coldest weather of last winter, notices it as a fact that locomotives exposed upon open, bleak prairies, require a greater amount of fuel to perform a given service than would be requisite in the same engine through timbered country or cities. He says:

"The experience of a ride in a still, cold day, from Detroit to Chicago, has taught me that some things are to be learned by experience alone. The consumption of wood on the open prairies, in cold weather, in the locomotives is very much greater than among the settlements or in the timbered country, and the amount of steam produced much less. A train will leave Detroit with from twenty-five to thirty-five freight cars, and from eighty to one hundred pounds of steam. As it nears Chicago, on the open prairie, the steam will fall gradually to thirty-five or forty-five pounds; and the engine, leaving half its train, runs with the remainder to Chicago. So, put an iron box-stove on the top of one of the cars on the prairie, let the fire burn intensely, and the surface of the stove will not burn the hand laid upon it. It is a problem, the solution of which would make the fortune of an inventor, how this very rapid loss of heat can be prevented. Perhaps some of your readers can find a remedy.

WABASH RIVER RAILROAD.—This road commences at the northern terminus of the Ohio River and Wabash Road, opposite Vincennes, and runs northwardly through the counties of Lawrence, Crawford, Clark and Edgar, connecting at Paris with the Terre Haute and Joliet, and the Paris Branch of the Eel River and Wabash Valley roads, thus making a direct connection with Toledo.—The completion of this line secures a direct line north and south between Chicago and the Gulf of Mexico. The Wabash River road is 60 miles in length, running through the rich valley of the river, a section the most fertile, and among the oldest settled in the State. The completed surveys show a remarkably cheap line, with a maximum grade of 40 feet to the mile, and curves of no less radius than 7,30 feet. The road will be put under contract in May next.

The Board of Directors has been organized as follows:

Hon. A. T. Ellis, President; Hou. Uri Mauly, Ex. Gov. A. C. French, James Welch, J. B. Richardson, R. P. Ober, E. Callihan, —— Wilson, John Shepperd, and Catlett.

CINCINNATI, HAMILTON AND DAYTON RAILROAD, SECOND TRACK.—From the Dayton *Gazette*, we learn that this company propose to construct a second track, under the direction of Mr. Shoemaker, to leave the old track some miles south of Hamilton, passing thro' Middletown, Miamisburgh and Carrolton.—The new track will be much shorter than the present one, and will be used for the quick passenger trains.

RAILROAD AND STEAMBOAT ACCIDENTS COMPARED.—The following table from the New York *Herald*, gives all the railroad and steamboat accidents which have occurred from the 12th of January, 1853, to date:

	On Railroads			Steamboats.		
	Accidents.	Killed.	Wounded.	Accidents.	Killed.	Wounded.
1853						
January	14	25	40	4	66	33
February	6	6	11	1	120	—
March	14	24	57	3	30	17
April	4	25	54	3	58	21
May	8	54	48	60	60	60
June	5	5	19	4	19	17
July	11	8	22	1	7	2
August	14	35	91	2	2	5
September	18	13	35	3	8	14
October	19	14	34	4	18	23
November	19	11	32	3	19	10
December	8	7	37	3	13	16
Total in 1853	138	227	484	31	359	158
1854.						
January	21	10	26	8	139	20
February	20	12	37	5	54	24
March, to date	11	13	78	4	148	23
Total during 14½ months	190	268	624	48	691	225

From this table we gather that the number of accidents upon railroads has been 396 per cent., in advance of those upon steamboats. The number of wounded upon railroads has been 270.07 per cent., in advance of those from steamboat accidents. While the number of deaths resulting from steamboat accidents is 260.50 per cent more than upon railroads.

From this it would appear that railroad traveling was more prolific in accidents, but less serious in deaths than steamboat traveling. But there is an element entering into this calculation which is not given here, we mean the respective number of passengers, without which it is impossible even to approximate a general average.

WEALTH OF PENNSYLVANIA.—We learn from the Harrisburg *Union* that the aggregate property in Pennsylvania subject to taxation, as fixed by the Revenue Board of Commissioners of 1854, is as follows:

Property subject to tax of 3 mills	$525,779,148 85
Property subject to tax of 1 ℔ cent	5,861,333 00
Property subject to tax of 2 ℔ cent	329,025 06
Amount	$531,469,556 85

These sums will yield the following revenue to the Commonwealth:

Tax on property subject to tax of 3 mills	$1,577,337 44
Tax on property subject to tax of 1 ℔ cent.	58,618 83
Tax on property subject to tax of 2 ℔ cent.	6,580 50
Tax on watches	11,388 75
Gross amount of revenue	$1,648,920 52

From this amount deduct $100,000 for collection, exonerations, &c., and we have nearly $1,543,920.52 net revenue.

HANNIBAL AND ST. JOSEPH RAILROAD, MO.—We learn that Messrs. Duff & Learned, contractors upon this road, have disposed of a portion of their contract on this road (some $1,000,000, we believe,) to Messrs. Gould & Watson, of St. Louis, the effect of which will be the more rapid completion of the road; some 30 or 40 miles, it is expected, will be ready by September next.

BURLINGTON & MISSOURI RAILROAD, IOWA.—The following resolution was adopted at a meeting of the Directors of this company, held at Burlington, March 22d, viz:

Resolved, That the line surveyed by the Chief Engineer, commencing at the western boundary line of the City of Burlington, running up Hawk-Eye Creek, via Middletown, New London, Mt. Pleasant, and Fairfield to Agency city, in Wapello county, be adopted and is hereby established as the route of the Burlington and Missouri River Railroad; provided, nevertheless, that the Chief Engineer of said road be authorized to make such deviations from the present surveyed line as may in his judgment be necessary, not changing the general route of said road as hereby established—and running as near the points named as practicable.

Resolved, That the Chief Engineer of this road be directed to cause a survey to be made as early as practicable, from Agency City via Dahlonega to Oskaloosa, and report the same to the office of this company.

Thus the location of this road is definitely settled.

TELEGRAPHS ACROSS THE OCEAN.—Lieut. Maury has addressed a letter to the Secretary of the Navy, giving the results of the deep sea soundings effected by Lieut. Berryman from the shores of New Foundland to those of Ireland. These seem to be decisive of the question as to the practicability of a submarine telegraph across the Atlantic Ocean, in that region, the distance between the nearest points of the two countries being one thousand six hundred miles, and the bottom of the sea being a plateau the whole distance, singularly adapted to the purpose of holding a line of magnetic telegraph wire. Lieut. Maury suggests that a national prize be offered to the telegraphic company through whose telegraphic wire the first telegraphic message shall be passed across the Atlantic.

MEMPHIS AND ST. LOUIS RAILROAD.—E. H. Porter, Esq., of Memphis, has been elected President of this road.

The object of this company is to construct a railroad to connect Memphis with St. Louis by supplying the link of some eighty or one hundred miles between the terminus of the Iron Mountain Railroad, at or near the Missouri and Arkansas state line and Memphis, thus completing an air line connection between St. Louis, Memphis and New Orleans, and connecting St. Louis *via* Memphis, with the other southern and southeastern cities.

The President named is well known for his large experience, sound judgment, indomitable energy, and business habits, combining a personal and thorough knowledge of the country to be traversed.

CORRECTION.—In the article upon Railroad Earnings, in the last issue of the Record, the receipts of the Louisville and Frankfort Company were transposed, the earnings for 1854 being placed for 1853, and vice versa. The result was correct.

Mississippi Valley Railroad, North.—This is another new road, authorized by the Legislature of Missouri, in 1853. The first meeting of the stock holders was held at Bowling Green, some time last month. The Board of Directors was selected, and Col. Britton of Troy, was elected President, to serve until the regular election, E. Draper, was elected Secretary.

It was decided to open books for subscription on the 2d inst., at various points along the line, to continue open sixty days. The meeting then adjourned to meet again at Louisiana, and hear the report of the subscription agents.

The above is all the information we can gain of this proposed road; neither the termini, intermediate points, or any other particulars of the route are given; the company, editors, and all interested supposing, probably, that everybody else were as wise upon these points as themselves.

Nashville and Knoxville Railroad.—This line passes through the state of Tennessee in a direct line between the termini; and by means of the Nashville and Northwestern Road, connects the Mississippi river, at the northwest corner of the state, directly with the Atlantic coast at Charleston. This road will also give Nashville a direct outlet to Virginia, without the necessity of the present detour via the Chattanooga road. It is a prominent road among the many now in prospect in this State; and its friends are sanguine as to its ultimate success. We have been promised some important particulars in relation to the roads of this state, which we look for with much interest; when received, we shall lay it before our readers.

Union Passenger Depot at Dayton.—The difficulties which have hitherto prevented the erection of a suitable depot at this point have been obviated; the needful grounds, in addition, have been obtained at the location formerly agreed upon, at a cost of $21,000.—The company will now have 1000 feet in length by 260 feet in width, adjoining the canal.—The building will be at once put under contract, and completed the coming season. This has long been need. Dayton is an important point, and passengers should have the proper accommodations and facilities afforded them there.

Railroad Speed.—A bill before the Massachusetts Legislature, to prevent injury and destruction of life upon railroads, has been ordered to a third reading by the Senate. The bill limits the speed of trains crossing drawbridges to four miles an hour—the Engineer being subject to a fine and imprisonment for offending against this provision. The President and Directors are also made liable for knowingly permitting a violation.

DeBow's Review: Industrial Resources, &c., for March. We have omitted to mention the receipt of this number of this valuable statistical Journal, containing articles upon Mobile River and Bay; The Regions of the Amazon; The Telegraph; The Russo-Turkish Question; Rise and Progress of American Commerce and Navigation; Insolvency amongst Merchants; Statistics of the United States; Newspapers and Public Libraries; Commerce of the Ohio and its obstructions, &c., &c.

Our Railroad Map.—We would call attention of those interested in the Railroads of the West, to our Map, containing *all* the roads completed, constructing and proposed, so far as can be heard from, being one of the most complete and *correct* maps ever published.—Third Edition.

Mail Service in Brazil.—There is a curious mail system in the Amazon, which gives evidence of the economy and civilization of the Brazilians. There is a Post Office at every town on the river, but there are no public conveyances for carrying the mails.—This defect is remedied by the government requiring the captains of vessels going up or down the Amazon, to report themselves at the offices, and receive and transport the mails safely to the next office, after giving a receipt for them.

Cattle for California.—Messrs. Mitchell & Co., of Alton, Ill., started two companies for California on Tuesday last, with a drove of six hundred cows. They cross the Mississippi at Jersey landing, and go thence by the Hannibal railroad to St. Joseph.

We take the above from the Cincinnati *Columbian*. Perhaps the people of Hannibal and St. Joseph will be glad to learn that their road is so far completed as to allow the transportation of those cows.

Roads and Railroads; A Manual of the Principles and Practice of Road-Making, comprising the location, construction and improvement of Roads, and Railroads; by W. M. Gillespie, A. M., C. E., Prof. of Civil Engineering in Union College; Eighth Edition, with additions. New York: A. S. Barnes & Co., Publishers.

We are often asked for some work upon the construction of roads and railroads, practical in its details, and fitted for the comprehension of any and everybody. This is just the work; it treats the whole subject lucidly and in detail, adducing the best authorities, and giving such information that all may clearly comprehend the subject; it is thus well calculated for the use of persons about to engage in railroad affairs, as contractors, directors, etc., and will enable them to form just ideas of the practicability, feasibility, or propriety of any given course for a road. We recommend it to such as are in want of this class of information.

Ohio and Mississippi Railroad—Opening Celebration.—On Tuesday, the 4th inst., the O. and M. Railroad was opened to Aurora, 28 miles from this city. The party was large, numbering at least 700, which was largely increased at Lawrenceburg. All along the road the utmost joy was manifested as the cars rolled by, giving the first positive evidence, that the great cities of the West were henceforth to be united in iron bands. Salutes of cannon, *feus-de-joies*, were fired, and handkerchiefs and hats waved from every house. The scene was exciting and inspiring. At the fine machine shop of the company, below Aurora, a large hall, 100 by 50 feet, was filled with tables, covered with the best of viands. The collation did honor to Mr. Coleman, of the Burnet House, and the guests of the company did honor to the collation. Toasts and speeches were delivered, which it is impossible for us now to report. Among the works and machinery of the company, we ought to notice, as entirely admirable, the fine broad cars, adopted to the broad gauge. The seats were broader and better arranged than any we have seen. The cars of this road are admirably adapted to the comfort of families. All the arrangements are made with such care, in regard to comfort that we are quite sure no railway of the country, will exceed it in safety and convenience. We must close speaking of details until another occasion. But we will add, that the thanks of the whole company are due to the officers of the company, for being returned in due season, without the the slightest accident or embarrassment of any sort.

Springfield, Mt. Vernon & Pittsburgh Railroad.—This is the road which is to connect the Ohio & Pennsylvania Railroad at Lakeville, with the Little Miami road at Springfield. The Road is now open for freight and travel from Springfield to Delaware, and consequently will commence to earn money for the company, as it passes through a rich and populous country. At Delaware it connects with the Cleveland and Columbus road. The line from Delaware to Mt. Vernon is in a great state of forwardnes, and that between Mt. Vernon and Lakeville is going forward as fast as the funds of the company will permit. it will doubtless be finished by the end of the year.

Pacific, Mo., Railroad Company.—The following gentlemen have been elected Directors of this company, viz: Thos. Allen, Hudson E. Bridge, James E. Yeatman, Luther M. Kennet, Henry L. Patterson, Edward Walsh, J. B. Brant, A. H. Glasby, John C. Rust, R. M. Renick, David P. Waldo, and George R. Smith.

There was no election of the thirteenth Director, no person having a majority of all the votes, as required by the charter.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

CORRECTED TO WEDNESDAY OF EACH WEEK.

COMPANY.	NATURE OF BOND.	INT.	DUE.	OFF'D.	ASK'D

MONETARY.

The demand for money at the East has become very active, and the tendency to improvement, noticed in our last, has been reversed. The news of so many failures in Europe, and the unsettled state of the war question, has a depressing effect, leaving the market in a very uncertain state. The Banks have been contracting their loans preparatory to making their April exhibits. In Boston, the sum of $1,088,000 was due on the first inst., in way of dividends.

The ruling rates for money are—call loans 7 per cent., No. one paper 9@10, and second class 10@12 per cent. Foreign Exchange rates for 108@108⅝.

Among the sales by A. H. Nicolay, March 30th, were :

$5,000 Bonds, Toledo, Norwalk and Cleveland R. R., 2d mort., 7s., 1863, coupons	$88 00
$5,000 Do. do. do. do. do.	87 00
$3,000 Parker Vein Steamship Co	81 75
11 Shares Hudson River Railroad	66 00
20 Shares New York and Erie R. R.	75 50
20 Shares Third Av. N. Y. R. R.	63 50

Sales at the Stock Exchange Board, New York, have been large, the quotations of which will be found in our tables, as far as the Stocks are therein contained.

We are indebted to Messrs. E. W. Clark & Co., of Philadelphia, for copies of reports of the Stock sales of the Philadelphia Board, which we also find of great service in making up our quotations, enabling us to give accurate data up to the day of going to press.

The city of Baltimore is in the market with $2,000,000 6 per cent. Bonds, to be awarded to the highest bidder on the 8th of April inst. This is part of the loan intended to complete the double track, &c., of the Baltimore and Ohio Railroad, to which the credit of the city is pledged.

At the West, we have to note an active demand for money, and number one paper is current in the streets at 1 per cent. per month; less known at 1½ per cent. Eastern Exchange is firm at our last quotations. The business market presents a very quiet appearance.

We are about to have a BOARD OF BROKERS in this city Preliminary meetings have been held, and committees appointed to perfect the organization, which will soon be completed.

Stocks continue dull, in consequence of the scarcity of money. We refer to the quotations of Messrs. Hewson & Holmes' sales, for prices.

In our last week's quotations, an error was made in the price of 82 shares Lawrenceburg and Upper Mississippi Stock, quoted at $82 50, should have been $72 50.

THE BANK CLEARING HOUSE.—To form some idea of the beauty and precision with which the daily bank settlements at the Clearing House are made, we will simply state that the whole of the exchanges, amounting frequently to over twenty millions of dollars are received, delivered and receipted for, in less than 5 minutes—the separate balances struck, reported, and the general balance declared in 45 minutes, from the time of commencement. It would be difficult in any profession to find fifty-two as intelligent and gentlemanly young men as those standing as settling clerks at at the fifty-two bank desks, upon whom devolves, under the directions of the efficient manager and his assistant, this enormous amount of labor. The banks may well be proud of the perfection and mathematical precision of the machinery which they have created.—*Jour. of Commerce.*

THE LOGANSPORT JOURNAL of April 1st says: A few weeks since the Railroad Record published a statement that the Wabash Valley and the Eel River Roads had been consolidated. We contradicted the report, and sent the Record a copy of the paper containing it. No correction has been made, and the article is still traveling around as true. The statement is unjust to both roads, particularly to the Eel river road, which is said to have suspended on account of the arrangement.—Will the Record correct?

Our answer to the above will be found on page 823, No. 52, Vol. 1 of the Record.

MATHEMATICAL INSTRUMENTS, &c.—We would refer such of our readers as may be in want of any thing in the way of mathematical or surveying instruments, to the card of Mr. Foster, in our advertising columns. He is an experienced workman, and can be depended upon to fill all orders promptly.

Mr. Foster is the authorized manufacturer of *Dr. Locke's Hand Level* for the West.

BRIDGE OVER THE WABASH.—The Terre Haute *Courier* says, "the Terre Haute and Alton Railroad bridge now stretches fully across the river, and the track is being laid upon it." The draw works admirably—only one man required to open it quickly for the passing boat.

Change of Time on Cincinnati, Hamilton, Eaton & Richmond Railroad.

ON and after TUESDAY. April 4th, 1854. the Morning Train for Richmond and Indianapolis, will leave Depot, foot of Sixth street, at 6 o'clock, A. M.

Passengers by this Train connect at Indianapolis with the 1 o'clock, P. M. Train on Lafayette and Indianapolis Railroad for Lafayette and Chicago; arriving at Chicago by 9 o'clock, P. M., of same day, being 9 hours less time than by any other railroad route leaving Cincinnati.

Also, connect at Indianapolis with 1.15 P. M. Train for Terre Haute.

Trains for St. Louis leave Chicago at 11 o'clock P. M., after the arrival of 1 P. M. Train from Indianapolis in the morning, making this the quickest route by far between Cincinnati and St. Louis.

Evening Train will leave as usual, at 3.30 P. M. connecting at Richmond with 7 P. M. Train for Indianapolis; arriving at Indianapolis at 10.30 P. M.

Chicago and Lafayette passengers, by this Train, sleep at Indianapolis, and resume at 6, A. M. next morning,

Drawing instruments of all kinds; brass and German silver Measuring tapes of all kinds, Magnets, Magnifyers, Barometers, Spy Glasses, &c., &c. Repairing promptly attended to. ap.6-6t.

Office Cincinnati, Hamilton and Dayton Railroad,
Cincinnati, April 4th, 1854.

THE Annual Meeting of the Stockholders of this company will be held at the Office of the Company, in Cincinnati, on Monday. the first proximo, at 9 o'clock, A. M. The annual election, for the choice of Directors to serve the ensuing year, will be held at the same place and on the same day, between the hours of 2 and 5 o'clock, P. M. FRANK. S. BOND,
ap. 6-tt. Secretary.

NOTICE TO CONTRACTORS.

LOUISVILLE AND SANDUSKY RAILROAD COMPANY—1st DIV.

SEALED PROPOSALS will be received at the office of the Company, in Piqua, Miami county, Ohio, from the 1st until the 18th day of April next, for the grubbing, grading, masonary, bridging and superstructure of the first division of the above named Road. extending from Huntsville to Piqua, and covering a distance of 30 miles.

The work will be divided into two or more sections, and bids may be made for one or the whole, and with or without the laying the permanent track and ballasting.

The line. plans, profiles, maps and specifications may be seen at any time after date at the above office, where all proper information will be given by the Chief Engineer.

From bidders, personally unknown to the Company, testimonials of their responsibility will be necessary.

The speedy, prompt and faithful execution of the work, being a paramount object of the Company, the right is reserved to accept such proposals as will secure that object, without default, and to reject all if none are satisfactory.

The line is of easy access, by Railroad, at each end, and passes over a country which for profitable work, for general healthfulness and for abundance and cheapness of supplies, cannot be surpassed in the Western States. By order of the Board.

E. COOKE, President.

mr. 30tf.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States.	75 "

A liberal discount where a number are taken.

OFFICE OF THE AGENCY OF THE

Indianapolis and Cincinnati Junction Railroad Company.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights, now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass, assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft.

Cross Cut Saws.—Hoe & Co.'s C. S., John Dickerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet. Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street.

MEMPHIS & OHIO RAILROAD.

SEALED proposals will be received at the office of the Memphis and Ohio Railroad Company, at Memphis, Tenn., until the 15th day of April next, for the grubbing, clearing, graduation and masonry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted security for the completion of the work, at the time, and in the manner specified, and contracts will be let in sections, or for the entire work, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, should none prove satisfactory; and it is desireable that all propositions should be submitted with the view of preparing the whole work for the iron as soon as possible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specificatious may be seen at the office of the company, after the 1st of April.

mar.16-1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.

OFFICE—No. 2 Pine street, cor. of Broadway,

NOTICE TO CONTRACTORS.

PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

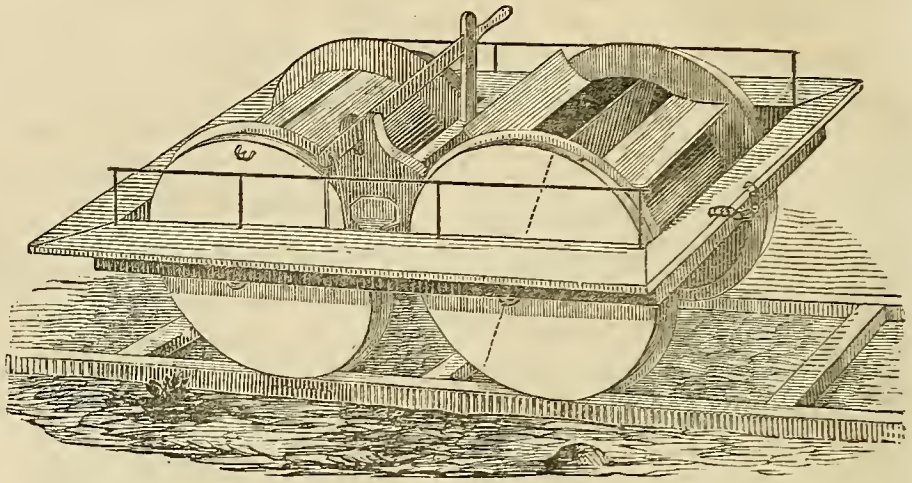
IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrensburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.

The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.



THOS. ALLEN, President.

THOS. S. O'SULLIVAN, Chief Engineer.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S

PATENT AXLE BOXES

FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted:—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st, 1853.

MR. JOHN LIGHTNER:

Sir:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable.

Very respectfully yours,
W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION, as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

WM. SHERBURNE,
PRINCIPAL AGENT,
dec1 Office, No. 167 Broadway, New York.

GUNPOWDER,

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.20 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.20 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyance of passengers to and from Piqua and Greenville over a good Macadamized road.

ST. JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH. JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2n, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

THE OHIO VALLEY, AND THE SOUTHERN ATLANTIC—CINCINNATI AND CHARLESTON, AND CHARLESTON RAILROAD.

The Kentucky Legislature, as we recently stated, has granted a liberal charter to what is called the Kentucky Union Railway Company, whose object is to make the last link, in the railway line, from Cincinnati to Charleston. The charter is a good one—the object a grand one—and the capital, we cannot doubt, will be found, when the plans are fully matured. The Union Railway will, in Kentucky, be from 140 to 160 miles in length. The Tennessee part, completing the line to Knoxville, can, we believe, be easily made.

The distance by the route adopted, will be as follows :

Cincinnati to Danville	132 miles.
Danville to Knoxville	130 "
Knoxville to Charleston, via Blue Ridge Railroad	370 "
Aggregate,	632 miles.

This route may be modified in several particulars; but, as there is a railroad nearly finished to Danville, (Ky.,) that route will probably be preferred. There may be, however, difficulties which will throw the balance in favor of another route. It is not perfectly certain that a good line can be found from Danville to Knoxville. The more direct route, undoubtedly, would be to leave the Covington Road at Paris, and proceed through Richmond, Kentucky. It is not, however, of routes we would speak, but of the immense advantages, both to the South and West, of such a work. We doubt whether any railway in America will ever be of such vast importance as one which shall connect the valley of the Ohio with the Southern Atlantic, on the most direct route. The productions of the different sections are totally different; the habits and usages of the people are different. The interior country, reached from either end, is full of the most valuable mineral resources, and thus all the exchanges would be beneficial, both in a commercial and moral aspect. It is now nearly twenty years since this subject engaged the profound attention of the people of Cincinnati, Charleston, and all the intermediate country. We have before us the pamphlets and letters, published and written at that time. They exhibit the proceedings of various public bodies, and the records of many distinguished men, now com-

memorated by history. Among them were Gen. Harrison and Dr. Drake, of this city, and General Hayne, and Colonel Blanding, of Charleston.

Time has only proved what was then said of the great importance of this work, and rendered its necessity to the country more apparent. We will recur, for a moment, to some additional facts, not then presented.

First, let us test the position of Charleston in regard to *radial* lines to the valleys of the Ohio and Mississippi. *Radii* drawn from Charleston to the following places, give the annexed distances:

Charleston to Cincinnati	510	miles.
" to Louisville	510	"
" to Cairo, mouth of the Ohio	600	"
" to Memphis	620	"
" to Vicksburg	640	"
" to New Orleans	650	"

Now, it is clear that to obtain the supplies of produce and manufactures, which the South requires from the West, there is no point Charleston can reach so readily, and advantageously, as Cincinnati. If she goes to Cairo, or Memphis, she has not only a longer line, but goes to a point far below the great grain-growing and manufacturing country. There is nothing at Memphis, except what she produces herself, and very little at Cairo. On the other hand, two-thirds of all the flour, provisions, grain, and manufactured articles, which reach New Orleans, come from the Ohio valley. So that it is to the Ohio valley, and that at the most favorable and central point for production, that the South must come to get her supplies, in the cheapest and readiest way.

Secondly, let us look into the position of Cincinnati, as regards the South. We have alluded to this point before; but it will elucidate this question to re-examine it:

Cincinnati to New Orleans	725	miles.
" to Mobile	640	"
" to Charleston	510	"
" to Norfolk	480	"
" to New York	560	"

The Atlantic coast is reached from Cincinnati in the shortest *radial* line at, or near, Georgetown, S. Carolina. As Norfolk is some miles from the coast, the distance to the coast at Charleston is about the same, in fact, with that to the coast at Norfolk. A railway there would probably be run in less time than to Norfolk.

It appears, then, that Charleston and Cincinnati occupy to each other positions, which are to the wants and connections of each other, *better than either would be to any other point*. They are, in fact, at the extremities of a transverse diameter, which diameter *must* be crossed, by those who would, in any way, connect the valley of the Ohio and the Southern Atlantic.

In this view, we do not lose sight of Pensacola, which we deem a highly advantageous point at which to connect Cincinnati with the Atlantic. But Pensacola is a Gulf port, and Charleston is an Atlantic one. Pensacola would connect us, on nearly a straight line, with Havanna; Charleston would give us the shortest outlet to the Atlantic.

The completion of this grand route, from Charleston to Cincinnati, is now entirely within reach. From Cincinnati to Danville is nearly completed. From Charleston to Columbia, South Carolina, is finished. The Blue Ridge Railroad, from Columbia to Knoxville, *via* the Rabun Gap, is secured, by the ample aid South Carolina and Tennessee have given the work. From Knoxville to the Kentucky State line, is secured by the State aid and County subscriptions. The link covered by the Kentucky Union Railway charter, is, therefore, the only one wanting. By its connection with other roads, and the immense *through* traffic which must inevitably take place, the stock of the road will undoubtedly be good, notwithstanding the sparseness of the country through which it passes.

There is no enterprise in which the merchants and capitalists of Cincinnati have a deeper interest, than in this, and we trust it will meet with the encouragement, which it so eminently deserves.

Railroads.

CLEVELAND, COLUMBUS AND CINCINNATI RAILROAD COMPANY,

THIRD ANNUAL REPORT.

For the following synopsis of the third annual report of this company, we are indebted to the Cleveland *Leader*, which says:

The President's report to the stockholders, announces first, a change in the termination of the fiscal year, from the 30th of November to the 31st of December. This will make the annual statement of the accounts more intelligible. In consequence of this change the present report covers the operations of the road for thirteen months—from November 30, '53, to December 31, '54.

During this period the C. C. & C. Road has been operated jointly with the Lake Shore or, Cleveland, Painesville and Ashtabula road, under one Superintendent, and a joint Executive Committee. The ratio of actual earnings has not been maintained, owing mainly to the break of gauge at Erie.

The earnings of '53, the last report ventured to put at a million—an excess over the previous year of $222,203 78. It has gone beyond. The actual earnings for the year ending Nov. 30th, '53, were 1,100,190 72.

544,117 miles have been run by the locomotives.

449,595 passengers have been carried without accident.

358,541,581 lbs. of freight have been transported on the road.

These general results show the arduous labors imposed upon the employees of the company, and the fidelity and success with which the duties of the Superintendent, and those under him have been performed.

The roads have now, mostly of the first class, 45 locomotives—nine new ones will be added in a few weeks. Ten more are contracted for—making in all, 64 locomotives for working 230 miles of road. The two companies also own:

First class passenger cars, 31; 19 second class, P. O. and baggage cars; 511 freight, stock and platform cars.

The *ballasting* of the road will be rapidly pressed. A large and valuable bank has been recently secured, three miles from Crestline, which will furnish an abundance of good material.

Fencing and cattle guards have been put at all the road-crossings, and the roadway enclosed with a solid fence, with the exception of five miles of the main line, and a portion of the Delaware curve.

A second track will be laid down, and at least fifty miles of it finished and ready for use, in the course of the year. From Cleveland to Grafton it will be put down as fast as the ballasting and cross ties are prepared for it.

The President states one fact which will arrest the attention of the public—*the Company is substantially out of debt*. He says:

"Its original bonded debt amounted to $1,652,000. The undertaking was itself a pioneer enterprise. Its bonds were presented in New York when the credit of Western railroads was unknown. Stock subscriptions at home were feeble and distrusted, Cleveland and Columbus, cities then at the lowest stage of depression, came into the work with hesitation and reluctance. Yet under all these accumulated embarrassments, the work was *commenced and carried through!*"

The President thereupon suggests the following views:

1st. The real income of the road should ensure a certain and reliable dividend of ten per cent. per annum.

2d. The net earnings, after that, should be charged in the first place with keeping the road in perfect order.

3d. Rendering aid to roads proposing to connect.

The reasons for these steps are briefly but forcibly urged by President Payne, in behalf of the Board, and will doubtless be held conclusive, especially when the road is exclusively the property of the stockholders, and when its policy can be fixed without infringing the rights of creditors, or encroaching on the rights of the State.

The Superintendent's report is excellent for its clearness in all its statements, and ere another year passes, the public will admit, unless we mistake, that L. Tilton has few equals, and that no *model* road will rank with the Cleveland, Columbus and Cincinnati.

MEMPHIS AND CHARLESTON RAILROAD EARNINGS.—From the Memphis *Whig* of 23d ult., we take the following, from the report of this company for the year ending March 1, 1854:

For four months of the year only thirty-nine miles were in operation; for the next two months the cars ran fifty miles from Memphis, and for the remaining six months sixty-three miles. On this extent of operations the earnings of the year were $139,231 59; expenses $58,850 11—leaving $80,381 48 profits, or 10½ per cent. on the cost of the sixty-three miles completed as above mentioned. A first-rate business, and very encouraging to all engaged in similar enterprises.

SPRINGFIELD, MT. VERNON AND PITTSBURG RAILROAD.

We have before us a copy of the "Second Annual Report" of this company. From which we gather the following items:

Length	112 miles.
Completed	50 "
Capital Stock of the Company	$2,000,000
Subscriptions	1,504,450
Convertible Bonds issued	500,000
do. do. authorized, but not yet issued	700,000

The Eastern terminus is Lakeville, on the Ohio and Pennsylvania Road, 6 miles east of Loudonville; western terminus at Springfield; completed from Springfield to Delaware on the 29th ult., and laid with heavy T rail. Between Delaware and Lakeville, the line is under contract, upon terms highly favorable to the company.

Contracts have been made with the Little Miami and the Ohio and Pennsylvania roads, by which the former subscribes $200,000, and the latter $100,000, to the stock of this company. The latter subscription will probably be doubled. There is every indication that this road will be rapidly completed, and being an important connecting link, it cannot but be a paying stock. By agreement this road is run by the little Miami Railroad Company.

THE BALTIMORE AND OHIO RAILROAD.—We have obtained the following very interesting and official statement of the *present* condition of the funded debt of this road, by a review of which the experienced reader will be able to arrive at a pretty accurate estimate of the general financial prospects of the company, for the residue of the fiscal year.

The funded debt of the Baltimore and Ohio Railroad Company, as appears by its report made to 30th of September, 1853, as follows, viz:

Loan No. 1, January, 1854		$1,000,000 00
Less sinking fund, applicable to its reduction	287,531 28	
		$712,468 72
Loan No. 2, of 1867		1,000,000 00
do. No. 3, (iron bonds		566,666 67
do. No. 4, of 1875		1,128,500 00
do. No. 5, of 1880		700,000 00
do. No. 6, of 1885 (for $2,500,000) now issued		1,281,846 25
		$5,389,481 64
Add preferred stock of the State of Md		3,0 0.000 00
Making the whole funded debt of the Co., at that time		$8,389,481 64
Residue of bonds of 1885, since issued		1,218,153 75
Making the whole funded debt to the present time		$9,607,635 39
Capital stock		$10,118,902 00

Treasurer's Office, Baltimore and Ohio Railroad Co., March 31st, 1854. J. I. ATKINSON, Treasurer.

From the above it will be seen that the entire funded debt, upon which interest accrues, is $9,607,635 39. Since the annual report of the president was made, it will be seen that $1,218,153 75, being the residue of the loan of 1885, has been realized. This amount, with the net earnings of the road for the past six months, together with $245,000 to the credit of revenue from the last year, making some 2,200,000 in all, has been applied to the reduction of the floating debt, and to construction, which is constantly progressing. This is a highly favorable exhibit of the state of the road, and affords the assurance that, with no unforseen contingency to affect the reasonable anticipations for the future, the company will be in a condition at the close of the fiscal year, to dispose of a very considerable amount, as policy may dictate.—*Baltimore Sun.*

PACIFIC, MO., RAILROAD.—From an exhibit of the affairs of this company, for the year ending 27th ult., we gather the following items:

Amount of Capital Stock subscribed to date	$2,382,650
Amount of subscription unpaid	1,179,682
Amount of State Bonds received	1,350,000
Due from "Kansas" Line	1,650,000
Due from "So. West. Branch"	1,000 000
Amount expended to 10th inst., in construction and real estate	$2,644,437
Total amount expended	2,780,699
Floating debt of Company	111,140
Funded debt	90,000

The first division, 38 miles, was opened July 19, 1853. The remainder is under way, and the whole will be completed within the year.

Station houses havee ben erected at St. Louis, and several other places. A machine shop and car factory has been put up at St. Louis.

The company has five locomotives, and six more contracted for, two stationary pumping engines; ten first class passenger cars; two second class and mail; thirteen covered freight; one magazine; thirty-four platform, etc., in all 107 cars.

Of the "South-Western Branch," we gave some items in our last issue. This road is progressing rapidly and ere long will be returning handsome dividends.

DAYTON & CINCINNATI SHORT LINE RAILROAD.

The "Second Annual Report" of this company is before us, from which we gather the following items:

The receipts in cash have been,	$228,967 64	
Disbursements "	216,676 56	
Balance, March 16, '54		$12.291 08

The original contract was with Messrs. Ferrel & Dunham, for the entire work. In October, 1853, these gentlemen abandonded the work beyond the tunnel, which was relet to Daniel Beckel, Esq., of Dayton. The company has yet issued no bonds, except $28-000 to contractors. Amount of loans remaining unpaid is but $30,000, due in July next, and secured by mortgage on the real estate of the company.

From the able and extended report of the engineer, Mr. Gest, we gather the following *elements*, viz:

Length of road		53 266 miles.
Straight line	39.882	
Curved "	13 384	53.266 "
Total curvature		1236°31' "
Minimum curvature		16371 feet.
Maximum "		1910 "
Level grade		15.940 miles
Ascending grade		21 757 "
Descending "		75.569 "
Total ascent going north		556.50 feet.
" descent " "		381 50 "
Elevation of Dayton above Cin'ti		175.00 "

The Cincinnati terminus of the road will be at the head of Broadway, where extensive "depot grounds" have been secured. From this point the road will extend to the tunnel upon a grade from 10 to 75 feet above the "old Deer Creek road," and below the level of Broadway, thus preventing the crossing of any street or alley within the city.

North of the tunnel the road passes along the slope of the hills, on a slightly descending grade; this section will be of expensive construction in consequence of a succession of spurs and ravines, requiring fills, in some instances as high as 60 feet; this continues to Chester Summit, except that the grade is ascending from Sharon. From Chester Summit the work averages only a moderate cost to within four miles of Dayton, where the grade is level, and the work, for the most part, light.

Throughout the line the unusual feature of absence of bridges is presented, there being no structure requiring a span of more than forty feet; thus no fears of freshets, or loss of bridges by fires need be had.

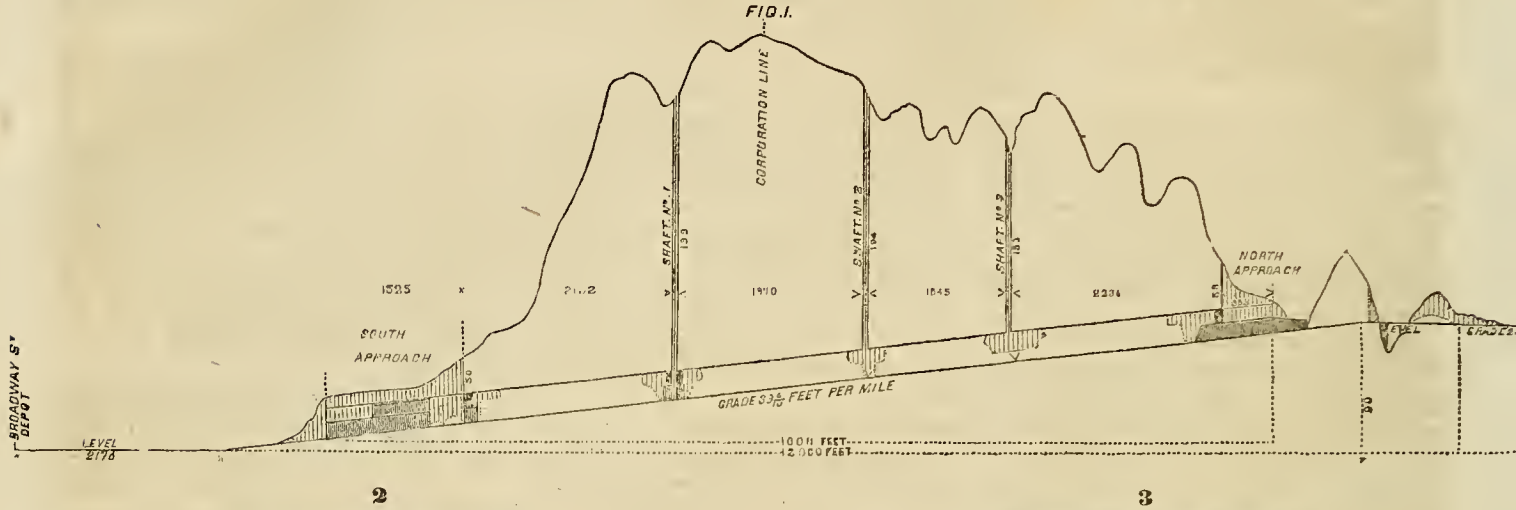
The depot grounds in Cincinnati front 2750 feet on Hunt st., at an average depth of 210 feet on Broadway, embracing an area of about 15 acres.

At Dayton the grounds embrace about 7½ acres south of the old canal, abutting on Third street. This has the advantage also of being exempt from all street or alley crossings.

The estimates are as follows for the road completed:

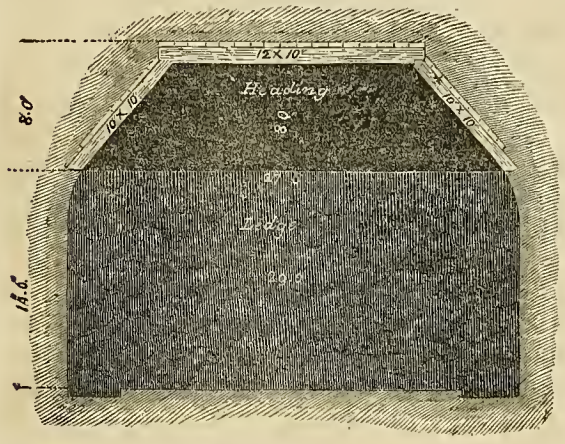
Engineering and Incidentals		$35 000
Depot grounds, Cincinnati		210 000
" " Dayton		15 000
" " Eleven intermediate Stations		12 600
Right of way		108 000
Fencing		29 780
Road Bed		30 000
TUNNEL AND APPROACHES.		
South Approach	77 909	
North "	30 230	
Shafts, (cost)	24 250	
Body, "	643 600	
		$775,989
Earth work, masonry, timber, and bridging from tunnel to Dayton		669,127
Total, ready for iron		$1,885,996

Including four miles of double track road-bed, and side-track grading for 12 places. The estimates for iron, rolling stock, depot buildings, etc., are not given.



The report goes on to show the necessity for the construction of the road; its connections, revenue, demonstrated by unmistakable figures, business prospects, etc., with a map showing the country tributary to this line.

This road, as well as those availing themselves of this tuunel as an entrance into this city, will have a decided advantage over all others, inasmuch as the depot will be almost in the very heart of the city, thus enabling travelers to dispense with omnibusses on arriving and departing.



We come now to the TUNNEL on this road, which, as will be seen by what follows, is being rapidly completed; and when thus completed, and opening, as it will, an ingress and egress to and from this city for railroads, will stand a monument of the genius and nerve of the Engineer who *dared* to advise its construction, and still further dared to undertake the management of it. It has been called "Gest's Tunnel," and so it will continue to be called.

The better to illustrate the magnitude of the undertaking, we have procured cuts of the work, showing it in different sections, numbered 1, 2 and 3.

We copy from the report as follows:

2

3

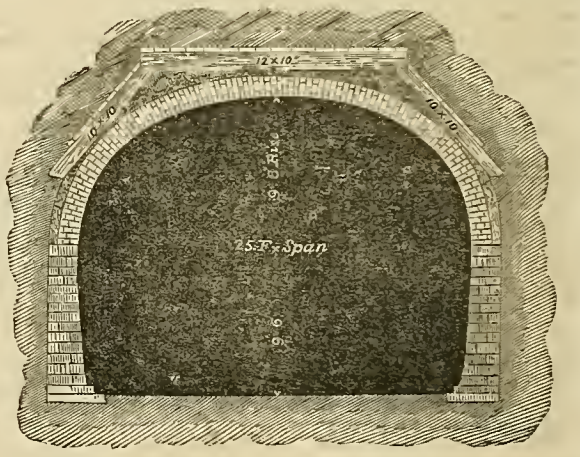


Fig. 1, represents the profile of the hill immediately over the axial line of the Tunnel, with the position of the Tunnel, Shafts and Approaches.

The axial line of the Tunnel is straight, and lies in a north-easterly and south-westerly direction, with an inclination, rising from the city, at the rate of thirty-nine and six-tenths feet per mile. The position of the Tunnel is near the base of the hill, where the marl largely predominates, and in its hight only three layers of stone occur; one about six inches thick, one eight, and the other ten inches, separated from each other by layers of marl from six to eight feet thick. As these strata lie nearly horizontal, they are necessarily cut at the angle formed by the ascending grade of the Tunnel.

There are three shafts, which are respectively 199, 194 and 153 feet in depth to the floor of the Tunnel. They are elliptical in form, with a transverse axis of 20 feet, and conjugate of 12 feet; the transverse axis lying immediately over, and in line with, the center line of the Tunnel. The first shaft is 2152 feet north of the south approach; the second is 1970 feet from the first; and the third is 1545 feet from the second, or 2236 feet south of the north approach. The south approach is 1525 feet in length, and varies in depth from one foot at commencement, to fifty feet at breast. The north approach is 583 feet in length, and varies in depth from fifteen feet at commencement, to fifty-five at breast. Both approaches will have to be walled and arched with stone for their entire length. The distance between these approaches, which is 7903 feet, comprises the Tunnel proper; this, also, must be walled with stone side walls, with a brick arch resting thereon.

The marl and stone to be excavated is easily drilled, and yields readily in blasting. It is also sufficiently compact to be self-sustaining while being mined, without the use of temporary shields, but requires propping and planking to stand for many days without being arched.

Fig. 2, represents the cross-section of the Tunnel as excavated and timbered, preparatory to being arched. Fig. 3, represents the cross-section when arched and packed, and ready for the trains.

There are eight points for operating; one at each end, and two at each shaft. The breast, at each point of operation, is divided into two parts, and worked by two different gangs of men. The crown part or "Heading" (see Fig. 2) being about eight feet in hight, with a width of sixteen feet at top, and twenty-nine feet on floor, is first excavated and followed up with the timbering, at proper intervals. When advanced a reasonable distance —say over seventy feet—the work of excavating to the floor, or "ledge" excavation commences, and so continues to follow up the "heading" keeping, however, about the same distance behind it all the time. The side-walls and arch can be advanced as rapidly as the excavation, but may, as a general rule, be about one hundred feet behind the "ledge." The material when excavated, is removed in cars drawn by horses, to the ends, or immediately under the shafts, where it is at once raised to the surface.

Shaft No. 2, was commenced Dec. 16th, 1852; No. 1, and the north approach, Dec. 20th, of the same year; No. 3, Feb. 15th, 1853, and the south approach, April 10th, of the same year. All the shafts were excavated to the crown of the Tunnel, between the 5th and 30th of June last.

The excavation and side-walls of North Approach, are entirely finished—the arching only remaining to be done. Nearly all the excavation, and three-fourths of the masonry in side-walls and arch of South Approach, have been completed, and five hundred feet

of it entirely finished—being arched and covered with earth.

Of the aggregate length of the Tunnel and arched Approaches, there are at this time, 2800 lineal feet excavated, and ready for the rails, of which 750 lineal feet are entirely completed, being arched, etc. In value, *the work actually done is equal to two-sevenths of the entire amount when completed.*

The side-walls are nine and a half feet in hight above the floor of the Tunnel; two and a half feet thick on the top of the projecting foundation courses; and two feet at spring line of arch. They are being built of the limestone, taken out of the hill, laid in courses; the front stone having dressed beds, with rubble backing. The arch is of brick, seventeen inches, or two bricks thick, laid in cement, excepting immediately at the lower end, where, as the roof is there much shaken, it is strengthened by the addition of rings from eighteen inches to two feet wide, by a brick to a brick and a half thick on the outer side.

At the two ends, and the three shafts, steam engines, of about fifteen horse power, are used to raise the excavated material to the surface. At the shafts, and north end, the material is raised vertically; at the south end it is drawn up on an inclined plane. There is also a small auxiliary engine at each point, used for driving a fan for ventilating purposes—the fresh air, by means of canvass tubes, being conducted from the surface to the several breasts where the workmen are engaged.

But little water has yet been found, not sufficient, except at one point only, to require removal, and there merely an ordinary hand pump is required. Nor is there any noxious vapor, excepting such as is made by the workmens' lamps, and explosions of powder.

The excavations, thus far, are through a uniform material, and there can be no doubt whatever that it will continue the same.—They have also confirmed my pre-conceived opinion that it is the safest and cheapest tunneling material known, at the same time demonstrating that the undertaking was entirely practicable, and could be carried forward more rapidly than formerly estimated by me.

To advance the work most effectively, requires forty men at each breast, consisting of one heading and ledge, for each eleven hours, with eighty men tending cars, engines, etc., or a force of eight hundred men directly engaged in the excavating department, per twenty-four hours, in addition to the necessary carpenters, masons, tenders, quarrymen, and other workmen and horses, with which force the whole work would advance at the rate of at least six hundred and forty feet per month, and be executed at a minimum cost. Any less force is attended with proportionately increased cost, as many of the charges are common to a force of half the number stated, if not to a less one also.

The tunnel, from its commencement, has been in charge of Mr. S. W. Hartwell, constructing Engineer and principal Assistant.

Signal Lanterns.—The Philadelphia, Wilmington and Baltimore Railroad Company, it is stated, are having a reflecting light placed upon the draw of the bridge which crosses the Brady wine creek, to give notice to the trains when the draw is off. There are two sides of the lamp, so made that the light shows up and down the road when the draw is on, and when off no light is seen on the road, but it shows up and down the creek.

WHAT THE RAILROADS DO.

The following from the Pittsburgh *Post* we commend to our readers, as suggestive of what railroads do for the country in the single item of *iron*. When we add to this the immense amount of other business, owing its growth and increase to the same source, who can say we are building too many railroads? The *Post* says:

Much has been written about the benefits of railroads, but every day's experience and reflection developes more fully their benefits, and discovers some new effect of their agency upon human affairs. Steam and the rail are revolutionizing the world. Their material and moral effects are equally vast and interesting.

But a few years ago the iron manufacturers of this country were clamorous for high tariffs to protect them against foreign competition. And some protection seemed necessary to the prosperity of our iron manufactures. But now, when there is a prospect of some reduction of the tariff, we hear little said about it. The iron men see before them the prospect of unbounded prosperity, and a demand so vast for their fabrics that no foreign competition need be feared. To steam and the railroads is this change mainly to be attributed.

There are 13,000 miles of railroad in operation in this country, and by January, 1855, there will be 15,000 miles. 100 tons of rail per mile, would make the amount now in use one million three hundred thousand tons, which, at $65 dollars per ton, amounts to $84,-500,000. The wear and tear requires a renewal of eight millions dollars' worth annually. But it is estimated that by January, 1860, there will be 30,000 miles of railroad in operation; 17,000 miles more than at present. At 100 tons per mile for this, 1,700,000 tons of rail will be required; which, at $65 per ton, will amount to $150,000,000. Add to this the eight millions per year for renewals and repairs of roads now in use, for the next six years, and it makes the enormous aggregate of $158,000,000 of the single item of iron rails for the railroads, between this date and the first of January, 1860. Add to this the vast sums to be paid for locomotives, and all the running gear of these railroads, and the amount can scarce be less than 180,000,-000 to be paid by railroad companies for iron manufactures within the next six years. Then all the other uses of iron are rapidly and vastly increasing, in building ocean steamers, and all the innumerable fabrics of iron. Steam and the rail are the great agents of material progress; and, under their operation, the iron interests of this country is not only safe, but has opened before it a boundless source of profit and wealth.

But the agricultural interest of the whole country is equally benefitted by the railroad. We can recollect the time when corn sold in Ohio for twelve and a half cents per bushel, while at the same time it was worth seven times that in Boston. It cost nearly all it was worth to carry it to the markets from Ohio. Now, the farmer in *Iowa* can send his wheat and corn all the way to New York and Boston by railroads, and get the full Eastern price for it, excepting the low cost of a speedy transit by the rails. All over the broad land the railroads are stretching in every direction, and the price of farm lands is rapidly rising, and the products of those lands have immediate access to all the best markets of the world.

The railroads also develope the mineral wealth of the country. Many a coal bed and iron mine has lain valueless for centuries, until some railroad has brought them within reach of the markets.

Then the vast amount of employment at good wages, given to the laborers, mechanics and artisans, in the construction of these roads, is another large item of their benefits. Thousands and tens of thousands of families subsist and thrive on the wages paid by railroad companies to laborers and mechanics.—The whole business of the country, and its wealth, too, are doubled by steam and the rail.

Steam and the rail make neighbors of the most distant communities. Washington City will be as accessible from California in ten years, as from Ohio twenty years ago. And from San Francisco to London or Paris, the journey may yet be made in fifteen days; and a Pittsburgher may travel to Constantinople in twelve days. With such facilities for traveling, men will and do "go to and fro in the earth, and knowledge increases." And as knowledge increases, the prejudices of nations give way; the human race becomes more assimilated and friendly, and knowledge more universally diffused.

Steam and the rail are revolutionizing the world.

New York Pacific Railroad Company and Texas.—The New York Pacific Railroad Company have determined to bid for the road through Texas under the late law. They will deposit the $300,000 required as a forfeit.—They will give a bonus to the State of $2,000,-000 of paid stock, one-half of which is to be a permanent fund to establish a "Pease University;" $400,000 of which to establish a Lunatic Asylum, and the remaining $600,000 for educational purposes generally. This information may be depended on as correct.

There are now forty-three railroads chartered in this state, embracing some twelve or thirteen thousand miles of railroads, on paper.

The report of the committee of the Legislature in relation to lands in Texas, donated to educational purposes, embraces the following number of acres:

To private institutions, called Universities	106,272
To establish two State Universities.....	221,400
To Common Schools and Academies...	1,700,352
Making the sum total of acres.....	2,028,024

—*Arkansas Traveler.*

Columbus, Piqua & Indiana Railroad.—The contract for finishing the work on the Columbus, Piqua, and Indiana Railroad has been let, we understand, to a company composed of Mr. Coyner (an experienced contractor from Indiana,) S. G. Brecount, Esq., of Champaign county, and Mr. J. Sowers, of this county. There may be others in the firm, but if so we have not heard it, as we have not conversed with any member of the Board since their return from the meeting at Columbus on Wednesday.

From what we know of the two last named gentlemen, and what we hear of the first named, we are satisfied they will not disappoint the expectations of the Board in regard to their contract. Messrs. Brecount and Sowers have both had contracts on the line already, and completed them to the entire satisfaction of the Board; and Mr. Coyner has had, and completed them, some heavy contracts on roads in Indiana.—*Piqua Register.*

ST. LOUIS AND NEW ORLEANS CONNECTED.

The following "memorial" is worthy the attention of the public:

RAILROAD MEMORIAL.

HERNANDO, Miss., March 18, 1854.

At a meeting of the Board of Directors of the Mississippi and Tennessee Railroad Company, held at Hernando, Miss., this day, the following memorial was unanimously adopted, and the Secretary of the Company directed to transmit a copy of the same to the President and Directors of the Iron Mountain Railroad Company, St. Louis, Missouri:

To the President and Directors of the Iron Mountain Railroad Company:

GENTLEMEN: We deem it a privilege derived from the community of interests existing between the great works in which we are respectively engaged, to solicit your earnest attention to what we believe to be the natural, legitimate, and, all things considered, the most judicious and profitable southern terminus and connection of the extension of your road.

This point you will at once understand to be Memphis. New Orleans is the grand emporium of trade for the valley of the Mississippi, and to reach this mart by the shortest and most speedy route is the first law of commerce. That route of eourse a "right line," and a glance at the map will show Memphis to be a point immediately in that line from St. Louis to New Orleans.

The distance from St. Louis to New Orleans, on an "air-line," is 486 miles; and on the most practicable railroad line via Memphis, Hernando, Panola, Grenada, Canton and Jackson, Miss., it is less than 530 miles; whereas, by the Mississippi river it is 1246 miles, making a difference of 716 miles in favor of the railroad, and a difference of seven to nine days in the time of transit.

Every day is demonstrating the utter incapacity of our Western rivers to meet the demands of commerce. The numerous steamboat disasters, and consequent destruction of life and property—the long and tedious voyage from St. Louis to New Orleans—the snags and sand-bars in summer—the ice of winter, all call aloud for a safer and speedier mode of eommunication, and urgently demand an extension of your road to its connection with those at Memphis. Make that extension and achieve Lieut. Maury's stupendous scheme of bridging the Mississippi river, and then will be presented a magnificent and unbroken line of railway from St. Louis to New Orleans.

The greater portion of this is already provided for. From New Orleans to the Mississippi state line, the Great Northern and Jackson road is nearly completed, and will soon be at work all the way to Canton, Miss. Thence the Mississippi Central road to Holly Springs, passing Grenada, Miss., is under contract to be completed in two and a half years, and now in processs of construction. From Grenada, our road (the Mississippi and Tennessee Railroad) completes the line to Memphis; and the available means at our command warrant us in the confident expectation of its early consummation.

Provide now for the intervening link from Memphis to the Iron Mountain, a distance of about 140 miles, and the work is done,

Draining, as it would, the very heart of the great valley of the Mississippi, usurping the province of that great national artery, in exchanging the products of its varied and fertile regions, or in gratifying the locomotive propensities of its people, this line of road becomes of more commercial importance than any now built or projected, the Pacific road alone excepted.

We are aware that an effort has been made to divert the road from its legitimate direction, and to make Helena, in Arkansas, its terminus. This certainly evinces a very laudible desire to promote *their own* interest in this matter, but we respectfully submit that such is not the interest of your road. A connection by that route with the line of road from Memphis to New Orleans could not be made north of Grenada, nor in a less distance than 300 miles, whereas the connection can be made at Memphis on an "air-line," in 205 miles; and it is believed on much more favor able ground, as on the latter route you avoid the immensely high overflow encountered in traversing the bottom lands of the St. Francis, the Mississippi and Tallahatchie rivers.

We believe that when the two routes shall have been subjected to the test of instrumental examination, the superior advantages of the Memphis connection must become manifest to every unprejudiced mind, and that in the location of a road so national in its character, no local or personal interest can be permitted to influence it.

Trusting that this question will receive at your hands the attention which its importance demands, we respectfully subscribe ourselves your co-laborers, in a great work of public improvement.

F. M. WHITE,
Pres't.

TENNESSEE, "STATE AID," RAILROAD BONDS.—The Nashville *American* makes the following remarks relative the annexed article from the New York *Herald*, which is always finding "mare's nests:" The *Herald* says:

"A resolution of the Tennessee Legislature, instructing the Attorney General of that state to bring suit against the Georgia and East Tennessee Railroad Company, for the State bonds supposed to have been wrongfully issued to it by Gov. Johnson, was amended by adding similar instructions as to the bonds to East Tennessee and Virginia, and all other railroad companies, and finally, the whole matter was laid on the table.

Whereupon the *American* remarks:

"The propriety of the issuance of the bonds in question to the East Tennessee and Georgia road has heretofore been discussed at length in this paper. We have regarded the course of Mr. Bailey, in introducing the resolution referred to, as a political manœuvre, and its fate in a Whig House of Representatives showed that it was so regarded in that body.—There has never been a question raised as to the propriety of the issuance of State bonds to "the East Tennessee and Virginia and all other railroad companies," and the insertion of those companies in the resolution of Mr. Bailey was intended and had the effect to show that the House regarded the East Tennessee and Georgia railroad bonds to have been as properly issued as those to any road. When this had been done, the subject was laid on the table and there slept.

"The whole matter, we repeat, can be regarded, and is regarded here, only as a political manœuvre, designed to reach the Governor and Attorney General. It most signally failed in the Legislature of its object, and it cannot in the least degree affect the character of any State bonds, when the history of the matter is known.

SILVER PITCHER PRESENTATION.—Some two weeks since at Browning's Hotel, in Madison the operatives of the Madison & Indianapolis railroad, presented to Mr. John R. Cravens, formerly Vice President of this road, a beautiful and exquisitely wrought Silver Pitcher. The orator on the occasion was Mr. D. C. Braham, of N. Madison, through whom the pitcher was presented. Mr. Cravens responded in his usual happy style. The pitcher is a magnificent piece of workmanship, and cost $125. It bears the following inscription:

FROM THE OPERATIVES
OF THE
MADISON & INDIANAPOLIS RAILROAD,
TO
John R. Cravens, Vice President,
AS A MEMORIAL OF THEIR RESPECT AND ESTEEM FOR THE MAN AND OFFICER.

LOGANSPORT AND NORTHERN INDIANA RAILROAD COMPANY.—The following gentlemen were recently elected Directors of this company:

Wesley Park, and Reuben J. Dawson. of Dekalb county; Adams Y. Hooper, and Wm, H. Swasey, of Whitley; Wm. Thorn, and Abraham Shallenbarger, of Wabash; John H. Constant, of Miami; James W. Dunn. W. S. Brown, S. B. Kendrick and Philip Pollard, of Cass; Hamilton B. Bradshaw, of Brooklyn, N. Y.; and Henry E. Barret, of Troy, N. Y.

Phillip Pollard, Esq., was elected President, and Charles C. Clark, Secretary and Treasurer. L. S. Nash, Esq., was appointed Engineer-in-Chief.

The whole of this line, except 7 miles, is cleared and grubbed, and 20 miles are nearly graded. Means for the completion of the road, ready for the iron, have been provided. The work is going on quietly, but surely towards completion.

LUMBER BUSINESS.—A correspondent of the Detroit *Advertiser*, writing from Port Huron, says, at present the pine lumber trade is the great and absorbing business of that and the surrounding country. By careful estimate, the lumber manufactured in St. Clair and Sanilac counties amounted last year to

92,900,000 feet.

Logs furnished by these counties and sawed by mills on Detroit river—say	33,000,000
New mills erected during the past winter equal to	6,000,000
Add 10 ₱ cent. for increased machinery and improvements and general advance in value	13.190,000
Total quantity of lumber and logs for 1854	145,090,000 fe't
Worth at a low estimate $10 ₱ M., amounting to	$1,450,000

BURLINGTON AND MISSOURI RAILROAD.—J. W. Brooks, of Detroit, Mich., has been elected President of this company, and Oliver Cook, of Burlington, Iowa, Secretary.

CALIFORNIA AND OREGON, NEW EMIGRANT ROUTE, VIA MINNESOTA.

We are in receipt of copy of a speech of the Hon. Wm. H. Nobles, of Minnesota, relative to a new and much shorter route to Oregon and California than any heretofore followed; and inasmuch as it will be some time yet before we shall have a railroad to the Pacific, over which emigrants to that region can pass, we here make a few extracts from the speech and accompanying documents, relative to this route :

St. Paul, the northern bend of the Sweet Water River, in the South Pass, and San Francisco, are in a direct line, as will be seen by reference to a map. The distance of this route is as follows :

St. Paul to Fort Ridgley, about.....	100	miles.
Thence to the Missouri at Old Fort Aux Cedre.....	200	"
Thence to South Pass.....	500	"
Total.....	800	"

Of which 100 can be made in steamboats. By the old routes the distances are as follows:

Council Bluff to South Pass.....	953	miles.
Month of Platte to " "	975	"
Old Ft. Kearnary " " 1000		"
St. Josephs " " 1100		"
Ft. Leavenworth " " 1100		"
Independence " " 1250		"
All land travel		
From Chicago to South Pass, via Council Bluffs, is.....2350		"
From Chicago via St. Paul, Min.....1284		"
Difference in favor of St. Paul.....1066		"
Actual difference of land travel..... 200		"

Thus much for that portion of the route east of South Pass. West of South Pass the line does not exceed an air line more than 10 miles to San Francisco. The route is via Soda Springs, Head of Humboldt River, Honey Lake, and Nobles' Pass through the Sierra Nevada, and thence to Oregon or California.

This route avoids the heavy travel of the old routes; the mountains are easy of access; water of the best quality is abundant, being at no point more than 25 miles apart; timber and pasturage are abundant; no delay at rivers, or extortion in the way of ferriage, will be experienced on this route, as there are no rivers which are not fordable.

Such is the substance of Mr. Nobles' speech, and the truth of his assertions is vouched for by a company of ten gentlemen appointed a committee by the citizens of Shasta, Cal., to accompany Mr. Nobles over the portion west of the South Pass, and examine the merits of the route. Of the fitness of this route for railroad purposes Mr. Nobles is perfectly convinced; he is now at, or on his way to Washington, to present the matter to the notice of Congress.

The Legislature of Minnesota has taken hold of the matter, and published the speech in pamphlet form for gratuitous distribution.

Vicksburgh, Shreveport and Texas Railroad.—The directors of the Vicksburg, Shreveport and Texas railroad have commenced active operations and advertise for proposals to clear and grade three important sections of the road. These sections are first from a point opposite Vicksburg to Richmond, in Madison parish; second, from the Ouachita river, twenty miles west; and third, from Shreveport to the Texas line, in the direction of Marshall and El Paso.

Illinois Central Railroad.—From the recent report of this company we gather the following elements of construction, viz:

Division.	Miles.	Gradg. Incomp'te.	Gradg. Comp'te.	Tr'k Laid.
1	60	2.90	57.10	31
2	52	4.70	47.30	21
3	43	16	27	—
4	49	9	40	—
5	44	2.89	41.11	23
6	60	4	56	56
7	79	20	59	14
8	67	13	54	25
9	56	—	—	56
10	72	4	68	44
11	48	3	45	—
12	74	23	51	—
	704	102.49	601.51	270

ALIGNMENT.

Division.	Tangent.	Curve.
1	38.11 miles.	22.68 miles.
2	50.94 "	1.06 "

12	68.68 "	5.32 "
	629.40 "	74.60 "

Hannibal and St. Joseph Railroad.—In our last issue we stated that the contractors upon this road, Messrs. Duff & Learned, had disposed of a portion of their contract to Messrs. Gould & Watson. Our information was derived from the Hannibal *Messenger*.—A more recent issue of that journal says that no such transfer of any portion of the contract has been made. Messrs. Duff & Learned merely transferred a portion of their stock to the amount of about $1,000,000.—These contractors are urging the work forward, at both termini of the line.

Urbana, Findlay and Dayton Railroad.—We are glad to learn that the amount of stock necessary to a permanent organization of the Urbana, Findlay and Dayton Railroad has been promptly subscribed, and that next week notice will be given for the election of officers, &c. That this road will be made, appears to admit of no doubt.—*Hancock Courier.*

North Missouri Railroad Extension.—An enthusiastic convention in favor of extending the North Missouri Railroad on through Iowa to the Des Moines River at Ottumwa, was held at Ottumwa on the 15th. Two counties, Wapello and Davis, are pledged for $300,000 of stock. The greatest enthusiasm prevailed, and the "extension" is regarded as a "fixed fact."

North Missouri & Iowa Extension Railroad.—This company was organized on the 15th ult., at Ottumwa, Iowa, by the election of the following gentlemen as a Board of Directors, viz: George Gillaspy, C. C. Warden, Joseph Hayne, J. W. Heydrick, E. Washburn, J. W. Ellis, H. W. Briggs, H. H. Trimble, and Joseph J. Earheart.

The object of the company is to construct a road from the termination of the North Missouri road, at the north line of Schuyler county in Missouri, to Ottumwa, Wapello county, Iowa, via Bloomfield, in Davis county. The office of the company will be located at Bloomington.

The attendance was large and the addresses spirited. The citizens of that portion of the State are anxious for the construction of this line, and are ready to lend their aid in furtherance of its early completion.

Cincinnati, Peru and Chicago Railroad.—A meeting of the directors was held at Laporte, on the 28th ult., at which time Hon. J. B. Niles of that place was elected President, of the company, and Jesse Higgins, of Peru, Secretary. The affairs of the company are in a flattering condition and all the indications are that this road will be finished at an early day. Contractors are at work at different points along the line; much of the grubbing is already done and grading has commenced.

Covington and Lexington Railroad.—The track layers have got four miles beyond Boyd's. In a few days the road will be opened to Robinson's—55 miles from Covington. A connection will be made by omnibusses between Robinson's and Paris, by which the trip between Covington and Lexington can be accomplished in day light.

The road is now penetrating a more productive country and its business rapidly increasing. The receipts average about $250 a day.

Evansville, Indianapolis and Cleveland Railroad.—From the Cleveland Herald we learn that Hon. O. H. Smith, President of this company, has been on a visit to that city with a view to procure co-operation in the construction of this line; on which occasion he addressed a meeting in his usual happy manner, after which a number of resolutions approving of the road, and showing its importance to Cleveland, were passed, and the meeting adjourned.

Pacific, Mo., Railroad Company.—The newly elected Board of this Company has re-elected Thomas Allen, Esq., President, and Hudson E. Bridge Vice President. The thirteenth stockholder. required by the charter, and not chosen at the last election, will be balloted for at the office of the company in St. Louis, on the third Monday of this month.

MONETARY.

At the East we have to note a continued scarcity of money, the Bankers and Brokers being unable to supply the demand of their regular customers.

The subject of war in Europe is attracting a great deal of attention, and opinion is divided as to the ultimate effect of the war upon this country. Should the United States stand entirely aloof, as she doubtless will, capital will flow here for investment. American securities now held in Europe, maintain their value, while consols, the favorite investment for capital, have depreciated within a few days, as much as four per cent., and other Continental Securities have fallen as much as twenty per cent. in view of the war.

Money rates at 7 ℔ cent. on call, 10@12 ℔ cent. for first class short paper, 12@15 ℔ cent. for railroad securities.

The Stock market has been quite depressed during the last week; our quotations will show a falling off in prices of Eastern Stocks generally, while some of our leading Western roads have advanced.

Foreign Exchange we quote at 110@112.

The following sales were made by Simeon Draper on the 28th ult., viz:

$1,000	Col. Piqua, and Ind., 1st mor.	Bonds	$78	00
2,000	do	do	77	25
5,000	do	do	75	75
1,000	do	do	75	12½

5,000	do	do	do	do	92	50
20	Shares Mad., Ind. and Peru RR.				55	00

At the West, we note a continued depression in monetary affairs, the demand being in advance of the supply. The ruling rates for money are from 1 to 1½ ℔ month for number 1 paper, 2 ℔ cent. for less known; while Railroad Stocks, though amply secured, are hypothecated for cash at 2 ℔ cent. ℔ month.

The Stock Market feels the pressure in monetary affairs very sensibly. The great demand for money to carry on roads now under way, compels a heavy sacrifice in the way of shaves on some of the lines, and the abundance of this class of securities in market, has the effect to depreciate them below their actual value.

Our Stock quotations will give the transactions of the week, from which it will be seen that our completed Western roads fully maintain their standing as compared with Eastern lines.

The Mad River and Lake Erie Railroad has declared a dividend at 10 ℔ cent. payable on the first of May in Stock. This road has been much improved during the year, and has earned, we understand, 12½ ℔ cent. on the stock, but the income of the road has been expended in building an additional piece of road and depot buildings required by the increased business of the road.—The directors have declared the dividend payable in stock in preference to borrowing the money wherewith to pay it in cash.

SUDDEN CHECKS TO RAILROAD SPEED.—It is computed that the effect of a sudden and accidental stoppage to a railroad train, the cars going at 20 miles an hour, is equivalent to a fall of thirteen feet and a half; at a speed of 40 miles, to a fall of 54 feet, while 50 miles an hour would give a smash, as if we had come from the top of a steeple of 84 feet.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

S. S. POST,
Chief Engineer and Superintendent.
Cincinnati, April 13, 1854.

TO ENGINEERS.

THE Nashville and North-Western Railroad Company wishes to employ an Engineer-in-Chief. Early applications are solicited. Applicants are requested to furnish references and testimonials of their qualifications.

JNO. A. GARDNER, Pres't,
Nashville, Tenn., Apr. 13, '54. N. & N. W. RR. Co.

Office Dayton & Cincinnati RR. Co.
CINCINNATI, April 7th, 1854.

NOTICE is hereby given to the Stockholders of this Company, that the eighth instalment of five dollars per share is required to be paid on the first day of May next. By order of the Board of Directors.

JOHN C. THORPE,
Apr. 13-tt. Sec'y.

Change of Time on Cincinnati, Hamilton, Eaton & Richmond Railroad.

ON and after TUESDAY, April 4th, 1854, the Morning Train for Richmond and Indianapolis, will leave Depot, foot of Sixth street, at 6 o'clock, A. M.

Passengers by this Train connect at Indianapolis with the 1 o'clock, P. M. Train on Lafayette and Indianapolis Railroad for Lafayette and Chicago; arriving at Chicago by 9 o'clock, P. M., of same day, being 9 hours less time than by any other railroad route leaving Cincinnati.

Also, connect at Indianapolis with 1.15 P. M. Train for Terre Haute.

Trains for St. Louis leave Chicago at 11 o'clock P. M., after the arrival of 1 P. M. Train from Indianapolis in the morning, making this the quickest route by far between Cincinnati and St. Louis.

Evening Train will leave as usual, at 3.30 P. M. connecting at Richmond with 7 P. M. Train for Indianapolis; arriving at Indianapolis at 10.30 P. M.

Chicago and Lafayette passengers, by this Train, sleep at Indianapolis, and resume at 6, A. M. next morning,

NOTICE TO CONTRACTORS.
LOUISVILLE AND SANDUSKY RAILROAD COMPANY—1st DIV.

SEALED PROPOSALS will be received at the office of the Company, in Piqua, Miami county, Ohio, from the 1st until the 18th day of April next, for the grubbing, grading, masonary, bridging and superstructure of the first division of the above named Road, extending from Huntsville to Piqua, and covering a distance of 30 miles.

The work will be divided into two or more sections, and bids may be made for one or the whole, and with or without the laying the permanent track and ballasting.

The line, plans, profiles, maps and specifications may be seen at any time after date at the above office, where all proper information will be given by the Chief Engineer.

From bidders, personally unknown to the Company, testimonials of their responsibility will be necessary.

The speedy, prompt and faithful execution of the work, being a paramount object of the Company, the right is reserved to accept such proposals as will secure that object, without default, and to reject all if none are satisfactory.

The line is of easy access, by Railroad, at each end, and passes over a country which for profitable work, for general healthfulness and for abundance and cheapness of supplies, cannot be surpassed in the Western States.

By order of the Board.

E. COOKE, President.
mr. 30tt.

OFFICE OF THE AGENCY OF THE
Indianapolis and Cincinnati Junction Railroad Company.
No. 23 West 6th St., between Main and Walnut

Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights, now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft.

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet. Also, 4 and 4½ feet Teunon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street.

MEMPHIS & OHIO RAILROAD.

SEALED proposals will be received at the office of the Memphis and Ohio Railroad Company, at Memphis, Tenn., until the 15th day of April next, for the grubbing, clearing, graduation and masonry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted security for the completion of the work, at the time, and in the manner specified, and contracts will be let in sections, or for the entire work, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, should none prove satisfactory; and it is desireable that all propositions should be submitted with the view of preparing the whole work for the iron as soon as possible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specifications may be seen at the office of the company, after the 1st of April.

mar.16-1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.

OFFICE—No. 2 Pine street, cor. of Broadway,

NOTICE TO CONTRACTORS.

PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrensburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

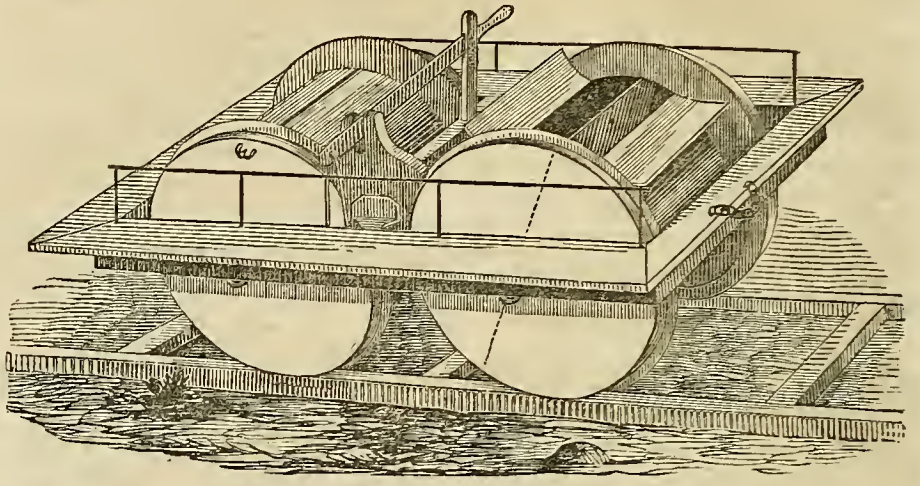
Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.

The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.

THOS. ALLEN, President.



THOS. S. O'SULLIVAN, Chief Engineer.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S
PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th.—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

Mr. JOHN LIGHTNER:

Sir:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION: as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

WM SHERBURNE,

Cincinnati, Wilmington and Zanesville Railroad.

OPEN TO CIRCLEVILLE.—Two daily Trains, (Sundays excepted) between Washington and Cincinnati, and one daily train between Circleville and Cincinnati. On and after Tuesday, March 14th, 1854, until further notice, trains will run as follows:

Upward train for Circleville, leaves Cincinnati 7:45 A. M., and arrives at Circleville, at 2:40 P. M.

Upward train for Washington, leaves Cincinnati at 3:10 P. M., and arrives at Washington at 8:05 P. M.

Downward train leaves Circleville at 12:15 P. M., and arrives at Cincinnati at 7:45 P. M.

Downward train from Washington, leaves at 6:30 A. M., and arrives at Cincinnati at 11:25 A. M.

Trains will stop for passengers as follows: At Williamsport, Four Corners, New Holland, Washington, Rattle-Snake, Sabina, Cross Roads, Wilmington, Sligo, Clarksville and Morrow; and on the Little Miami Road at Deerfield, Butterworth's Water Station, Loveland, Miamiville, Milford and Plainville, and on proper signal hy flag, or to the Conductor, at Branch Hill and Linwood, at Turnpike.

The downward Trains connect at Morrow with the Trains on the Little Miami Road for Columbus.

Lines of Omnibusses will run hetween Circleville, Chillicothe and Lancaster, connecting with the morning train from and evening train to Cincinnati.

Fare from Cincinnati to Washington.....$2 25
" " " " Circleville..... 3 00

For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.
J. HOWELL, Conductor.

☞ The Company will not be responsible for haggage exceeding $50 in value, unless the samo be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.
mar. 23

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

FAIRBANKS' SCALES.

Railroad Track Scale---50 Tons.

DEPOT SCALES 12,000 LBS.

FAIRBANKS & CO'S

PLATFORM SCALES,

Long known—Severely tested—Always right—
The acknowledged standard—Adapted to
every required operation of weighing, as

Railroad Track and Depot Scales,

In use on nearly all the principal Railroads in the United States and Great Britain.

WAREHOUSE SCALES,
Dormant and Portable.

HEAVY PORTABLE SCALES,
On Wheels,
For Foundries, Rolling Mills, Iron Houses, &c.,

STORE SCALES,
Various Modifications.

COUNTER SCALES, &c.,

HAY & COAL DEALERS' SCALES,
Made entirely of Iron and Steel.

GENERAL AGENTS:

FAIRBANKS & CO., 89 Water Street, New York.
TRABER & AUBERY, Cincinnati.
L. F. BURGESS, Cleveland.
BROWNING & MAYER, Indianapolis.
C. L. HARMON, & CO., 197 South Water St. Chicago.
S. M. EDGELL & CO., 20 Pine St., St. Louis.
W. B. BELKNAP & CO., Louisville.
M. P. HUTCHINS, Detroit.
J. & F. DAWSON, Charleston, S. C.
GEO. C. EWING, 21 South Charles St., Baltimore.

MANUFACTURERS:

E. & T. FAIRBANKS & CO.,

ST. JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.,
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

Alabama & Tennessee.	Huron & Oxford.
Allegheny Valley.	Illinois Central.

THE INFLUENCE OF A EUROPEAN WAR ON AMERICAN RAILWAYS.

Much apprehension has been felt in regard to the influence of a European War on American stocks and securities. That apprehension has already had an effect in alarming the timid and enhancing the interest of money.—The question naturally arises, will this effect be increased or diminished? Will money be plenty or scarce? and, as a consequence, will railways go on as rapidly as they have done, or for the time be checked up?

Now, although we may not be able to solve so complex a problem, and arrive at exact results, yet one thing we can do, by the lights of reason and experience. We can trace, one by one, the chief causes which are at work to produce good or evil results. We shall begin with the *evil*, and look the worst in the face.

1. War confuses and disarranges all the ordinary paths and routine of political economy; so that one business is diminished or destroyed, and another created or increased.—For example, the blockade of Russia by England, cuts off the importation or supply of certain raw materials of manufacture, and that manufacture is at once paralyzed. So, also, a war increases the demand for military and naval supplies, and for provisions. As a consequence, the manufacture and production of these articles increase, and so do the prices. We know that both these effects have already been produced in this country. Thus war deranges the routine of political economy, and that in the aggregate, is an evil.

2. War, by increasing the demand for men, in armies and navies, diminishes the number of agricultural laborers, and *will diminish emigration to this country*. The consequence of this is a high price for labor, and that is, so far, injurious to railways.

3. War increases the demand for public loans, and this increases the interest of money. So far as Europe is concerned, therefore, this is against the supply of money for railway purposes.

These are undoubtedly, the principal and most potent evils to be apprehended from a European War. Against these there are several important considerations to be balanced on the other side.

1. The *fear* of any danger is quite as bad in the money markets as the danger itself.—The influence of fear and doubt, of an impend-

ing doubt, has been felt now for a year, and has been the sole cause (with the exception of an excessive importation) of the pressure in the money market. The fear is now over; the danger, whatever it is, has come. After a few weeks of fluctuation, it seems to us, there will be a re-action, as to the doubts and fears; for it will soon be seen, that war produces but little effect on the interior of countries not invaded.

2. The effect of war loans is already experienced to the full extent. Nearly all the Continental powers have made large loans, and made them at good rates. No more need be apprehended on that score.

3. The moment the war becomes really burdensome, and the people of Europe in any way convulsed or alarmed, American securities will come at once into demand. This is inevitable. American affairs are fully understood in Europe, and if there is to be the least doubt, as to the stability of the European Governments, half the monied men there, will rush into American stocks and securities for investment. It is true, this will not take place largely, unless there is considerable agitation and convulsion there, but the war cannot continue without great hazards to the whole structure of European society. It is to be a violent and dangerous war, convulsing all the social elements, and hazarding the existence of all governments.

4. The United States are *entirely free from that convulsion, without the remotest prospect of being drawn into it.* A very important fact is that Great Britain has yielded (what she has always claimed, and what we made the war of 1812 for,) the *right of search.* There will, therefore, be no collisions with our shipping, and we have no pretence or desire to be other than neutral. The neutral trade is a profitable one. and while the commerce of Russia, England, France and Austria will to some extent be deranged by war, ours will be at the utmost hight of prosperity, flourishing over all the globe.

5. The supply of capital for railways has not come from Europe, to anything like the extent supposed; although undoubtedly the part derived from there was necessary to our rapid progress in the railway system. The great source of railway means, is in the *surplus capital of our own country;* and that is vastly greater than is supposed. Allowing for the difference between the real and assessed value of property, and taking a rate of interest much below what we know to be made in Ohio, we have the following results:

Value of property	$10,000,000,000
Income, at 8 per cent	800,000,000

Eight hundred millions of annual income are received in this country in the totality of its property. Now, considering that half the people live on labor only and are excluded from this income, we think that half this income, viz: *four hundred millions* are every year put in new enterprises and investments, lands, houses, mills, factories, stocks, banks, railways, etc., etc. Now, of this sum, one-fifth, or *eighty millions*, could be placed in railways without difficulty if the people willed it, in other words, thought *that* was the best investment. It depends on that only. At $32,000 per mile, eighty millions will make and finish 2,500 miles of railway per annum, and that is all that is necessary to finish, in four years, all the really needful and valuable lines in the whole country.

It is therefore, perfectly clear, that the people of the country *can* finish all their railways with their own money if they please. Unquestionably this would leave no margin for merely speculative and fancy lines, and in that respect, self-dependence would be a good thing. *Fancy stock* has done the country great mischief; and if it could all be destroyed, we should be better off.

6. In the meanwhile, the surplus capital of the country is increasing with immense rapidity. Our railways in 1854 will divide about *thirty millions* in dividends; our banks will divide *twenty millions*; our ships will divide *thirty millions*, and the profits of trade, agriculture and manufacture, are almost beyond calculation.

It is plain therefore, that the prosperity of this country cannot be seriously checked by wars in other quarters of the globe; and looking calmly and seriously to the general balance of the account, we think the effect of a European War, however general it may be, as on the whole, favorable to the commercial interests of this nation. No country has such an industry based on such solid and secure foundations; no country increases in wealth so rapidly; no country has so much the confidence of those who fly from evil, and of those who seek profit from capital. English, German, French and Spanish, all invest their funds here for security; while the exile from oppression invests his life and labor on our soil. It is necessary that such a country should be developed, and that extending from ocean to ocean, it should be connected by railways in every part, as no other country has been or can be. It is necessary to expand the industry which creates capital, and unite the various parts whose harmony is essential to the security of the whole. We fear nothing therefore, from foreign convulsions; nothing from any temporary suspension of loans; nothing from the doubts of the timid. It will be long before the storms which sweep over other lands, can injure this; and while we may by our vices deserve misfortune, we have yet a prosperous gale, and may rely on success till we have forfeited the smiles of Heaven by our own misconduct.

☞ Engineers are referred to Mr. Jno. A Gardner's advertisement on page 122.

Railroads.

HANNIBAL AND ST. JOSEPH RAILROAD.

We have mentioned this work in our previous numbers, but as it is likely to become one of the most important lines of railway in the West, we shall give more in detail the *elements* of the road, and its present prospects.

The work is one of three or four to which the state of Missouri has lent its aid, and that in sufficient amount to secure its completion. In addition to this the Government of the United States has granted alternate sections, whose value is estimated at several millions of dollars. The road, therefore, will not only be completed, but will be a premium stock. The route is from Hannibal to St. Joseph, on about the 39°40′ parallel of latitude, and in the most direct line to the central route of the Pacific Railway. The road will pass almost directly west from Hannibal, on the Mississippi, through or near Palmyra, Shelbyville, Bloomington and Chillicothe to St. Joseph, on the Missouri.—The total length of the road is 202 miles, and the contract cost, as reported by Mr. Bucklin, its able engineer, including interest, is $4,934,512. Making allowance for the increased price of iron and labor, as well as additional depots and furniture, we may consider the entire cost of the Hannibal and St. Joseph railway at $6,000,000. The stock of the company is by charter, $2,000,000, with power to increase it to $5,000,000. It is very evident from the amount of lands and credits held by the company, that the stock will command a premium, and consequently may be increased to the amount of five millions if necessary.—Taking $2,000,000 however, as the amount, the following is the statement of its means and cost:

Stock	$2,000,000
State Loan	1,500,000
Value of Lands	6,000,000
Means	$9 500,000
Ultimate cost	6,000,000
Surplus Means	$3,500,000

The amount of the land grant is 800,000 acres, and Mr. Bucklin, the engineer, states, after an attentive examination, that the price of land on the route varies from $4 to $20 per acre. The 800,000 acres have recently been valued by Eastern capitalists at $6,000,000, and we can scarcely doubt the justice of the estimate when we consider the rapid growth of Missouri, and the fact that North Missouri is already much improved; and, it is not extraordinary that the stock of this road is in demand. We noticed last week that the contractors had disposed of $1,000,000 of stock in the East. In reference to this, we are permitted by Gen. Paul Anderson, to make an extract from a private letter which gives the facts of this transfer.

"Knowing the value of our securities, and

of the road when put in motion, and that it must be the first to strike the western borders of this state at a marked and notable point of departure for California, Utah and Oregon, our friends and many of the Board conceived the idea that the stock and profits might be retained in Missouri. Many efforts were made to carry out this plan. But finding it difficult as well as slow, the Board consented, through their enterprizing and well-informed contractors, Messrs. Duff & Learned, of New York and Boston, to dispose of one half their stock to proper parties in the East. The chartered capital being $2,000,000, with the privilege of increasing it if necessary, the stock sold and held by the contractors is so divided as to insure prompt payment, and to render easy and prompt the negotiation of our securities, and at the same time to invite the co-operation of the largest railroad interests. These arrangements were consummated at St. Louis on the 20th ult."

We learn also that among those who have taken stock in this railroad, are some of the most influential railroad stockholders in New York, Boston and Albany.

By the extension of the Peoria and Hannibal Railroad Company's charter from Naples, Ill., to a point opposite Hannibal, the Hannibal road will be connected with the entire net-work of railways in Illinois, Indiana and Ohio.

CLEVELAND AND ERIE RAILROAD.

A bill has been introduced into the Pennsylvania House of Representatives, authorizing the Cleveland, Painesville and Ashtabula Railroad Company, to extend their road into Pennsylvania.

It provides that the acts of the General Assembly of Ohio, incorporating said railroad, shall be adopted so far as they can apply to the Commonwealth of Pennsylvania.

Provided, That said company shall not hold any lands in this Commonwealth, except such as shall be necessary for the location, construction and working of said road and for depots, engine-sheds, and gravel banks.

Provided, That said company shall not have power to issue bonds of an amount less than one hundred dollars, and shall in no wise transact the business of banking within this Commonwealth.

The said company to be subject in all respects to the laws of Pennsylvania.

The company is authorized to purchase and use the railroad heretofore constructed by the Franklin Canal Company, and connect it with any railroad leading from the city of Erie, and to construct their road into or through that city.

Provided, That at least two of the Directors of said Cleveland, Painesville and Ashtabula railroad company shall be citizens of the commonwealth of Pennsylvania. All of which shall be null and void, unless said company shall cause the contemplated Meadvillo railroad to be commenced within one year, and completed within the period limited in a bill therefor and now pending, from the point of intersection with the Cleveland, Painesville and Ashtabula railroad into the borough of Meadville.

The act to incorporate the Meadville Railroad Company, mentions among the Commissioners appointed to open books, the names of Wm. Case, A. Stone and Stilman Witt of Cleveland.

The company, under the bill, has the right to construct a railroad with single or more tracks from any point of the railroad now constructed between the city of Erie and the Ohio State line to Meadville, in the county of Crawford, and thence to a point of intersection with the Venango railroad, and to connect with railroads leading in the direction of Philadelphia and Pittsburgh.

It is also authorized to construct branches to the coal fields of Mercer county not exceeding twenty miles in length.

MEMPHIS AND CHARLESTON RAILROAD.

In a recent issue we spoke of the right of way having been granted to this company through the state of Mississippi, on condition that the sum of $125,000 should be subscribed to the Mississippi Central road, by this company. These terms do not seem to suit the Memphis and Charleston Company, nor the citizens of Memphis. The Common Council have taken the matter up and unanimously adopted the following resolutions, viz :

Resolved, As the sense of the Mayor and Aldermen of the city of Memphis, that the Memphis and Charleston Railroad Company, for the following reasons, should not accept the conditions upon which the state of Mississippi granted to said company the right of way through its territory:

1. Because said company will need all the available means at its command, for the completion of the main line of the road, without having a surplus to aid in building other enterprises.

2. Because, while our own State, in a liberal and magnanimous spirit, has just granted aid to the amount of at least five hundred thousand dollars, for the construction of the Northern and of the Mississippi Central road, running about fifty miles in Tennessee, if it terminates at Jackson, the state of Mississippi has *charged* our Memphis and Charleston road about $180,000, for the privilege of running about thirty miles through Mississippi.

3. Because the bonus paid, or to be paid, for such privilege does not inure to the state of Mississippi, but to the very road which our own state has just so liberally aided in its extension from Mississippi northward; and while we can pronounce the act, granting the right of way, as most illiberal, contracted and selfish in its ends, and especially in its petty details, we will at the same time, frankly say, that we believe the Legislature of Mississippi would have been governed by a policy as liberal and as enlightened as that of our own state, but for the representations of some who are deadly hostile to our road, because it does not run in a particular direction.

Resolved, That the Mayor forthwith telegraph Mr. Samuel P. Walker to cast the vote of the city of Memphis upon her stock in the Memphis and Charleston Railroad Company, against accepting the Mississippi charter granting the right of way through that State with its various connections.

At a subsequent meeting of the stockholders held at Huntsville, Ala., it was resolved to accept the right of way on the terms granted by Mississippi. The charter for the extension of the road from Crow Creek to Chattanooga through the Sequatchee Valley, was accepted. Col. A. E. Mills resigned the Presidency; Samuel Tate, Esq., of Memphis, the former Treasurer, was elected to the vacancy.

EVANSVILLE, INDIANAPOLIS AND CLEVELAND STRAIGHT LINE RAILROAD.—We have received a copy of the "exhibit" of this company from which we gather the following particulars, viz :

The company was organized under the general laws of the state of Indiana, May 12, 1853. The length from Evansville to Union is 225 miles, making Indianapolis a point, distant 150 miles from Evansville, and 75 from Union.

The road will be laid with heavy T rail.—In its alignment it is only three miles more than an air line between Indianapolis and Evansville; the maximum grade is but 39 feet to the mile. The line from Indianapolis to Union, 75 miles, is without a curve.

The estimated cost of the road fully equipped, with depots, shops, etc., is $23,202 per miles, cash. The means of the company now amount to $1,060,000, not including contractors' stock. Included in this amount are the bonds of the city of Evansville, $200,000, and Lamasco, $50,000. Of these bonds, $100,000 of the first and all of the latter, as well as an equal amount of the company bonds, will be offered for sale to raise the means for the purchase of iron for the road. The company bonds are secured by mortgage upon the lands of the company.

Evansville is the south-western city of Indiana, situated in the "pocket," with a population of some 10,000. It is 213 miles below Louisville, and 363 miles below Cincinnati, by river, while it is only 150 miles in a direct line from Indianapolis. It has no rival city to contend with, and will doubtless be much benefitted by the opening of this road. The Evansville and Illinois road, now open to Vincennes, has already caused a very sensible increase of property. When this road shall be completed and a direct connection with the central and northern portions of the State can be had, it will unquestionably become a heavy shipping point, as there is generally abundance of water in the river thence to the mouth of the Obio.

The President, O. H. Smith, Esq., and W. Carpenter, Esq., the Vice President, are untiring in their efforts to push the work to completion.

Communications.

THE GREAT PACIFIC RAILROAD TO OREGON.

The following communication, addressed to E. Gest, Esq., as President of the Fort Wayne, Lacon & Platte Valley Railroad company, has been sent us for publication. It contains views of the Pacific Railroad worthy the attention of the public. The subject is an exciting one, in which every citizen of the Union is interested, and any thing giving light upon the subject is acceptable.

Mr. Simpson speaks of a map of Oregon, by Col. John B. Preston, sent to us. This map, in conjunction with the Hydrographic maps of Col. Gilpin, will give the best possible view of the several routes of the proposed Pacific Roads. We are so fortunate as to have a set of these last named maps, which we shall be happy to show any of our friends.

We commend Mr. Simpson's communication to our readers:

—

E. Gest, Esq.,

President of the North Pacific Railroad Company:

Sir:—I have noticed with much pleasure and satisfaction, various reports of the union of all the great Eastern and Northern railroad interests in one main trunk line, commencing at Fort Wayne in Indiana, and terminating, for the present, on the Missouri river, opposite Council Bluffs, with the avowed intention of extending the same trunk road up the valley of the Platte river, and through the South Pass to the Pacific Ocean. This is the most formidable move towards the commencement of a great Continental Railroad yet set in motion, and from all the circumstances attending it, the conviction forces itself upon my mind that *this road will of necessity be built.* The only object I have in addressing you on the subject, is to direct your attention to the *final Pacific terminus.*

By continuing up the Sweet Water and following along the southern base of the Wind River Mountains, you reach the summit level of the continent on the dividing ridge between Utah Valley and the great lava plain of Oregon, where waters gush forth upon the same level and flow to both Oceans. From this point, the route is nearly a due west course; crossing Snake River at Fort Hall, it continues along the southern base of Salmon River Mountains to Fort Boise, where it re-crosses Snake River continuing westward, avoiding all the high and difficult mountains of the north, and strikes an excellent pass in the Cascade Mountains, opposite the head waters of the Willamette River. Entering this favorable pass, you are conducted through the great Sierra of the North and ushered into the beautiful park and floral valley of the Willamette, thence following it down to Salem, the present seat of the Territorial government, thence to Oregon City and Portland, the largest and most flourishing commercial towns now in the Territory, and thence down the Columbia river to Astoria, with a bifurcation from the mouth of the Cowlitz river to Steilacoom, on Puget Sound. This route contemplates the only natural water grade of of the North American continent, with an average grade to the mile, from the mouth of the Platte to the summit level of the dividing ridge between Utah Valley and the great plain, of about six feet, and from the summit of the dividing ridge to the mouth of the Columbia river, of about three and a half feet; terminating at the most central and natural commercial point on the Pacific sea-board, which also boasts of a harbor of unequalled capacity and beauty in the known world. It is also on a direct line from New York to Shanghae, in China, is four hundred and twenty-five miles nearer than from San Francisco, and over four thousand nearer than from the Isthmus of Darien, and is only one hundred miles further to the Sandwich Islands than from San Francisco. It is also at the base of the northern coast fisheries which no others in the world equal, and *it is the* GATE *to the entrance of the great whale fisheries of the North Pacific Ocean.*

Immense sources of national wealth also lie north of the Columbia river. Iron, copper and lead, in exhaustless stores, bituminous coal equal in quality to the best English coal, abounds in the vicinity of Puget Sound and on Vancouver Island. Extensive forests of fir, cedar, oak, and laurel, and the finest spar and ship timber in the world, abounds along the coast north of the Arctic Highlands, with inland harbors in an almost endless variety of form, and to an almost unlimited extent.

The mean temperature of the climate of Astoria is about equal to that of 38° on the Atlantic — the Isothermal zodiac, through which flows the world's commerce, bears north on the Pacific, nearing the southern coast of Asia; it then bears gradually south, passing through Shanghae and Canton, in China, thence onward to Bombay, in India, London, in England, New York and Astoria, in America, which shows the mouth of the Columbia river to be in the natural current of the commerce of the world.

Accompanying this letter is a map of Oregon, west of the Cascade Mountains, embracing the coast and harbors from the California line north to British Oregon; it is the most accurate map of that country ever published, most of which is sketched from positive surveys, the other parts being sketched from the most anthentic sources, viz: from information derived from those who have explored its various portions. Having traversed a large portion of it myself, I am able to speak from personal observation, which is also the case in regard to the route from this city to Fort Vancouver. The blue line marked on the map designates a route running west from Humboldt river to Goose Lake, thence in a northwesterly direction to Rogue River, Umpqua, Willamette, and the Columbia to its mouth; the red line designates a route running west from Forts Hall and Boise to the Central Pass in the Cascade Mountains, thence down the valleys of the Willamette and Columbia to Astoria. This latter runs through the great calcarious plain of Oregon, and with a slight divergence south from Fort Hall, it may strike Snake River at the great Sho-Shone Falls, the eighth wonder of the world. The fissure through which the river passes, is a rent in the solid rocks caused by volcanic action, and about a half a mile below the Falls, its walls, from the surface of the plain to the water below, are at least one thousand feet perpendicular. The shape of the Falls is similar to Niagara, being a crescent, with small and irregular columns of basaltic rock standing across the stream and between the main fall and the first break of the water above, through and among which the stream whirls and plunges till it takes its final leap and looses itself in the great abyss below. The entire fall is about 300 feet, and when near it the roar is most deafening. A vast column of spray continually rises to a hight of several hundred feet, exhibiting all the prismatic rays of the solar spectrum, which, in a bright sun, wreaths the spray column with rain-bow hues, and crowns it with a diadem of gems radiant with light. This wonderful natural curiosity has been visited but by few voyagers, and I am not aware that any authentic description of it is yet extant. It occupies very nearly a central position in the great calcarious plain; its direction bears slightly east of north from Rock Creek, on the emigrant trail, distant about five miles.

This interesting plain is nearly barren of vegetation, except the artimesia and greese bush, the small valleys skirting the banks of the streams, affording the only nourishment for animals. It appears to have been one vast volcanic crater of more than three hundred miles in extent, where entire ranges of mountains have literally been consumed, the cracks and fissures on the surface of whose hardened lava being the effect of subsequent volcanic action. Diamonds may be the product of its ashy soil. Nevertheless it interposes no obstacle to the construction of a railroad; on the other hand it offers the greatest inducements; except the canons, its surface is uniform, with rock ready broken for the construction of bridges at the crossing of streams.

Examine the route and estimate the importance of the mouth of the Columbia river, before locating the main trunk of your great road terminating it at San Francisco. I can do nothing more than call your attention, and through you the attention of the company over which you preside as its chief officer, to the infinite superiority of the mouth of the

Columbia river, in point of capacity of harbor, centrality, and national importance to that of San Francisco, and ask you to examine it on its merits. Do not overlook the coast and whale fisherica,and more especially the oceanic and Oriental commerce. The destiny of America, to a greater or less extent, depends on the proper direction of the Eastern commerce. This road will bring about a new order of things; it will change the current of the commerce of the world, and transfer its theater from the Baltic, Caspian and Mediterranean Seas, to the Pacific Ocean, where Russia, England, France and America must concentrate their naval forces. Again I say, the mouth of the Columbia is *the point*. Look to it before it be too late.

Very Respectfully,
GEO. B. SIMPSON.

Independence, Mo., March 25, 1854.

ANNUAL REPORT OF THE ENGINEER OF THE PHILADELPHIA GAS WORKS.

To the Trustees of the Philadelphia Gas Works.

GENTLEMEN: The Engineer respectfully presents to the Trustees of the Philadelphia Gas Works his Eighteenth Annual Report, detailing the operations of the Works for the year 1853.

In the quantity of gas manufactured, there is an increase of thirty-three million cubic feet.

Considerable difficulty has been experienced in obtaining a sufficient supply of coals, in consequence of which it has been found necessary to buy varieties of inferior productiveness at high prices, whereby the yield of gas to the pound of coal will be diminished, and its cost much increased. In other respects the results obtained are as favorable as usual.

There have been manufactured during the year, two hundred and forty-nine million four hundred and twenty-seven thousand cubic feet of gas; making an aggregate production from the works of sixteen hundred and sixty-four million three hundred and forty-four thousand cubic feet.

The product for the year has been distributed in the following proportions to the different municipal sections, supplied from our Works:

	Cubic feet.
District of Southwark	10,458,200
Do Moyamensing	5,810,700
Do West Philadelphia	2,765,720
City, including what is used at the Works and offices, and loss by leakage, and opening of mains for connections and service pipes	230,392,380
	249,427,090

The maximum product of gas in twenty-four hours, was one million one hundred and thirty-seven thousand cubic feet.

The maximum consumption, one million three hundred and eighteen thousand feet.

For the manufacture of gas, the materials used in a year, are as shown in the following statement:

Coal in store Jan. 1st, 1853	454,101	Bush.
" bought in 1853	635,991	"
	1,090,092	"
Coal carbonized in 1853	779,628	"
" in store Jan. 1st 1854	310,464	"
	1,090,092	"
Coke on hand Jan. 1st, 1853	123,000	"
" made in 1853	895,434	"
	1,018,434	"
Coke used under retorts	475,867	"
" at New Works	16,839	"
" in Office and Yard	7,140	"
" sold	513,588	"
Stock of coal on hand Jan. 1, 1854	5,000	"
	1,018,434	"
Rosin used	134,327	Lbs.
Lime used in purifiers	60,156	Bush.

In the department of distribution, the addition to the service pipes and meters, have again surpassed those of any former year, and the increase in number of lights is also greater than has been experienced. The main pipes laid in streets have been as follows: two inch pipes, seven thousand one hundred and fifty-two feet; three inch, three thousand seven hundred and forty-four feet; four inch, three thousand seven hundred and eighty feet; six inch, four hundred and fourteen feet; sixteen inch, seven hundred and twenty feet; twenty inch, seven thousand two hundred and fifty-seven feet; total, twenty-three thousand and sixty-seven feet. The entire length of street gas mains is now six hundred and twenty-seven thousand two hundred and thirty-three feet, or one hundred and eighteen and three-quarter miles.

There have been one thousand three hundred and sixty-four service pipes laid in new places, and the same number of new meters set; which, added to those before in use, make an aggregate of thirteen thousand and seventy-four services and meters.

Applications for gas have been registered to the number of three thousand two hundred and eighty, and the removals and discontinuances are one thousand nine hundred and fifty-four, leaving one thousand three hundred and twenty-six as the increase of consumers, and making the whole number of consumers at this time, twelve thousand nine hundred and eighty-nine. The lights added are twenty-five thousand four hundred and thirty-two private, and eighty-eight public; also, twenty-three in Independence Square. The directors of Southwark and Moyamensing, and West Philadelphia, report fifteen thousand six hundred and twenty-nine private, and four hundred and eighty-five public lights; which make a grand total of two hundred thousand eight hundred and forty-five supplied from our Works.

In one of the Western Public Squares, main pipes have been laid down by the direction of the Committee on City Property, but the gas has not yet been introduced.

By reason of the great increase of street mains and service pipes and meters the expenditures in this department have outrun the provisions heretofore made for it, to an extent that makes some further authoritative action a matter of imperative necessity. When in the year 1844 the Contingent Fund was devoted to the purpose of defraying the cost of the extensions of distribution, the number of services and meters required to meet the demands of new customers had averaged in the previous three or four years not quite three hundred and fifty per annum, and therefore the sum of thirty thousand dollars a year, to which the Contingent Fund was restricted, was deemed sufficient for this object. Since that period the annual applications for gas have become much more numerous, and particularly so since the recent large extension of the main pipes into all quarters of the City for the purpose of affording to every section the advantages of street lighting. The growth in this respect has exceeded all anticipations formed in regard to it, so that instead of the average of three hundred and fifty a year, on which the limitation of the contingent fund was based, the new services and meters furnished have increased to the large number of one thousand three hundred and sixty-four in the last year, and have averaged nearly one thousand two hundred and eighty the last three years. As a necessary consequence, the expenditures of this department have grown from the original estimate of thirty thousand dollars a year to over seventy-five thousand; and thus not only absorbed the whole of its own proper Fund, but have also encroached largely upon the resources designed for the enlargement of the Works and for Working Capital. All that can be derived from these sources is now exhausted, and the increase of street mains and service pipes and meters must therefore cease until funds are provided for their cost.

At the new Works in Passyunk, the principal structures are all roofed in and nearly completed; and as much progress has been made in fitting up the apparatus and its connections as circumstances allowed. Much delay has arisen in the prosecution of this work from the unusual scarcity of skilled laborers; and the difficulty from this cause was enhanced by the want of suitable dwellings for the accommodation of the workmen; in consequence of which it has been impossible to keep the desired force on the work; for in a season of unusual active employment, many workmen refuse to engage at a place so far distant from their residence; and it was found that skillful mechanics could be kept steadily employed, only by providing them with means of conveyance to and from their work, whereby much expense has been imposed on the Contractors and on the Gas Works.

The same difficulty of accommodations made it expedient to postpone the commencement of Gas Making Operations to the latest possible period; for the accomplishment of which it has been necessary to keep the apparatus at the old Works in the highest state of effieiency attainable by the most vigilant daily inspection, and the prompt renewal of the parts exposed to destructive agencies, without waiting for the degree of dilapidation ordinarily admissable. By these means the supply of gas has been thus far maintained without recourse to the New Works, and it is believed it may be carried through the present winter unless some unforeseen disaster should occur to diminish materially their effective condition.

Should the question of the erection of dwelling-houses for the workmen be left in its present unsettled state, in which no authority is granted to the Trustees and no incentive is offered to individuals to undertake their construction, very serious inconvenience and mueh useless expense will be the probable result.

Very respectfully submitted, by

JOHN C. CRESSON.

Engineer.

Philadelphia Gas Works, Jan. 13th, 1854.

—*Pa. Jour. Franklin Institute.*

Kentucky Union Railway Company.—A number or two since we noticed the chartering of this road by the Kentucky Legislature, and its proposed direction. We now give the following additional particulars from the Frankfort *Commonwealth*:

The 9th section of its charter reads as follows:

That the said Kentucky Union Railway Company, their President, Directors and agents are hereby vested with all the powers and rights necessary for surveying, locating, and constructing a railway from a point at or near Newport or Covington on the Ohio River, by the nearest practicable route to a point at or near the Cumberland Gap; and also a Railway from any point on said route to such a point on the southern boundary line of this state in a direction towards Knoxville, in the state of Tennessee as shall be necessary for a connection with any railway from that direction, and also for a branch or branches from said route eastwardly, if deemed desirable by the President and Directors of said company, through the mineral regions of Kentucky to the boundary line of the state of Virginia, etc., etc.

Among the incorporators, the names of the following gentlemen appear: James Hall, Edward D. Mansfield, Larz. Anderson, Stephen S. L'Hommedieu, John Kilgour, William Y. Gholson, and Rufus King of Cincinnati; J. M. Caldwell, George B. Hodge, and Thomas L. Jones, of Campbell; John W. Stephenson and John P. Winston, of Kenton; Daniel Breck, Addison White, Thomas Turner, Jr., John Speed Smith, and Henry T. Allison, of Madison; Garrett Davis and John Cunningham, of Bourbon; with others from the counties of Clarke, Laurel, Roekcastle, Knox, Estill and Owsley.

Capital stock, $5,000,000, with privilege of increasing to $10 000,000 if deemed expedient by stockholders.

Cincinnati, Union & Fort Wayne Railroad.—This road is an extension, virtually, of roads now in operation from Cincinnati and Dayton to Union, Indiana, to Fort Wayne, on the Wabash and Erie Canal. Being the commercial center of one of the best portions of the Wabash Valley. Fort Wayne is an important point, and one from which a railway connection with Cincinnati is very desirable.

The route, in passing nearly due south, to Union, will accommodate a section of the State which is now nearly deprived of railway facilities; but which, on account of its exceeding productiveness in grain and live stock, is adequate to the most ample support of the road proposed.

We are happy to be able to announce the prospect of a vigorous prosecution of the work on this line, from Union to Fort Wayne. The President of the company, Jeremiah Smith, Esq., has recently visited New York and Boston, to perfect arrangements for the iron necessary to complete the road, and there is now every prospect, we are assured, that it will be opened for business as soon as the track can be laid. As the management of this enterprise is entrusted to men of large experience, great prudence and unfaltering energy, we anticipate for it a speedy completion and highly remunerating business.—*Railroad Journal.*

Cairo and Fulton Railroad Company; Missouri Portion of the Line.—From the *Arkansas Traveler* we learn that this company has been organized, and the articles of association duly signed. John M. Johnson, Esq., is President.

The route has not yet been definitely settled. The estimated length of the line is about 85 miles, which entitles the company to 326,400 acres of government lands, already granted to the state for railroad purposes.—The quantity of "swamp lands," subject to county subscriptions, is estimated at 192,000 acres, the total value of *all* which is estimated at about $1,500,000.

The above estimates are based upon the supposition that, what is called the northern route be adopted. Should the southern route be selected, the proportion of government lands will be very small, as the line would be through *swamp lands* nearly all the way.

The county subscriptions offered are very liberal indeed; and there seems but little doubt that the road will be built in time to connect with the Arkansas portion of the line, thus opening a route from the mouth of the Ohio to the Gulf of Mexico, in Texas.

Hoosic Tunnel.—The question of submitting the Hoosic Tunnel Bill to the people, was decided in the Massachusetts House of Representatives on Saturnay, by a vote 171 in the negative, to 51 only in the affirmative. The bill has since beeome a law by the signature of the Governor.

A New Method of Firing Gunpowder under Water.—At a meeting of the Royal Institution, Jan. 20th, Prof. Faraday referred to the following experiment: Some copper wire had been covered with sulphuretted gutta percha, and after some months it was found that a film of sulphuret of copper had formed between the metal and the envelope. When half the gutta percha was cut away in any spot, and then the wire removed for about a quarter of an ineh, so that tbe only conducting medium was the thin film of of sulphuret adhering to the remaining gutta percha, it was found that an intense battery would cause this film to enter into intense ignition and fire gunpowder with the utmost ease. The experiment was shown in the lecture room of firing gunpowder at the end of eight miles of wire; and Mr. Faraday stated that he had seen it fired by this means through one hundred miles of covered wire immersed in a canal.

Belleville and Murphysboro' Railroad.—This road is surveyed to run from the city of Belleville, through Sparta in Randolph county, Murpbysboro, in Jackson county, to a point on the Illinois Central Railroad, about 40 miles above Cairo. The entire length of the road is about seventy-four miles, running tbrough a highly cultivated and excellent agricultural country, and traversing the rich and inexhaustible coal fields of "Big Muddy." A preliminary survey of the route has been made, which proves that the line is of an easy grade and favorable for construction. A competent corps of engineers, is immediately to be placed upon the line to make a thorough survey of the route and an estimate of its cost.

The following are the names of the present officers of the road: L. P. Sanger, President; H. L. Stewart, W. Truesdale, John A. Logan, John A. Wilson, Wm. Roseborough, A. J. Kuykendall, S. B. Cbandler, W. C. Kinney, W. W. Roman, J. W. Hughes, H. D. Bacon, John Cavender and Alexander Kaiser, Directors.

The Mississippi and Atlantic Railroad.—At a meeting of the stockholders of the Mississippi and Atlantic Railroad, at Vandalia, on the 25th ult., the following gentlemen were elected Directors, viz: Messrs. Winslow, Palmer, McMartin, Sandford, and Lanier, of NewYork; Brough, of Indiana; Archer, Young, Starkweather, Waschford, McCurdy, Walter and Allen, of Illinois.

Officers—John Brough, President; T. R. Young, Vice President; W. S. Waite, Treasurer; Edward King, Secretary.

It is stated that a corps of engineers is now on the line locating the road from Pocahontas to Illinoistown, and that the construction of the work is to commence immediately; but this same story has been reiterated for the last two years, and we place no more credit in it now than we did then. The truth is, the stock in the road is not yet subscribed, which is a serious difficulty in the way of its construction.—*Alton Telegraph.*

The City of Memphis, and the Memphis and Ohio, and Mississippi and Tennessee Railroads.—A resolution has been adopted by the Common Council of the city of Memphis, to hold an election in that city on the 6th of May next, to ascertain if the people of Memphis will authorize the city to subscribe the sum of one hundred thousand dollars to the Memphis and Ohio Railroad Company, and the sum of fifty thousand dollars to the Mississippi and Tennessee Railroad Company.

And, if a majority of the votes then cast be "for subscription," the Mayor is hereby authorized to subscribe the sum of one hundred thousand dollars to the Memphis and Ohio Railroad Company, and to sign and deliver to the President thereof, the bonds of the city, with coupons for that sum, in such amounts as he may desire; said bonds not having more than thirty years to run, and bearing interest at the rate of 6 per cent. per annum, payable semi-annually in New York or Philadelphia. But, before he can receive said city bonds, the President of the Memphis and Ohio Railroad Company shall file with the Mayor his written obligation, that the Company will pay the annual interest on said bonds until the railroad is finished to Brownsville, in Haywood county, Tennessee, and that they will locate the commercial depot for Memphis, between Main street on the west, the bayou on the east, Winchester street on the north, and Poplar street on the south, and grade and improve the streets around said depot. And the Mayor shall also subscribe the sum of $50,000 to the Mississippi and Tennessee Railroad Company, to be paid as provided for in the late amended charter of the city of Memphis; but before doing so, he shall require the President of said Company to give him his written obligation, that said Company will locate their commercial depot at some point in Memphis, between Beal street on the north, Hernando street on the east, Talbot street on the south, and Shelby on the west; and to grade and improve the streets adjoining thereto.

Cleveland and St. Louis Straight Line Railroad.—At the annual election of the stockholders of this Company, held at Lebanon, Indiana, on the 12th inst., the following Board was elected for the ensuing year, viz:

Directors—Erastus Hopkins, Massachusetts; Jos. A. Wright, Indianapolis; W. H. Harding, Indianapolis; A. J. Boone, Boone county; W. G. Coffin, Park county; Jesse Fordice, Putnam county; John Milligan, Montgomery county; Geo. W. Batcham, Jay county; J. W. Dodd, Grant county.

Officers—Erastus Hopkins, President; W. H. Harding, Vice President and Secretary; O. Bowen, Treasurer.

The report of the President was read; but we have no further particulars, than a rumor that the Ohio portion was under contract, and the contract ratified by the parties.

North Missouri Railroad—election of Directors.—The annual election of the Directors of the North Missouri Railroad, was held at the office of the Company, in St. Louis, on 3d inst. The following gentlemen were elected:

Col. John O'Fallon, Thomas T. January, Jas. T. Swearingen, E. G. Allen, A. Krekel, C. Case, Carlos S. Greely, Isaac H. Sturgeon, John D. Coalter, R. M. Renick, John Hartnett, Andrew Harper, Lewis Bissell.

The new Board of Directors of the North Missouri Railroad met recently, and organized. Col. John O'Fallon, late President of the Board, strenuously refused a re-election; whereupon the Board proceeded to ballot for a President. On the first ballot, Isaac H. Sturgeon Esq., of St. Louis, was elected, almost without opposition. Thomas T. January, of St. Louis county, was chosen Vice President, E. C. Willis, Esq., was re-elected Secretary and Treasurer.

The Board then adjourned to the 24th inst., on which day they will open and consider bids for the construction of their road.

Monongahela and Ravenswood R. R.—This Company was chartered by the Legislature of Virginia, at its recent session, with a capital of $4,000,000, for the purpose of constructing a railroad from the Pennsylvania line, at or near where the same crosses the Monongahela river, and from thence up the ravine of said river to the junction of Tygart's Valley and West Fork rivers; thence up the latter river to some suitable and convenient point at or near the mouth of Elk Creek, in the county of Harrison; and from thence up the most practicable route to the town of Ravenswood, in the county of Jackson, and to terminate at, or not more than fourteen miles from said town, in the county of Jackson; provided, that said railroad shall not enter or strike, or enter the ravine of the Ohio river between the mouth of the Little Kanawha river and the mouth of Sandy Creek, above the town of Ravenswood in Jackson county.

Thirty-three Guns for the Cincinnati, Wilmington and Zanesville Railroad.—The iron connection between this city and Cincinnati, was effected to-day. About three hundred of our citizens took a flying trip to Amanda this afternoon, where they met the locomotive Circleville, and a large delegation of Circlevillians, who were escorted to this city.

Thirty-three guns from Capt. Schleich's company announced the consummation of a result that is destined to revolutionize the entire business of this community, and develope a region of country that is unsurpassed in beauty and fertility, and destined at a future day, to attract and concentrate in our midst an amount of commerce and manufacture that will make Lancaster and the surrounding country one of the most desirable spots in the whole West.—*Lancaster Gazette, 6th.*

Railroad Consolidation.—A meeting of the Stockholders of the Cincinnati, Cambridge and Chicago, and the Cincinnati, New Castle and Michigan Railroad Companies, was held at New Castle, Indiana, on the 12th inst., to consider the propriety of consolidating the two Companies. A vote was taken upon the question, and over fourteen thousand votes were cast in favor of consolidation, and none against it. The consolidation was accordingly perfected, and the consolidated Company assumed the name of the "Cincinnati and Chicago Railroad Co."

The following Board of Directors was then elected: Col. H. Hanna, of Wabash county, Indiana; James Switzer, Grant county, Ind.; Judge W. March and T. J. Sample, Delaware county, Ind.; Judge M. L. Beurdy, Henry county, Ind.; S. Meredith, Wm. Butler, John Crum and Jesse Hiatt, Wayne county, Ind.; George M. Oualt, Indianapolis; Robert M. Moore, Richard M. Corwine and Caleb B. Smith, Cincinnati.

The officers elected were as follows: Caleb B. Smith, President; S. Meredith, Vice President; Thomas Newby, Secretary.

This road is a continuation of the Cincinnati Western Railroad, and part of the direct line between Cincinnati and Chicago. A large force is now at work, and the whole is progressing in a very satisfactory manner.—*Cincinnati Gazette.*

Lexington and Big Sandy Railroad.—We learn from the Lexington Statesman, that Mr. Apperson, President of the Big Sandy Railroad, last week obtained a subscription of $200,000 to the capital stock of that company. It is understood to be made by capitalists, who have purchased a site for a city four miles below Catlettsburgh, and on the condition that the road strike the river at that point.

Railroad Tax Decision.—The High Court of Mississippi has decided in favor of the legality of taxation for railroads. This is important to our interests, as a large amount of subscriptions to the Mississippi Central Railroad was involved in this decision, and the completion of this road, rendered certain by this decision, will contribute largely to the business and income of the great Northern road from this city.—*Miss. Ex.*

Cincinnati, Wilmington and Zanesville Railroad—Open to Lancaster.—On Tuesday of last week an opening celebration was had along this line to celebrate its completion to Lancaster. A numerous company was present on the occasion, toasts were drunk, speeches made, and the company reached home without accident.

Public Lands for Railroad Purposes.—The bill granting lands for railroads in Wisconsin, was lost in the House of Representatives on the 14th ult., which created some excitement among the members interested in land bills for similar purposes.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

CORRECTED TO WEDNESDAY OF EACH WEEK.

Money rates on Stock Collaterals at 2 per cent. per month.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possiblo to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

LAGRANGE & ATLANTA RAILROAD.—This road has at last been completed to West Point. This was long wished for by the traveling public. Travelers can now go from Montgomery to New York entirely by rail.

MONETARY.

From our last advices from the East, it would seem that the decline in monetary affairs, mentioned in our last, still continues, with no perceptible signs of alleviation. The Banks are discounting to the extent of their ability, and street accommodations are pressed to the utmost. Number one paper rates from 10 @ 12 per cent. at 60 and 90 days; Railroad securities from 15 @ 18 per cent.

In the Stock Market we note a decline in leading stocks, though the earnings for the month of March shew a large increase.

Foreign exchange is unsettled, the best names command 109 @ 109¼.

The redemption of United States Stocks at the Treasury Department, continues large, mostly from abroad, the remittances for which are in specie.

At the West we have to note no new feature in monetary affairs; the stringency in the market having reached its acme, matters are not likely to change for the worse, while there is but slight hope of any immediate relief. The war movement in Europe is just now the exciting topic, and until this excitement subsides, we cannot look for much change for the better. We commend our leading article, in this number, to the perusal of our patrons, as giving a common sense view of the ultimate effect of the war upon the United States.

The leading rates for money out of doors, are 1½ @ 2 per cent. per month; number one paper is a slight shade better. The stringency in money matters is not so much the effect of scarcity of capital, as the want of confidence. We feel assured that when the effect of the war in Europe becomes evident, and our capitalists discover that there is no real cause for doubt, money will be plenty.

The Stock Market is depressed, in consequence of the scarcity of money, and our leading roads have felt the effect, though we trust the decrease in value will be but temporary.

Exchange remains at our former quotations, and quite firm.

THE STOCK AND EXCHANGE BOARD, of this city, has been organized; the following are the officers—

T. S. Goodman,.....President.
E. M. Gregory,.....Vice President.
Peter Outcalt,.....Treasurer.
Charles C. Brown,.....Secretary.

IRON RAILROAD.—Officers elected for the ensuing year as follows: President, S. W. Dempsey; Directors, Jno. Campbell, R. B. Hamilton, Jno. Peters, Jno Ellison, J. O. Willard, Jno. Culbertson; Secretary, S. Richards; Treasurer, J. O. Willard.

Locomotive Works, Cincinnati.

THE undersigned having had considerable experience in the construction of Locomotives, are prepared to furnish them equal in efficiency and durability, to the best Eastern manufacture.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important inveution. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fabrenheit heat.

Armitage Anvils,—10 casks, assorted weights, now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

MEMPHIS & OHIO RAILROAD.

SEALED proposals will be received at the office of the Memphis and Ohio Railroad Company, at Memphis, Tenn., until the 15th day of April next, for the grubbing, clearing, graduation and masonry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted security for the completion of the work, at the time, and in the manner specified, and contracts will be let in sections, or for the entire work, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, should none prove satisfactory; and it is desireable that all propositions should be submitted with the view of preparing the whole work for the iron as soon as possible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specifications may be seen at the office of the company, after the 1st of April.

mar.16-1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vender will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.

NOTICE TO CONTRACTORS.

PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrensburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds ,or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.

The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.

THOS. ALLEN, President.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S
PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

Sir:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION; as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

Locomotive Tires and Car Axles.

THE undersigned is prepared to supply Railroad Companies and Builders with Tires and Axles of superior quality and finish, made from faggoted charcoal iron, formed and finished entirely under the hammer. For the character of the manufacture he refers to builders and companies who have used them in the West.

A. S. WINSLOW,
†mr24 9 and 11 West SecondSt., Cincinnati.

LOCOMOTIVE LANTERNS.

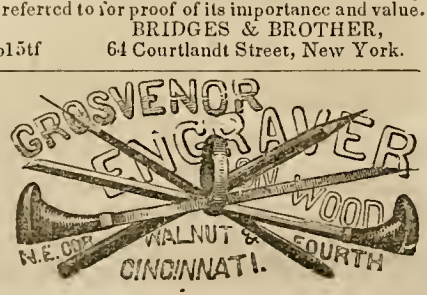
I AM manufacturing Locomotive Lanterns of the most approved form, with true parabolic Silver-plated reflectors, Copper Cases, and in every way equal to the best manufactured in the country. Orders from Railroad Companies in the West are solicited.

A. S. WINSLOW,
†mr24] 9 and 11 West Second St., Cincinnati

Norris' Locomotive Works,
PHILADELPHIA.

ENGAGED for many years in manufacturing Locomotives, offer to Railroad Companies to construct of any plan or size,

LOCOMOTIVES OF SUPERIOR QUALITY.



Our facilities for doing work have been largely increased this year, and orders can be executed with despatch.

Jy7 RICHARD NORRIS & SON.

ASHCROFT'S
METALIC STEAM GAUGE.
(BOURDEN'S PATENT.)

THE subscribers offer for sale this valuable Steam Gauge. It is adapted to Locomotive and other steam boilers, indicating with accuracy the continual variations of steam within the boiler, enabling the engineer to maintain a uniform and safe pressure. Any of the Eastern Railroads may be referred to for proof of its importance and value.

BRIDGES & BROTHER,
sep15tf 64 Courtlandt Street, New York.

CAR MANUFACTORY,
Dayton, Ohio.

E. THRESHER & Co., having enlarged their shops, are prepared to contract on favorable terms, for building every variety of Railroad Cars, in any quantity and at short notice, made of the best materials, and of the most approved workmanship.

They are prepared also to furnish jaws and boxes; the Washburn wheel, thirty and thirty-three inch, adapted to inside or outside bearing; cast iron frogs steel plated; and switches of the most approved patterns.

They also manufacture blacksmith tuyeres, Harris' patent; portable bolt forges; bolt heading and bolt cutting machines; upright drills, wheel presses; wood planers; tenoning and mortising machines; &c.

They respectfully invite the attention of railroad directors and superintendents to their establishment.

Dayton, January 24th, 1853. jan 25-†

FORGINGS.

AXLES, Shafting, and other Forgings, from the Gleadon Forges, for sale by
jan 17 GEO. GARDNER & CO., Boston, Mass.

MUSKINGUM WORKS,
ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville.

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

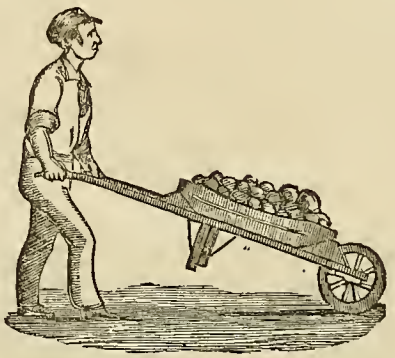
Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,



And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture, suitable for Railroad, Turnpike, Canaling, &c., in lots, to suit purchasers. Orders filled for any reasonable amount

ST. JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weigbed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.

STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PUBLIC WORKS OF PENNSYLVANIA.—In the Pennsylvania State Senate, the bill providing for the sale of the public works, has finally passed. The price is fixed at $10,000,000. The purchasers are authorized to construct a railroad from Columbia to the Ohio river. It will have to go back to the House for concurrence.

PROFITS AND VALUE OF WESTERN RAILWAYS.

There is an effort making in some quarters to check the progress of Western railways, by representing in the first place, that they cost more than they really do; and secondly, that their profits will be reduced by competing lines. These representations are, of course, made by parties who think their interests will be affected by the construction of new lines. They, therefore, wish to stop the new lines, not because they are likely to be unprofitable, but because they may possibly diminish the heavy receipts on other lines. This view, however, is entirely incorrect; for the extent, population, production and fertility of the West are amply sufficient to insure large profits, not only to all the works now constructed, but to all that are commenced. The great receipts on each new line that comes into operation, and the enormous annual increase on those that have been more than a year working, are sufficient proof to those who understand the resources of the West.

We are certainly not among those who wish to encourage hazardous speculations in railways. Such a course is hazardous to the true interests of railways, and should be discouraged for their sake, if for no other. But that is a very different thing from proceeding steadily on to supply the vacant places with the advantages of the railway system, and also improving old lines by making them more direct, and furnishing them with double tracks.

There is also another idea afloat among some Eastern men who have the conceit to imagine that *they* only are the financiers of the world; that the Western country is wholly dependent upon foreign or Eastern capital.—The absurdity of this idea may be learned by referring, for example, to the *relative* indebtedness of New York and Ohio railroads. By way of example, we may give the following table of cost and indebtedness of the New York and Ohio railroads, as far as we have the means of comparison:

	Capital.	Funded Debt.
New York Railroads	$58,215,000	$53,000,000
Ohio Railroads	19,180,000	10,327,400
New York—miles constructed		2,332
Ohio— " "		1,411
New York, cost per mile		$47,600
Ohio, " "		20,700

Now, here is an instructive table in every sense, on the real value of Eastern and Western railways. It appears that in New York,

the proportion of debt to capital is as 44 to 56 per cent, while in Ohio the debt is to capital only as 36 to 74 per cent. The Ohio roads, therefore, *owe less and have far more capital in proportion* than those of New York. Again it is shown by comparing the present debt with the original debts of the companies, that a large portion of the indebtedness, that is bonds of the Ohio roads, has been *converted into stock*. In other words the stock of the Ohio roads, at least most of them, is actually *worth more than their bonds*. This reminds us that two or three of the Western roads are at this moment offering their stockholders *stock*, instead of putting their bonds in market, the latter being difficult to sell, but the former will sell readily enough.

Lastly, the *reason* why Ohio railroad stock is worth more than that of New York, is shown in the fact that *they cost not one half as much*. As long as these facts shall remain as they are, it will be in vain to threaten Western companies that their roads shall not be built. That is not in the power of Wall street, or State street, or Threadneedle street to prevent. The Western people have outgrown their leading strings, and they have the power, as well as the will, to act independently. Cotton may fall, and Bankers fail, but the soil of the West is a bank that never fails, and its people have an energy and industry which are far more valuable, than banks or cotton.

The following tables we have prepared from all the reports in our possession, of the cost, length, receipts, expenses and profits of Western railways:

	Length.	Cost.	Cost per mile.
Little Miami.....	84	$3,191,000	$37,000
Cin., Ham. & Dayton...	60	2,659,653	44,327
Xenia & Columbus.....	54	1,310,700	24,300
Cleveland & Columbus.	135	3,870,467	24,300
Ham., Eaton & Richm'd	41	1,044,979	25,500
Mad River & Lake Erie.	167	3,110,148	24,000
Mansfield & Sandusky..	56	1,855,000	33,100
Mad., Ind. & Peru.....	159	4,889,000	24,500
Terre Haute & Richm'd	72	1,435,525	20,000
Galena and Chicago....	92	2,500,000	26,800
Michigan Southern.....	315	7,276,616	22,780
Michigan Central.....	282	8,018,505	30,500
Cleveland & Pittsburgh.	99	3,279,908	31,100
Greenville & Miami....	34	500,000	15,000
Columbus & Lake Erie.	61	1,170,000	20,000
15 roads.....	1,713	$41,811,501	$403,207
Average cost per mile.....			$23,500

We next come to the yield of these roads, which is presented in the following table:

	Receipts.	Expenses.	Profits.
Little Miami.....	$667,558	$315,426	$352,132
Cin., Ham. & Dayton.	321,793	120,836	200,956
Xenia & Columbus...	314,434	145,821	168,611
Cleveland & Col....	1,191,873	580,776	611,097
Eaton & Hamilton...	89,855	38,671	51,184
Mad Riv. & Lake Erie	540,518	427,117	113,601
Mad., Ind. & Peru...	516,414	248,339	268,075
Terre Haute & Rich'd	177,975	66,331	111,644
Galena & Chicago...	473,548	187,396	286,152
Mich. So. & Nor. Ind.	1,200,922	613,993	586,929
Michigan Central...	1,145,598	562,782	582,816
Cleveland & Pittsb'g	432,688	165,410	267,278
Aggregate	$7,089,173	$3,429,898	$3,599,275

Net profits on the above twelve railroads, nine and one-third per cent. There are no other roads finished and long enough in operation to give us full returns for one year.—As the receipts of all of these are rapidly increasing, it is quite certain that the net profits in the coming year will be more than 10 per cent.

The new roads just commencing, all promise to be equally productive. No country can produce anything like this, in the productiveness of capital, on so large a scale. Except the agriculture of the West, there is nothing in the United States equals it. Some of the older and longer lines show results much beyond that exhibited in this average. The Cleveland and Columbus road paid 28 per cent. dividends in 26 months. The Michigan Southern, made dividends of 17 per cent. in one year. The Little Miami made 11 per cent. The Xenia and Columbus made 12 per cent. The Galena and Chicago made 11 per cent.

The above tables and examples are enough to illustrate the general principle, that Western railways are exceedingly productive, and that the yield to capital thus invested, is enough to justify the efforts made to complete the various lines commenced, and pay foreign as well as domestic stockholders, an ample compensation for their investments.

The amount of capital necessary to complete the two thousand miles of unfinished railway in Ohio, will be about $40,000,000; which divided among five years, is $8,000,000 per annum. If it were necessary that this should be raised in Ohio, we believe it could be easily done. It would be but six dollars a head annually—an amount absolutely insignificant, when we consider the wealth aud prosperity of the people.

PEORIA AND BUREAU VALLEY RAILROAD EXTENSION TO HANNIBAL.—The citizens of counties along the proposed line of this road, are aroused as to the feasibility of its construction, and are doing their utmost in the way of individual and county subscriptions to aid the undertaking. The Michigan Southern and the Rock Island roads are interested in the connections offered by this line, and have, we understand, promised effectual assistance. Mr. Farnum, one of the contractors upon the Rock Island and the Bureau Valley roads, has offered to take the entire contract and complete the road within two years from Peoria to Hannibal. Surveying parties are already on a portion of the line, and subscriptions are coming in very liberally.

This will open up a connection for the Hannibal and St. Joseph road with Chicago and the North, in addition to the proposed direct eastern one through Pike county, Ills.

The city of Hannibal will take some $50,000 in this road.

GOLD PENS.—To such of our friends as need a *good* gold pen, we would commend a trial of those on sale by Messrs. MOORE, ANDERSON & Co., No. 28 Fourth Street, who keep a large and varied assortment of the best manufacture, and to suit all hands. Try them.

NASHVILLE AND NORTH-WESTERN RAILROAD, TENN.—The following is a list of the Board Directors of this company:

John A. Gardner, President; H. L. Claiborne, Secretary and Treasurer. Directors: Jos. H. McEwin, Michael Burns, John B. Johnston, R. C. McNairy, W. F. Cooper, Davidson county, Jas. L. Bell, Dickson county; Thos. Wyly, Humphreys county; Wm. Fitzgerald, John W. Blanton, Henry county; Jeptha Terrel, W. W. Gleeson, Weakley county; Geo. H. Carey, Wm. Wyatt, Wm. B. Isler, Obion county.

The line of this road commences at Madrid Bend, on the Ohio, in Obion county, passing eastwardly, and crossing the Mobile and Ohio road, in the same county, thence, via Dresden and Reynoldsburg to Nashville. The charter was obtained in Jan. 1852, and valuable amendments have been made to it, giving the company ample privileges. The company has the advantage of "state-aid" in conjunction with other roads. The line will shortly be under contract, a portion of it in July.

By reference to our advertising columns it will be seen that this company is in want of a competent Engineer-in-Chief. This is an opening worthy the attention of engineers.

SOUTHERN RAILROAD, ALA.—This road, says the New Orleans *Bulletin*, is now fairly under way, and we may look for its completion from Brandon to the Alabama line in two years. By that time the connection will be made between the Alabama line and Montgomery, which will open a continuous railroad connection from Vicksburg to the Atlantic. In the meantime the Shreveport and Vicksburg road will have been progressing rapidly in a westward direction, and will not be far from the Texas boundary. This constitutes a valuable, profitable and magnificent line of railroad communication, which is destined to contribute largely to the commercial prosperity of New Orleans.

Messrs. Cameron, Snodgrass & Co., are contractors for the entire line, from Brandon to the Alabama state line. H. Haupt, C. E. is the consulting engineer.

Mr. Snodgrass, one of the contractors, has been appointed general superintendent.

FORT WAYNE AND SOUTHERN RAILROAD.—At a recent meeting of the Directors of the Fort Wayne and Southern Railroad, held at Jeffersonville, the disagreement between the Board and the City Council of Jeffersonville, relative to the $200,000 in bonds of that city, was satisfactorily adjusted. The company take the bonds and are to sell them at not less than 80 cents. The company are not to establish their depot south of New Market street, but in the event of the construction of a bridge or a tunnel across the river they have the privilege of continuing it over the river.

Railroad Earnings.

March, 1853--4.

*Added after the table was made up.

From the foregoing table it is evident that the traffic upon the railroads of the country is rapidly increasing. The "Washington Branch," though showing a much greater amount of receipts than last month, has nevertheless fallen short of the same month last year, which decrease is readily accounted for when we remember that last year the travel of visitors, office seekers and others, over this road, to attend the inauguration of our present Chief Magistrate, was far greater than any previous similar occasion.

We find the increase of receipts for the month, over the same month of last year, to have been as follows:

1904 miles Eastern roads..... 254.87 per cent.
Or, per mile..... 13.38 "
1584 miles Western roads..... 608.53 "
Or, per mile..... 38.42 "

It is gratifying at this time, when monetary affairs are so tight, to find that our Western roads are increasing their receipts so steadily and uniformly.

Says a cotemporary, the Mobile *Register*—

"We are surprised that, with railroad statistics before men's eyes, with their wonderful results daily astonishing their senses, there should be found any at this day to throw obstacles in the way of these great fertilizing and civilizing engines of the age.

"Railroads seem to possess a magical power of creating business traffic and travel; and as the multiplication of the water rills which pour into a river swell the volume of its stream, so, the more rills of trade and travel you open to a city, the greater will be the contributions to the great reservoir of its commerce.

This has been the experience everywhere throughout the West. The effect of railroads upon our cities and towns, has been magical indeed; and we can readily conceive how those persons at the East and elsewhere, not conversant with the peculiarities of this growing country, form such erroneous opinions of its capabilities. Among a certain class, at the East especially, the constant cry is "you are building too many roads; they can never pay. We will not supply you means," and such like expressions of distrust and discouragement, and the explosion of the "railway bubble" in England a short time since, is held up to us as a warning.

It may be that more roads are proposed than will pay at first, but this, like all other business transactions, will find its proper balance. There is not at this time, a single road in operation in the West, that we know of, whose earnings are not steadily upon the increase, and the building of other main lines, so far from injuring those already in operation, will only serve to add to their traffic. The "railway bubble" of England presents not the slightest affinity to the state of railroad affairs in this country. There, shares in railroads not even surveyed, were eagerly sought after at high premiums. Such is not the case with us. There, the amount of traffic, especially freight, is comparatively limited; with us there can be no bounds put to the extent of passenger traffic, while our entire territory teems with tons upon tons of freight now lying unproductive in the soil, all of which will be rapidly developed just so soon as facilities for transportation to market can be had to draw it forth.

With these facts before us, and the figures showing that railroads do stimulate improvements, settlements, and enterprise wherever they are built; and that every mile of rail laid adds to the wealth of the country through which it passes, does it not behoove us to cherish and protect the railroad interest, the croakings of "old fogies" to the contrary, notwithstanding?

The RECORD has been taken to task for its advocacy of *Western Railroads*. It has been said that its statements were incorrect, and not sustained by facts, when it has been demonstrated by figures that Western roads do pay better, and will continue to pay better dividends than Eastern roads. Our regular monthly statements of Earnings show this thus far, and we doubt not, will continue to show it, for all time to come.

The deductions from our present table show that the increase upon Western roads has been 287.10 per cent. greater than on Eastern roads, though several of the former are quite new, and some of them yet unfinished.

ANOTHER NEW RAILROAD PROJECT.—A company has been formed and books have been opened for subscription of stock, to build a railroad from Lima, Ohio, through Marion, Kokomo and Burlington, to Lafayette. The engineers will be upon the line in about two weeks.

A reference to the map will show this to be a very direct line; but whether the country through which it is proposed to build it can raise the means, is the question upon which its fate will hinge. If the money can be raised at home, the road will go on; but if it cannot, it must of necessity be postponed, as it is impossible to raise money for new projects at this time.

We do not mean to be understood as opposing the construction of this line, which will pass through a section, as yet unoccupied, which would undoubtedly pay for a road after a time, but at present it is not advisable to bring any new projects forward, with any hope of aid from abroad.

CLEVELAND AND ST. LOUIS RAILROAD.—The Cleveland *Leader* says that this road has been put under contract (in Ohio) to Messrs. A. DeGraff, E. C. Frost & Co., of Dayton, at $24,000 per mile, including a large equipment. $100,000 worth of station buildings, and all the masonry to be constructed for double track. They are to take 65 per cent., in the stock and bonds of the company.

MINES AND MINERALS AND MANUFACTURING IN EAST TENNESSEE.

We clip the following from the Knoxville *Register* of the 12th, from which it will be readily perceived that the present course of the Legislature of the state of Tennessee, in granting aid to railroads will tend to the early development of these latent resources, and make that state one of the wealthiest and most prosperous of the Union.

Much has been said of the copper mines of Polk county, and from what we hear as daily occurring in that region, we are constrained to believe that their value has not been as yet half developed. But recently, we are told, the miners have reached the yellow sulphuret of copper, which we understand is an infallible indication of the inexhaustible extent of the mines, and also their incomparable richness. The fever which has hitherto prevailed in that quarter of East Tennessee seems not yet to have attained its highest pitch, as new discoveries are being made, new mines opened and large transactions transpiring.—But last week, we are informed, there were sales of two or three quarter sections of land at about $1,250,000. About five thousand tons of ore are now being taken from the mines monthly, and this of such richness as to be worth net one hundred dollars per ton, thus making the products of the mines even now half a million of dollars per month. What it will be when the shafts that are being sunk all penetrate the rich sulphuret, no one can conjecture, and what discoveries are yet to be made in the intervening spaces between the Polk county mines and those recently discovered in Carroll county, Virginia, "no man can know"—that the two developments are but the outcropping of the same continuous vein, which extends along our eastern border, we think there cannot be the shadow of a doubt, as the Virginia and Polk county veins have the same direction, north-east and south-west have the same dip—the same surface indications and are in the same chain of mountains. Besides this, the formation of the intervening country indicates as certainly the presence of copper beneath the surface, as do the masses of once molten matter which are to be seen where the copper has been found.

But these copper developments are not the one tenth part of the indications of the unprecedented value which is some day, and that now not very far distant, to be attached to mineral lands in East Tennessee. To say nothing of our zinc, lead, marble, &c. &c., and the immense amount of capital which we have no doubt will be some day employed in bringing these treasures out of the earth, we can point to our *mountains of iron and coal* as being of more value, ultimately, than all the copper mines of the world, no matter how productive they may be.

It is strange, indeed, that all the capital which is now being invested in mineral lands in East Tennessee, should be controlled by this copper mania. There are immense fields of coal, unsurpassed in their extent or in the quality of the coal, by any that has ever been discovered, in immediate proximity to the best iron ore in the world, and that too so abundant that we verily believe, with the fuel so near, and other facilities which may be had, together with the modern improvements in the art of making iron, the pig iron may be made at a cost of little more than *five dollars per ton.* And yet thousands of acres of land in East Tennessee, where this coal and iron so much abound, might now be purchased for less than *fifty cents per acre;* and that, too, in view of the fact that there are so soon to be radiating from Knoxville, railways to the north, south, east and west, over which the iron may be transported with profit to any market in the United States. To Charleston, for instance, the time will soon be when it may be transported for eight dollars per ton, thence to New York for two and a half dollars; to Cincinnati and Louisville for from four to five dollars; making the actual cost of the iron in New York less than $20 per ton, in Charleston less than $15, and in Cincinnati less than $10! To our distant readers, who are familiar with prices for pig iron ranging from $20 to $50, these suggestions may seem to be visionary, but they will not so think when we tell them that iron is now made in East Tennessee, after the fashion in which "our fathers" made it, and that too with *charcoal,* at $10 per ton, and that the iron men of East Tennessee have always realised good profits in the Ohio river markets, though their only access to them heretofore has been by a transportation of near *three thousand miles,* (*via* the Tennessee and Ohio rivers.) Here then is the place to "put money"—in the coal and iron lands; not that there are not large profits to be realised from a more complete development of our marble quarries, zinc and lead mines, but iron has ever been and must continue to be an article absolutely indispensable, in some form or other, to every family in this and every other land.

Cleveland & Pittsburgh, and Ohio & Pennsylvania Railroads.—The Beaver *Argus* says that a "bill has been presented to the Legislature of Pennsylvania, asking that body to transfer the rights and privileges of the Pittsburgh and Erie Railroad Company to the Ohio and Pennsylvania Railroad Company. That is, giving the right to the Ohio and Pennsylvania Railroad company to construct, if they see proper, or if the business of their road require it, that portion of the Pittsburgh and Erie road lying between Beaver and Pittsburgh. Our citizens are probably not aware of the unfairness of this move. The facts of the case, as we understand them, are briefly these: The Ohio and Pennsylvania Railroad Company wishes to monopolize the entire ground between Beaver and Pittsburgh, for the purpose of forever preventing any but their own road getting to Pittsburgh—it being impossible for a third road to be made, unless constructed for two-thirds the way in the Ohio river. What, then, will be the consequence of the passage of this bill! That portion of the Pittsburgh and Cleveland road between Wellsville and Beaver will, in all probability be abandoned. They cannot get to Pittsburgh—are at the mercy of the Ohio and Pennsylvania Company, who can carry their passengers and freight or not, as they see proper. To cross the Ohio at this point, would cost not less than a million and a half dollars; and it seems to be the determination to prevent them from going to Pittsburgh, or if they do get there, to make it cost an immense sum of money."—*Cleveland Herald.*

MATHEMATICAL INSTRUMENTS.—Such of our readers as may be in need of mathematical instruments, we would refer to E. Mendenhall's advertisement in our columns. He has a large assortment of the finest and best articles for draughting and like purposes to be found in our city, of English, French and German manufacture, and withal, he offers them at very low rates. We commend him to our friends.

LOUISVILLE AND MEMPHIS RAILROAD.—On Monday, 7th inst., the Commissioners of the Louisville and Memphis railroad met at the Merchants' Exchange, in Louisville. Stock books were distributed and the necessary steps taken for the organization of the company at an early date. We understand the best feeling prevailed at the meeting, and that the Commissioners believe that the company will be fully organized before the first Monday in June next. The deepest interest is felt in the enterprise along the line, and some stock was taken before the Commissioners met. About eighty thousand dollars has been already subscribed, one county, (Muhlenberg) having subscribed forty-six thousand dollars. No effort has yet been made in the city to obtain subscriptions, but the books are now open, and the Commissioners expect the citizens to resound liberally to the call, and they will not permit the enterprise to flag along the line by an exhibition of a want of interest here.—*Louisville Journal.*

COVINGTON AND OHIO RAILROAD.—"We understand that at the last (April) meeting of the Board of Public Works, Mr. Fisk, the engineer of the Covington and Ohio Railroad, communicated the fact that the grade of the road had been reduced to 29½ feet to the mile, thereby rendering it by far the best route for a railroad between the West and the East that can be found in the United States.

This fact, taken in connection with the experience of the Baltimore and Ohio Railroad, ought to satisfy the most skeptical that the Covington and Ohio Railroad, when built, will in a few years pay the whole cost of construction. The earnings of the Baltimore and Ohio Railroad last month, over grades of 116 feet to the mile, were $400,000. When we compare the grades of the two roads and consider the results that have been produced by the completion of one, we are irresistably compelled to the conclusion that the completion of the other would be productive of far more gratifying results."—*Richmond Enquirer.*

PEORIA AND HANNIBAL RAILROAD.—The following gentlemen have been elected officers in the Hannibal and Peoria Railroad Company:

Directors—W. R. Johnson, of Vermont; L. D. Erwin, of Rushville; J. F. Hawkins, of Hannibal; Hiram Phelps, of Lewistown; A. D. Reed, of Farmington. Hiram Phelps, President; George Phelps, of Lewistown, Treasurer; T. Hamer, of Vermont, Secretary; L. W. Ross, of Lewistown, Attorney.

The Board thus organized, went into session, and appointed Commissioners to procure the right of way. Engineers are now on the supposed route, and the whole road will be put under contract in less than three months.

☞ The Board of Aldermen of New Orleans has passed an ordinance providing for the subscription by the city of $2,000,000 stock to the New Orleans, Jackson and Great Northern Railroad. An ordinance providing for the subscription of $1,000,000 stock to the New Orleans, Opelousas and Great Western Railroad was also adopted.

PROGRESS OF IRON MANUFACTURE IN THE UNITED STATES.

We take the following from the United States *Mining Journal*, being a reply of Judge NASH, of Gallipolis, to an article which appeared in that paper, some time last month, purporting to be a reply to the Judge's article upon "Iron Manufacture" in Ohio, as it appeared in the *Record* a short time previous:

"Those who have watched the rapid development of the Iron manufacture in the Union, which is exhibited by the erection of furnaces, and by the multiplication of Iron Companies, headed by energetic and practical men, need not the hourly confirmation of our views.

So rapid is this progress, that the more prudent of the British iron-masters have refused to countenance any further advance in the prices of iron, well knowing that every shilling per ton increase in the value of this staple, is but another nail in the coffin of their monopoly.

The day has already dawned which shall emancipate us from the thraldom of bringing from Europe that metal which lies in inexhaustible masses at our doors! Already Missouri and Lake Superior iron has been shipped to Sheffield, converted into steel there, and returned to us, in cutlery of the finest quality.

Ere long, not only shall we dispense with British iron, but the superior properties of our iron will drive the Russian and Swedish steel iron from the British markets.

The following very interesting letter, from the Hon. Judge NASH, is worthy of an attentive perusal, not only on this side, but on the other side of the Atlantic:"

GALLIPOLIS, Ohio, April 11, 1854.

To the Editors of the U. S. Mining Journal.

I received a copy of your Journal of 8th March last, some weeks since, but the constant pressure of judicial duties has precluded an earlier notice of the article dated *Ironton*, Ohio, and signed "*An Iron Manufacturer.*"

The writer of that article, if I mistake not, is deeply interested in the iron manufacture, and I understand is now deriving an annual income of over $100,000 from it. Hence he is deeply interested in suppressing all information as to the true profits now being realized in the manufacture of Pig Iron; because, if known, capital will inevitably seek that investment, and production run up so as to bring down the price of iron within reasonable bounds, which is not the case at present. My object in writing the article, from which you extracted, was simply to demonstrate that there must be a large increase in the manufacture of iron in the United States; and that a large portion of that increase would take place along the line of certain railroads running through the southern portion of Ohio, and hence contribute to their business and profits. I did not undertake, therefore, to be precise in my calculations, but simply labored to show that the iron manufacture was now paying large profits, and that the cost of making it was such as to exclude in the West all fear of foreign competition. That such is the fact no well informed iron manufacturer will question.

"An Iron Manufacturer" seems to question my facts and estimates, and yet in conclusion does not vary much from my conclusions. I put down the cost of pigs at $20 per ton; he thinks the cost is $25, subject to a deduction for any profits made on the sale of merchandize. Now, since seeing his article, I have conversed with iron masters just as intelligent as this writer, and manufacturers, too, who claimed I had represented matters too favorably, but who admitted that the average cost of a ton of pig was not over $21. Now it is well known that just at this time the cost of making iron is increased above what it must be as a permanent rate. The large increase in furnaces, the great profits being realized, and the high price of provisions, have at this time raised the cost of producing iron above its usual and permanent level. I say again, that as a regular rate, $20 per ton will cover the cost of producing a ton of pig among the furnaces in Southeastern Ohio.

Now for a few facts in addition to former ones. I have seen the balance sheet of a furnace for the last year's business, showing an item of profits to the amount of $46,000.—This furnace cost six years since, less than $50,000. *Here then is a furnace paying for itself in a singte year!* Six years ago it was thought that from $2 to $6 per acre was as much as the business would justify one in paying for furnace lands; now prices averaging $13 per acre are being given for lands no richer in ore, and not as well timbered. And at these and lower prices some ten new furnaces are being erected on a line running from the northwest corner of Lawrence county along the eastern border of Jackson and Vinton counties, and up to the edge of Athens. And what is more, none are so eager to engage in these new adventures, as men already deeply involved in the business. This business is now paying greater profits than any other, *unreasonable* profits, profits however, incident to the unwise legislation of Congress. And were it not for the rise of prices of labor in Europe, the value of iron would again run down below the cost of production here; but England cannot again afford to sink prices as low as in 1850, and hence I consider the business in the West as affording a certain assurance of living profits. Whatever influence foreign importation may have upon the Eastern manufacture, the cost of inland transportation, must ever forbid the use of foreign pigs in the West. Western iron can only be effected by destroying the market for its use, through large importations of the manufacture of iron.

What then are the profits of this business? Pig iron has been selling at from $46 to $50 per ton for the last year and more. It costs, says an iron manufacturer, $25 per ton; here is a profit at the lowest of $21 per ton. A furnace will turn out from eight to ten tons per day, and some as high as twelve, giving a clear profit of from $168 to $189 per day, while in blast. According then to the admissions of "An Iron Manufacturer," what business pays as well as this! Iron, however, must go down as the production comes up gradually to the consumption; and I would not be surprised that in two years or less, the price should run down to $35 per ton; but if it even goes down to $30 per ton, it will still be, when closely managed, not a losing, but a paying business. *I submit then, whether capital can find a more inviting field for investment, whether viewed in its present or future aspects?*

I have now said enough to justify the article from which you extracted.

Yours in haste,

SIMEON NASH.

LYONS, IOWA, CENTRAL RAILROAD.

We have been kindly permitted the perusa- of several letters received by James H. Gower, Esq., of this city, from gentlemen who are prominent in the Lyons, Iowa, Central Railroad company. From statements gathered from them, we learn that the company has already expended about $200,000 in grading and bridging, and $276,000 in iron, chairs, spikes, locomotives, etc. In regard to their Bonds, $300,000 have been issued by Mr. H. P. Adams, and $500,000 more are in the hands of the Executive committee for negotiation. But as they intend publishing forthwith such an exhibit of their financial affairs as the public are justly entitled to, we shall say no more now.

The Chicago and Galena Road now owning the Dixon and Fulton line, which is to be completed this summer, will stand by the Lyons enterprise, and we have no doubt whatever, that by the time the cars shall run to Fulton, about the last of August, at least 40 miles of the road will be in running order in this state.

From the letter of Mr. H. P. Adams, from New York City, we make the following brief extract:

"Mr. Davis, our President, is here; also two of the Western Directors.

We intend to buy the iron for fifty miles of the road before we leave. I have started one locomotive on the way, and we have two others building at Patterson, N. J., to be completed in June. I shall leave for Iowa about the 12th or 15th of April; will be at Iowa City about the 1st of May. Mr. Davis and others of our party will accompany me, and go on to Fort Des Moines, etc.

Our prospects for finishing the road to Iowa City this year are good, and it will undoubtedly be done if we have no sickness on the line among the men."—*Iowa Cap. Rep.*

SAVANNAH AND GULF RAILROAD.—The Savannah *Courier* says:

We are gratified to announce, that the Board of Directors of the Savannah and Gulf Railroad company, have engaged the services of E. L. Herriot, Esq., as Chief Engineer; vice F. P. Holcombe, resigned. Mr. Herriot is now in this city and ready to enter upon his duties. A native of South Carolina, and a graduate of one of her best institutions; he has spent nearly eight years on the Georgia improvements, in the employment of Messrs. Holcombe, Foote, Reynolds and others, all of whom unite in awarding him the highest testimonials, as to both competency and attainment. As the principal surveys, on the first fifty miles of the road have already been completed, and as all the other impediments hitherto in the way of the progress of the enterprise are likely soon to be removed, we have no doubt the work will be prosecuted with energy, the moment that suitable proposals are received from contractors.

Since the above was in type, we learn that the President of this company has been authorized to make a contract with Robert Collins for grading the road from Savannah to the west bank of the Ogeechee river.

RAILROAD ACCIDENTS.

REPORT OF THE NEW YORK HERALD.

The New York *Herald* recently published a statement of accidents upon railroads and steamboats in the United States, for the past year or so, and particularizes a single road as follows:

Travelers will thank us for distinguishing the roads which have distinguished themselves by their sanguinary track. The Baltimore and Ohio road stands first on the list, with a catalogue of eleven accidents in twelve months, causing fourteen deaths and forty-six casualties.

In the same paper of the 16th inst., we find a communication from an "Officer of Baltimore and Ohio Railroad," which gives quite a different view of the matter, and no doubt a correct one. In justice to that company we copy a portion of the communication as follows:

"The alleged facts from which your inference is drawn are partly destitute of foundation and partly susceptible of explanation, which should, in my judgment, exonorate the company from the unfavorable "distinguishing" mark implied by the imputation of negligence or recklessness. The reader will observe that the majority of accidents reported occurred in the tonnage department, by which the safety of passengers was in no degree jeopardised. In those which happened to passenger trains, passengers were the sufferers only in two instances.

I proceed to examine your series:—

"March 27th, 1353, killed 8; wounded 24." At the period mentioned the community of our city and state, and I may add of the Union, were startled with surprise by the intelligence that after so many years of successful traffic and an unusual exemption from similar calamity, the first accident fatal to the life of a passenger had occurred on the Baltimore and Ohio Railroad. This melancholy disaster, which I am neither desirous to extenuate nor interested to obscure, occurred to a passenger train in descending eastwardly a grade to Cheat River, 76 miles west of Cumberland. It was attributable to a method of running the engines on the heavier grades, which has since that date been entirely abandoned. No defect in the construction of the road or of the machinery in use, no failure in sedulous attention on the part of officials employed either on the train or on the track, was ever imputed in this case by the parties most interested and best informed. It was recognized as really (in reference both to the past and to the probable future) an isolated occurrence, arising exclusively from an exceptional cause never in subsequent operation. It must of course ever remain a source of deep regret, and an additional stimulus to vigilance and caution on the part of the company; but it has not, so far at least as the local public are concerned, diminished in the minutest degree the well established confidence reposed in this corporation.

"June 25, wounded, 4."—Three persons only, all employed upon an express train, were injured on this occasion, two of them so slightly that no interruption to their daily business ensued. The third was confined for a few days by bruises. The accident was caused by running over a cow, near Thornton, Va.

"August 18, wounded 4,"—Your date, in this instance, is erroneous, the accident to which reference is probably intended, having occurred at Cameron, twenty-seven miles from Wheeling, on the 11th of August, when four passengers sustained slight injuries in consequence of a train running partially off the track. It appeared, from judicial investigation, that a switch had been unlocked by unauthorized persons and from malicious motives. Resolutions relieving the company from any imputations were passed by the passengers.

"October 7, wounded, 12."—For this report of an accident there existed no basis of fact, nor was even a rumor to that effect circulated in this city, or noticed by our local journals. But a fabricated statement, the product of a mendacious imagination, was imposed upon the Louisville *Journal*, and promptly disavowed and corrected by its editor on the representation of an officer of this company. The record should, therefore, have been accompanied by the refutation.

"November 18, killed, 2 "—The only foundation for this statement. consists in the fact that one individual, an insane man, was run over and killed on the 17th of November.

"November 23, wounded, 1."—The engineer of a tonnage train was somewhat hurt at Martinsburg.

"1854, January 23, killed, 1,"—The engineer of a passenger train was killed near Cumberland, by a collision in the night with a car maliciously taken from a switch and placed on the track.

"February 7, killed, 1."

"February 9, killed, 1."

About this time a tonnage conductor was killed, and a tonnage engineer injured, five miles west of Cameron.

"March 6, killed, 1",—The brakeman of a tonnage train was killed, in consequence of imprudence on his part, in sleeping at his post.

"March 7, wounded, 1."—The fireman of a coal train sustained some severe bruises in jumping from his stand on the engine.

The analysis of the above exhibits the following:

Accidents to passenger trains, 4; do. to tonnage trains, 5; do. to man on the track, 1. Total, 10.

Killed, 8 passengers, 3 officers and hands, 1 stranger—Total, 12.

Wounded, 25 passengers, 9 officers and hands—Total, 34.

Trusting that your sense of justice will induce you to give this due publicity,

I remain, sir, respectfully yours.

AN OFFICER B. & O. RR. CO.

CINCINNATI ABERDEEN AND OHIO RIVER RAILROAD.—A meeting of the friends of this enterprise was held at the Burnet House, in this city, on Thursday last, 20th inst., Judge J. Burgoyne, of Cincinnati, was called to the chair, and C. Baird, Esq., of Ripley was appointed Secretary.

A profile of the line of the road, with estimates, and report of the engineer, were laid before the meeting. Addresses were delivered by A. Liggett, Esq., of Ripley, H. L. Penn, Esq., of Georgetown, Judge Burgoyne, Mr. Broadwell and others. Committees were appointed to procure the right of way, and prepare an address to the puhlic. The best of feelings in favor of the proposed measure prevailed, and the meeting adjourned.

JUNCTION, INDIANA RAILROAD.

In the Connersville Times we find a communication from which we take the following items of this road:

The Junction Railroad, extending from Indianapolis by way of Rushville, Connersville, Liberty and Oxford to Hamilton, where it connects with the Cincinnati, Hamilton and Dayton Railroad, has been under contract and in process of construction for more than a year past. It was originally incorporated by the Legislature of Indiana in February, 1848. In March, 1849, the Legislature of Ohio granted the right of way to the company to extend its road to Hamilton, and granted to the company all the rights and privileges conferred by the general law of Ohio, passed in February, 1848. In February, 1853, the road was extended from Rushville to Indianapolis under the general railroad law of Indiana; and in March, 1853, the Legislature of Indiana conferred upon the company additional special privileges. The charter of this company is of the most liberal character. It is not restricted by individual liability, or any other illiberal provisions, which must destroy the value of the stock in any road organized under the new constitution of Ohio. A portion of the Junction road was put under contract in January, 1853; and at a subsequent period, the residue of the road from Indianapolis to Hamilton was placed under contract. There is now a large force upon every division of the road, and work to the amount of more than $300.000 has been done by the contractors.

The citizens of Cincinnati have taken more than six hundred thousand dollars of stock in the Junction road, a considerable portion of it in cash subscriptions; and the citizens of Indianapolis have about one hundred thousand dollars of stock in the road.

The Junction railroad from Hamilton to Indianapolis, less than one hundred miles in length, will cost, when finished in complete running order, $2,130,000. There are no tunnels, sharp curves, or high grades upon this road. Eighty-five miles between Hamilton and Indianapolis are straight lines.

The local business of the road, passing as it does through flourishing towns surrounded by a rich and highly cultivated country, cannot certainly be exceeded by any other road between Cincinnati and Indianapolis. The contract of the company with the Cincinnati, Hamilton and Dayton road, secures the conveyance of passengers and freight between Indianapolis and Cincinnati without change of cars or delay.

The whole amount of stock subscribed to the Junction Railroad is now more than two millions of dollars, of which the stock taken by the contractors, and the cash subscriptions amount to six hundred thousand dollars. The right of way has been obtained upon nearly the whole line, and the work is progressing so as to give assurance that it will be completed at an early day.

GREAT WESTERN, ILL., RAILROAD.—The cars now come into Decatur on the Great Western Railroad from Springfield. They are laying track on the Illinois Central at this place south; and the work of grading is commenced on the Indiana and Illinois Central road to Indianapolis; also on the exteusion of the Great Western Railroad to Danville, in the direction of Fort Wayne, Ia.

Comparative Cost of Wooden and Iron built Ships.

In a recently issued circular by Mr. James Hodgsdon, consulting engineer, of Liverpool, we find the following comparative annual cost of the working of a wooden and iron ship of 1,000 tons each:—"Suppose a wooden ship of 1,000 tons to cost £16,500, or £16 10s. per ton; then suppose an iron ship to cost £13,500, or £13 10s. per ton, both fitted for the East, we have the following result:—Wood—£16,500 at 3 per cent for insurance, £495; ditto at 5 per cent. for depreciation, £825; ditto at 5 per cent. for interest, £825—£2,145 deducted £1,350—795. Iron—£13,500 at 3 per cent. for insurance, £405; ditto at 2 per cent. for depreciation, £270; ditto at 5 per cent. for interest, £675—1,350; difference in favor of iron, £795 A wooden ship 1,000 tons trading to the East, will not carry more than 1,500 tons, which, at £5 per ton, for the voyage out and home, will give £7,500, while an iron ship of 1,000 tons, built from the same external lines, will carry 1,800 tons, which, at £5 per ton, will give 9,000; deduct £7,500 and the difference will be £1,500, making a total in favor of an iron ship of 1,000 tons of £2,295. In the above statement, it will be seen that I have taken the lowest estimated cost for a wooden ship, and also the lowest depreciation of the same, and as regards the iron ship, I have now under my superintendance three large ships for one gentleman, of nearly 1,500 tons each, (exclusive of others,) one of which is 2,700 tons, o. m., which will be less than £13 per ton, so that the above case is under, rather than over rated in favor of iron ships." The above estimates are especially important at this juncture, when the interest attached to iron ships is on the increase. Mr. Hodgsdon is the builder of the iron bark "Richard Cobden," which has made ten rapid voyages to the East Indies, as well as of the "Sarah Sands," the first iron screw steamer that ever ran between New York and Liverpool, and of the "Antelope," the first iron screw steamer that ran between the Brazils and Liverpool.

Oakland and Ottawa Railroad.—We learn from A. H. Hansoom, Esq., that the contracts have been entered into for the completion of this important route by the 13th of June, 1855. One year from this date the road is to be completed from Detroit to Grand Rapids.

The work is in the hands of contractors principally from New England, who are men of unquestioned ability to carry forward this great work. This route is destined to become one of the greatest thoroughfares between the East and the West.—*Milwaukee News.*

Aid to Ralroads.—Mr. Rusk's Senate bill, now pending, proposes that all railroad companies which shall contract with the United States to carry the mails and munitions of war, &c., free, and allow the Postmaster General to regulate the manner and times of transportation, shall be allowed to import free of duty all the iron required for the use of such roads; and all the double track roads which shall contract as aforesaid, shall be granted six sections of public land for each mile of said road.

BALTIMORE AND OHIO RAILROAD---STATEMENT OF REVENUE, ETC.

The following important papers were laid before the First Branch of the City Council, last evening, by J. I. Atkinson, Esq., Treasurer of the Baltimore and Ohio Railroad Company. We yesterday gave a partial abstract of the resolutions relative to a cash dividend, adopted by the Board, but the entire resolves, in connection with the accompanying statement and estimate, will command general attention.—*Baltimore American.*

Office of Balt. and Ohio R. R. Co.,
April 20, 1854.

To the President of the First Branch of the City Council:—Sir:—I have the honor to hand you herewith, an extract from the minutes of the Board of Directors of this Company, at their meeting held yesterday, accompanied by a statement of the revenue and expenses of the Baltimore and Ohio Railroad, for the six months ending the 31st of March last, and also, a statement of the estimated receipts and expenses of the coming six months, to the 1st of October next, in compliance with the request contained in the preamble and resolutions adopted by the First Branch of the City Council, on the 4th inst.

I am, sir, very respectfully,
Your obedient servant,
J. I. Atkinson, Sec'y.

Extract from the Minutes of the Board of the Baltimore and Ohio Railroad Company, April 19, 1854.

Whereas, The time has now arrived, when this Company should declare to the Stockholders what their future policy in regard to paying dividends, will be:

Resolved, That it will hereafter be the policy of this Company to declare, semi-annually, beginning on the 1st of October next, such dividends in cash as the net earnings of the road will justify, after placing to the sinking fund the amount heretofore stipulated, and reserving such surplus as the Board may deem prudent and expedient.

Resolved, That this Company are impressed with the importance of practicing a rigid economy in all its departments, and will act upon that policy; but they feel the necessity, founded upon the resolution of the City Council. the act of the Legislature, and the public expectation, of constructing the double track, heretofore spoken of, as early as it may be done, without impairing the means of the Company to accomplish other indispensable objects.

I hereby certify the above to be a true copy. J. I. Atkinson, Secretary.

Statement of the Revenue and Expenses of the Main Stem of the Baltimore and Ohio Railroad, for the year ending on the 1st April, 1854.

Gross receipts of the main stem, including dividend from the Washington Branch..		$1,774,959.11
Deduct expenses.....	$934,188 68	
Interest, ground rent, &c.....	385,401.34	1,319,590.02
Net earning, which has been used in the payment of debt contracted for machinery to earn the revenue.....		455,369.09

Estimated Revenue and Expenses for the Six Months ending 1st October, 1854.

Estimated receipts for the ensuing six months, being summer months, including Washington Branch Dividend.....		$1,530,000.00
Expenses at 60 per cent.....	$900,000.00	
Interest, ground rent, &c	385,401.34	1,285,401.34
Estimated net earnings.....		$224,598.66

Treasurer's office of the Baltimore and Ohio Railroad Company, 20th April, 1854.

J. I. Atkinson, Treasurer.

The Rabun Gap Railroad in Tennsesee. The last Knoxville *Register* says:—

"The County Court of Knox, on Monday last, by a *unanimous vote*, ordered the subscription of one hundred thousand dollars to the capital stock of the Knoxville and Charleston Railroad company. The bonds of the county are to issue to the company, are to mature in thirty years, to bear interest at the rate of six per cent per annum and are to be delivered to the company upon the application of its President."

On the same day, the *Register* states, that the County Court of Blount directed a subscription of the like amount for the same object.

The Cincinnati and Cleveland Short Line Railroad.—We learn from the Xenia *Torch-Light*, that at a recent meeting of the Board of Directors that portion of this road, extending from Xenia to Delaware, was put under contract on very favorable terms to the Company, to be finished within two years from the 1st of May next. The contractors are Messrs. Goodhue & Co., of Cincinnati, a wealthy and enterprising firm, and their contract embraces not only the entire equipment of the road, but also the erection of the necessary depot and other buildings. It is understood they will commence operations with a large force immediately.

The New Orleans and Jackson Railroad, carried in the first cotton (6 bales) to New Orleans, on the 3d. From the *Delta*, we learn that the iron is now being laid on the fifty-ninth mile from New Orleans, which leaves twenty-eight miles to complete the road to the Mississippi State line. This is greater progress than we supposed had been made in the building of the road.—*Memphis Eagle.*

ACKNOWLEDGMENTS.

Journal of Franklin Institute of Pennsylvania.—The April number of this valuable monthly came duly to hand. The contents are unusually valuable and interesting, embracing a continuation of a communication from J. C. Trautwine, C. E., upon the Inter-Oceanic Canal at the Isthmus, illustrated with cuts and maps, together with articles upon other subjects of science and the arts.

Hunt's Merchants' Magazine.—The April number of this Journal is also on our table. We find it filled with an immense amount of valuable statistical information for the merchant and others, worthy of being thus collated and preserved. We are indebted to this magazine for the high compliments its editor pays the Record in speaking of the articles copied into that journal from it.

We are indebted to the Hon. S. P. Chase for Congressional documents.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

MONETARY.

At the East, there has been more ease in the money market during the past week; the deposits in the New York City Banks have increased for the first time in many weeks; specie has also increased. These Banks now hold about $5,399,149 of United States Stocks, at par, worth a premium of 21 per cent., making a net total of about $6,000,000—all of which can be converted into gold at one day's notice, and is preferable to gold inasmuch as they are drawing interest.

Street rates for paper are getting easier, and "number one" paper goes at about 1 per cent. better than last week. Short paper of this class at 8@9 per cent., current rates 11@12. Call loans 7 per cent. are not difficult to obtain.

Exchange is firm at 109@109½. The Stock Market has improved during the past week, and the feeling that the improvement will continue seems to prevail.

Among the sales reported by A. H. Nicolay, 17th inst. we find as follows—

$5,000	Scioto and Hocking Valley R. R. Co., 1st mor. conv., 7s, 1865	$70 25
1,000	Lyons', Iowa, Cen., 1st mor. 7s, con. '73,	51 00

1,000	" do. do. do. do.	48 50
5,000	" do. do. do. do.	47 50
5,000	" do. do. do. do.	47 00
1,000	Chicago & Rock Isl'd, 1st mor. con. 7s, '70,	92 00
2,000	" do. do. do. do.	91 75
2,000	" do. do. do. do.	91 50
2,000	City of Sacramento Bonds, 10s, 1869	79 00
25	Shares Third Avenue R. R. Co	59 75

On the 20th, as follows:

$10,000	Buffalo & N Y. City R.R. 1st mor. 7s, '60,	71 50
4,000	Scioto & Hock. Val. R.R. 1st mor. 7s, '65,	69 25
10,000	" do. do. do. do.	69 00
3,000	Mansfield & Sand'y R.R. 1st mor. 7s, '60,	79 25
16,000	Lyons', Iowa, Cen. 1st mor. 7s, '73, 35 00@	53 50
1,000	Chicago & Rock Isl'd, 1st mor. 7s, 1870,	93 50
2,000	" do. do. do.	92 75
20	Shares Third Avenue R. R. Co	59 50
	One original share, Breckenridge Coal Ass'n of Ky., being the 130th of the whole property of the Company,	$9,300 00

The State of Massachusetts has granted a loan of $2,000,000, in bonds, to the Troy and Greenfield road, for the purpose of tunneling the Hoosac Mountain; the premium and exchange on these bonds will amount to $300,000 more.

The accumulation of coin at the mint in Philadelphia, on the 15th inst., reached to $23,011,284, being an increase since the 1st inst., of nearly $2,000,000.

The failure of the Cochituate Bank was not unexpected in Boston, it would seem, as its bills had been offered on hypothecation for some time previous. Receivers have been appointed to take possession of the Bank property and manage its affairs. As the bills of this Bank were sent out West, the following clause of an act of that State in 1849, may not be uninteresting:

"The holders of stock in any bank at the time when such bank shall stop payment, shall be liable, in their individual capacities, for the payment and redemption of all bills which may have been issued by such bank, and which shall remain unpaid, in proportion to the stock hey may respectively hold at the time aforesaid."

At the West, we notice a continued stringency in monetary affairs; but indications are more flattering of a gradual improvement in the market. The preseut street rates for mercantile paper, range from 2@3 per cent. per month; Railroad securities 2½@3 per cent, per month. Easteru Exchange continues firm at 1¼@1½ per cent.

So long as money can be loaned on short business paper at the present rates, Railroad enterprises must not expect to be accommodated except at ruinous shaves. The sales of Stocks in this market have been larger than last week, but is yet restricted by the tightness of the money market; the prices show somewhat of a decline, the result of the money market entirely, however. Western roads never were doing so well as now, in the way of earnings, and our advice to all holding Stock is to keep it, if possible, as it must, before long, advance in the market.

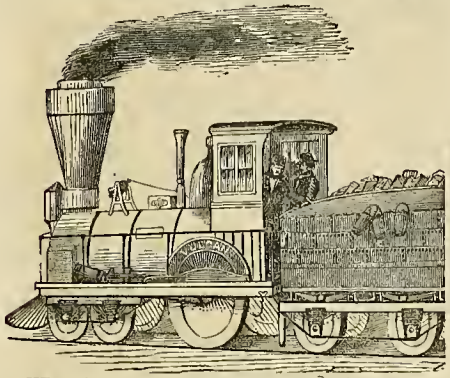
We find the following items of the STATE DEBT OF OHIO, of which $4,492,143 34 falls due January 1, 1857. The Finance Committee of the Legislature have reported a bill making appropriations as follows:

For interest 1st July, 1854, and 1st Jan., 1855		$1,960,000
For " 1st July, 1855, and 1st Jan., 1856		1,978,500

To raise these sums a tax of 1¼ mills is levied for 1854, and 1 mill for 1855; and a tax of ¾ mill for 1855, towards paying the principal. With these taxes the Committee say the debt due January, 1857, will be paid in full.

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms, apply to VOSE, PERKINS & CO.,
ap27-tf New York.



TO ENGINEERS.

THE Nashville and North-Western Railroad Company wishes to employ an Engineer-in-Chief. Early applications are solicited. Applicants are requested to furnish references and testimonials of their qualifications. JNO. A. GARDNER, Pres't,

Change of Time on Cincinnati, Hamilton, Eaton & Richmond Railroad.

ON and after TUESDAY, April 4th, 1854, the Morning Train for Richmond and Indianapolis, will leave Depot, foot of Sixth street, at 6 o'clock, A. M.

Passengers by this Train connect at Indianapolis with the I o'clock, P. M. Train on Lafayette and Indianapolis Railroad for Lafayette and Chicago; arriving at Chicago by 9 o'clock, P. M., of same day, being 9 hours less time than by any other railroad route leaving Cincinnati.

Also, connect at Indianapolis with 1.15 P. M. Train for Terre Haute.

Trains for St. Louis leave Chicago at 11 o'clock P. M., after the arrival of 1 P. M. Train from Indianapolis in the morning, making this the quickest route by far between Cincinnati and St. Louis.

Evening Train will leave as usual, at 3.30 P. M. connecting at Richmond with 7 P. M. Train for Indianapolis; arriving at Indianapolis at 10.30 P. M.

Chicago and Lafayette passengers, by this Train, sleep at Indianapolis, and resume at 6, A. M. next morning,

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights, now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co's C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft.

MEMPHIS & OHIO RAILROAD.

SEALED proposals will be received at the office of the Memphis and Ohio Railroad Company, at Memphis, Tenn., until the 15th day of April next, for the grubbing, clearing, graduation and masonry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted security for the completion of the work, at the time, and in the manner specified, and contracts will be let in sections, or for the entire work, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, should none prove satisfactory; and it is desiroable that all propositions should be submitted with the view of preparing the whole work for the iron as soon as possible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specifications may be seen at the office of the company, after the 1st of April.

mar.16-1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fido bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

NOTICE TO CONTRACTORS.

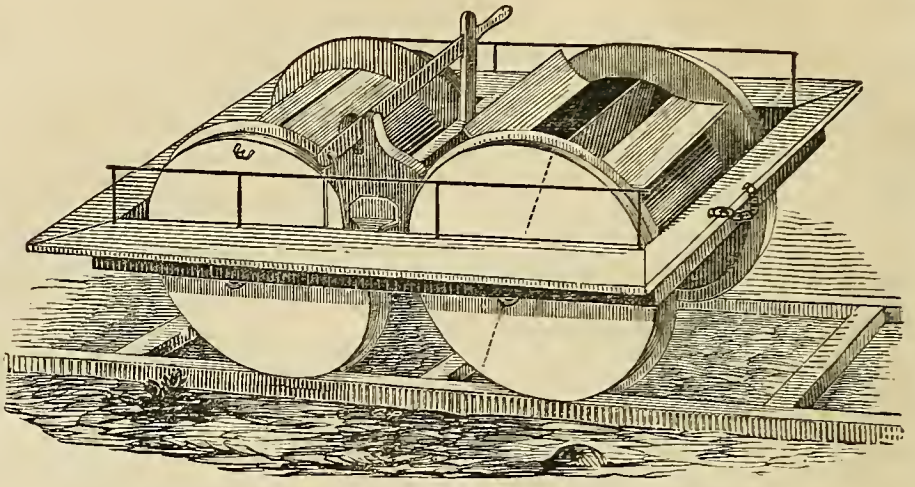
PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrensburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.



The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.

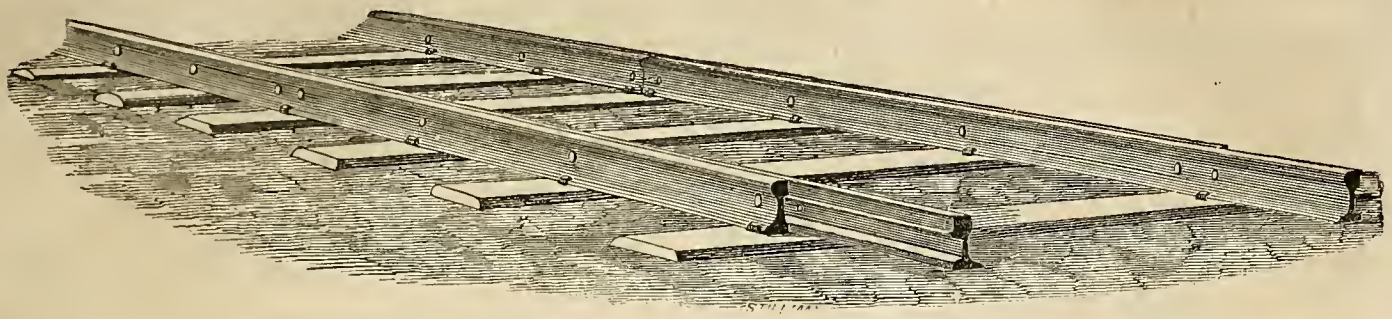
"GARDNER'S ROCK DRILL."



DESIGNED for Mining, Tunneling, Quarry Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power. A Machine is now in operation at the Crystal Palace.

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,

nov17† Trinity Building, New York.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track — it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S
PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

SIR:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION· as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville.

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,

au4tf. Muskingum Works, Zanesville, O.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture, suitable for Railroad, Turnpike, Canaling, &c., in lots, to suit purchasers. Orders filled for any reasonable amount

HENRY ROCKEY,

No. 21 East Front street

J. DAVENPORT. . . . M. D. WELLMAN. . . . C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,

Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburg, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel, or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident, that perfect satisfaction can be given in all work entrusted to our care

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States. JOSEPH DAVENPORT.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

GEO. C. EWING, 21 South Charles St., Baltimore.

MANUFACTURERS:

E. & T. FAIRBANKS & CO.,
ST. JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

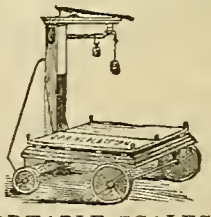
PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.



STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

THE WANT OF MONEY—ITS EFFECTS AND REMEDIES.

A great mystery has been made of one of the simplest things in the world of business, the laws of money, its natural laws we mean. Nearly all persons are searching for the mystery of money at the bottom of the well, when it's on the surface visible to all eyes. There are three very different elements constantly jumbled up by nearly all who speak on the subject, and yet are wholly different and opposite in their qualities. These are *capital*, *money*, and *functions* of money. They can all be illustrated in the case of a single individual. Suppose Peter Simpson, a man worth an hundred thousand dollars, in lands and houses, has a thousand dollars tax to pay, but has no money, (a case which has often happened,) it is plain that Peter must fail to pay if he does not borrow it. Now here is *capital* without money. Now, suppose Peter Simpson has an hundred dollars to pay each day to A, who is to pay B, who is to pay C, who is to pay D, and so on to W, who is to pay Peter Simpson an hundred dollars each day. Now Peter has an hundred dollars to begin with, but A, B, C, etc., have none. Peter Simpson pays A his hundred dollars. Now, it is very obvious, that whether Peter Simpson is able to pay A the second hundred dollars will depend altogether on the question whether the first hundred dollars has *circulated* through the hands of A, B, C, D, etc.. till it came back to Peter Simpson *in time* for his second payment. This *circulating* of money is its peculiar *function* as a medium of *exchange*. In this example we see that money may be *scarce* from any of *these* causes. Ist, it may be scarce from the want of *capital* to command it; or, 2d, it may be scarce from the want of *currency*, money proper; or 3d, it may be scarce from the want of *circulation*, or rather deficiency of exchange, or rather the *multiplication of exchange*, which results in the insufficiency of a certain sum of money to perform the required work. This, it is plain may arise from *excess of business*, as is unquestionably the present case in this country.

Supposing, for example, A, a merchant of New York, to be engaged in the importing business, he has a large capital, a solid capital, but he buys one hundred thousand dollars more goods than he has the actual money for, in expectation of selling them in time to meet

his six months' bills. He does sell them to X, Y, Z, and W, in Cincinnati, at six months time, they not having quite money enough.—X, Y, Z, and W, sell them to M, N, L, P, R, etc., country retailers. These country retailers sell them to a thousand individuals, and these individuals are depending on selling wheat, cattle, and hogs, and on the purchases of a great number of railroad hands engaged in the construction of the Tombighee railway. Now suppose the railway fails to sell its bonds, the individuals miss their calculation, and fail to pay M, N. L, etc., retailers, in time, the retailers fail to pay Messrs. X. Y, & Z, and they fail to pay Mr. A, the importer. Mr. A, as remarked, is a man of capital and raises the money by a loan, at a high rate of interest. Money becomes scarce in New York, and every body asks what is the matter? What makes money so scarce? Why, it is simply too great an *extension of business*, commonly called overtrading. But that is not all, if this overtrading should happen to be with a Foreign country, there is a balance to be paid in coin, the exportation of which, however rich a country is, *always causes a contraction of credit.* For example, since the 1st of January we have exported *sixteen millions* of dollars in specie to Europe, much more than we have done in *either of the last two years* for the same time — This is unquestionably due to overtrading.

The *cause* of the scarcity of money at present, is not the European War at all, as will be palpable from the consideration of the following facts, viz:

1. The *capital* of the country has accumulated with immense rapidity the last ten years, more rapidly than ever the last three. *Capital*, therefore is not deficient. If there are many railways making, so also the making of the railways has increased the value of property three times their cost. It is not that.

2. The *currency and coin* of the country, never were so great, relatively, or absolutely at any period of our history. The currency has been increased, in 1853, full fifty millions of dollars, and now amounts to fourteen dollars to each individual. The currency is therefore, not deficient.

3. The deficiency is really in the *functional* part of the currency, and this, again, has three or four different causes. The first and greatest is what we have illustrated above, *over-extended business.* This arises as much from the real prosperity of the country as anything. All kinds of labor and enterprise are well rewarded, and consequently everybody extends business, enters upon new undertakings, makes great improvements, and speculates in stocks. Currency has increased, but the *activity of business* has increased faster, and consequently makes the *demand* greater than the supply, great as that is. If half the business of the country were suspended, money would be abundant. But that would throw tens of thousands out of employment, and ruin thousands of families. The true principle is to keep all the *industrial* works, railways and all, in full progress, and *create capital and multiply the activity* and *functions* of money as we go along.—There are some things which may be suggested, both positive and negative, which, if not practicable just at the present moment, may come in play hereafter.

1. As to the negative, we say let no one suppose that the European War is to injure us. It can injure us in no way, except through the imagination. The Ports of the world are open to our produce, and will only need it the more for the war. If the war threatens the prosperity of Europe, there will be more aptitude to buy American securities.

2. Let no one, especially among the men called capitalists, imagine that suspending work on railways will do good. The very reverse would be the fact. It would arrest the payments through the whole line of buyers and borrowers till it arrived at New York, *where the importers and bankers would be the real losers.* The true plan, but one which requires courage, is to aid all the *railways in progress to completion.* In this way the chain of payments can be kept up, and in no other way.

3. The railways should issue their bonds in sums of $100, in which case they could be transferred in much greater quantities, and and ten times as much held by our own people, who are at last the largest holders.

4. Railway bonds in moderate amounts should be issued for *short terms*, say five years, and in small denominations, say $100. They could be redeemed out of income, and at any rate, would be payable at a better time.

5. Sooner or later, there must be a *uniformity of interest* in this country. Our present fluctuating and devious legislation on money, occasions a great deal of mischief. Some remedy should be devised for it.

6. If some financial genius would devise—what is certainly profitable and perfectly consistent with the laws of trade—a bank of settlements in each of our cities, it would be equivalent to doubling the currency without any of its dangers. Such a bank in Cincinnati, for example, would not be available for payments out of the city, but it could settle with perfect ease and safety, nine-tenths of all the daily payments of the city, without requiring one-tenth of the amount in money.—This was done by the first bank of Venice and was the origin of the modern banking system, or rather, want of system as it now exists. There are, no doubt, difficulties arising out of the complexity of banking in our cities, but it seems plain to us, that the merchants and banks of any city might if they chose, make a bank of settlements, which would command universal confidence.

7. A National bank of Exchange, without the power of circulation and discount, would be unobjectionable, and yet would save millions of expense every year in the transfer of money. At least the great rule for having plenty of money *is not to use more than you have got.*

"COVINGTON" LOCOMOTIVE—TRIP TO "BOYD'S."

It is known to our readers that the Covington and Lexington Railroad is now opened 55 miles—within 5 miles of Cynthiana, the county-seat of Harrison. At the invitation of the proprietors of the Covington Locomotive Factory, we took, on Saturday, a trip to "Boyd's," 50 miles. The occasion of the party was the first trip of the "COVINGTON,"—the first Locomotive built in Covington.

The Covington Locomotive Works have just got into operation, and are on a very large scale, calculated to do an immense business. They have gone on so quietly that few we believe, know really what has been done; most persons will be surprised by the result accomplished. The Covington Locomotive Company consists, we believe, of A. L. Greer, of Covington; D.A.Powell, of this city; Mr. Fagin, machinist for the Reading RR. Mr. Finch, and two other gentlemen, making six partners with a capital of $500,000. The works are built on the most extensive scale, the principal building being of stone, and 200 feet in length. They now employ 130 hands, and when in complete operation, can employ 700, which is equivalent to the employment and support of 3,500 persons. Mr. Fagin is the superintendent, and is an accomplished machinist When under full headway, this establishment will get out a locomotive each week, having ten constantly on hand in construction.

The "Covington" whose maiden work was begun on Saturday, is a full certificate, both in work and appearance, to the skill and success of the Covington Factory. It is a fine, strong, handsome engine.

Our trip to "Boyd's" was a very pleasant one; but at the same time, it gave us no very high idea of the resources of the Licking Valley, from Covington to Falmouth. In that distance, about 40 miles, the Valley of the Licking is little else than a deep "gulch," lying between hills without any bottoms. The most general aspect of the hills was exhibited in the beautiful wild flowers, which are now in their most charming dress, inviting the admiration of all beholders. The dogwood, the buckeye, the flox, the wild larkspur, the butter cups are all in bloom, and with the deep green of the new grass, make hill and dale most beautiful.

FALMOUTH is an older town than Covington, yet there it is with about fifty houses, looking as if it hardly averaged a new house a year. Its site, however, is quite pretty, and a fine suspension bridge is there thrown over

the Licking. By the way, Mr. Lightfoot, our host at Falmouth, furnishes a very good collation, and deserves our best thanks for his courtesy and effort to entertain his guests.—Beyond Falmouth the broad bottoms begin to appear, and a cultivation which is no where exceeded, gives evidence that we were approaching the garden of Kentucky. When that is reached the Covington Railroad will show its fruits.

CINCINNATI, LOGANSPORT, & CHICAGO RAILWAY COMPANY.

This line of road, commencing at this city and running with the Cincinnati, Hamilton and Dayton Railroad to Hamilton, is now finished to Newcastle, a distance of ninety-eight miles, and two daily trains of passengers now run over it each way. Iron for some fifty miles is at Toledo, Sandusky, New York, and New Orleans, purchased and forwarding to the line; the remainder is expected soon to arrive at New York. From a recent examination of the line to Logansport by the engineers in charge of the work, we learn that sixty-five thousand dollars will finish the entire grading, bridging, and superstructure to Logansport; that of this amount, an expenditure of ten thousand dollars will finish the grading and bridging from Newcastle to the Bellefontaine road at Anderson. That the road is finished and ties furnished ready for the iron from Logansport to Kokomo. That this part of the line could be finished and run in ninety days.

At Richmond this line meets the Indiana Central, giving a very pleasant route to Indianapolis, Lafayette, Terre Haute, &c. At Anderson it crosses the Indianapolis and Bellefontaine Railroad, and with this road will give of uniform gauge a line from this city to Indianapolis, (as that road is now of the Ohio gauge,) which would secure the freighting business from this to that city, as bulk would not have to be broken, as it now is on all finished routes to Indianapolis. At Kokomo it crosses the Peru and Indianapolis Railroad, giving a direct route to Peru and enabling the trade from this city to find access to the numerous small towns along the line from Tipton to Peru; at Logansport it meets the Logansport and Chicago, and Logansport and Pacific Railroads, the former constructing on a direct route to Chicago, and the latter running due west to Middleport, Illinois, at which point it meets the Peoria and Oquawka Road from Burlington, Iowa, on the Mississippi, which is connected with the Burlington and Missouri Railroad, now constructing from that city to the mouth of the Platte river on the Missouri under the auspices and presidency of Mr. Brooks of the Michigan Central. This line also crosses, at Logansport, the Wabash Valley running from St. Louis to Toledo, and the Logansport and Northern Indiana which is designed to connect Detroit and St. Louis, and Detroit and Evansville. At Logansport it will have roads running in five different directions that will throw a large amount of trade and travel upon it, and none rival to its legitimate business. This line has established an office in this city, on Walnut street, two doors south of the Gibson House, and we learn they are determined to push forward the work to a speedy completion, which from the report of the Engineers we think could soon be accomplished.

The direction of this line to the southwest, is most favorable in its course as a gatherer of the trade of Indiana for this city from the numerous roads it crosses or intersects, and will, in our opinion, be one of the heaviest passenger and freighting roads in the West; as it traverses the richest parts of Indiana, crossing the Wabash and Erie Canal at Logansport, and connecting the lake at Chicago, and by its connecting lines the Mississippi at Burlington with the Ohio at this city. The magnitude of this work a few years since would have startled us, which we see gradually progressing to a completion under all embarassments of the times, and will in another year form those intimate and close connections which will forever after be bound with iron. The distance on this line will be:

Cincinnati to Richmond	70 miles.		
Richmond " Newcastle	28,		98
Newcastle " Anderson	21,		119
Anderson " Kokomo	34,		153
Kokomo " Logansport	21,		174
Logansport " Chicago	102,		276
" " Burlington	253,		427

Of the entire distance in Indiana there are not over five miles of curvature, the remainder being all straight lines, one of which is seventy miles in length. The distance to Burlington by river is 966 miles from this city, which is accomplished by this route in 427 miles, and is now all under contract and constructing from Logansport west.

The resources of the counties which this road, C. L. & C., passes in the State of Indiana, are in population and in grain, etc. as follows:

	Pop.	bus Wheat.	Corn.	Oats.	Butter.
Wayne,	25,320	163,667	1,398,455	207,295	363,682
Henry,	17,605	129,303	940,042	90,685	193,543
Madison,	12,375	107,483	895,847	47,857	144,682
Tipton,	3,532	8,847	151,961	7,715	43,399
Howard,	6,657	27,930	238,853	6,063	56,107
Cass,	11,021	107,078	397,915	39,674	188,121
Total,	76,510	544,308	4,023,043	399,289	988,334

The towns are Richmond, Washington, Hagerstown, Newcastle, Middleton, Anderson, Kokomo, Galveston, Lincoln, Walton, and Logansport. The counties which are tributary and whose trade will pass over this road permanently, are

	Population.	Wheat.	Corn.	Oats.	Butter.
Delaware,	10,843	55,078	429,209	41,092	141,575
Grant,	11,092	96,961	361,318	40,868	96,476
Miami,	11,364	114,434	548,338	29,369	254,774
	33,249	266,483	1,338,865	112,429	492,825
Total,	119,759	894,791	5,361,908	512,718	1,481,159

	Value of live Stock.	Of Animals Slaughtered.
Wayne,	$646,762	$272,435
Henry,	269,244	99,053
Madison,	348,694	46,687
Tipton,	75,878	11,898
Howard,	95,214	19,637
Cass,	220,089	48,426
Miami,	229,064	58,525
Grant,	163,745	33,962
Delaware,	225,350	30,732
	$2,572,200	$581,355
		2,572,200
Totals,		$3,153,555

These statistics were taken from the census of 1850, and were of course estimated from the productions of 1849. If now taken we hazard nothing in saying they would be increased fifty per cent.; as under the influence of this and other enterprises, the country has been rapidly developing its resources, and the present value being near fifty per cent. above that of 1850, would make the aggregate value at this time double this amount. This road is of cheap construction but permanently built, having adopted the precaution of keeping their road bed high upon the flat lands. We can see no reason why its stock should not be equal to any other road entering our city when it is once completed, as its agricultural resources are such as to burthen it with freights; the population to Logansport being equal to the one ninth of the entire State of Indiana, and the direction of the road with its connections, such as to make it a first class passenger line.

TWIN CREEK RAILROAD.

This road, 21 miles in length, was organized under a charter granted in 1851, to construct a road from Carlisle, on the Cincinnati, Hamilton and Dayton road, via Germantown, to the Junction of the Greenville and Miami, and the Dayton and Western roads. The first Board of Directors was elected in April, 1853. Subsequently the line was located, making the distance 21 miles and 30 feet.

The following are the officers for 1854:—President, Wm. Gunckel; Secretary, Henry S. Gunckel; Treasurer, John Stump; Chief Engineer, G. Y. Wellington. Board of Directors:—Geo. Carlisle, Cincinnati; Herman Gebhart, Dayton; Wm. Gunckel, L. F. Scheuch, Geo. Schæffer, Henry S. Gunckel, Germantown, and Geo. Reid Pyrmont.

On the 19th of July, 1853, the Board contracted with Messrs. A. DeGraff and J. O. Shoup of this city, to furnish the iron and build the road complete, fencing it in, for $426,000, payable as follows:

In Cash,	$71,000
In Real Estate,	39,050
In Stock at par,	100,000
In 7 per cent. conv. bonds,	215,950

In January last, a supplementary contract was made, by which the Board added $35,000 in bonds to the amount originally agreed upon and the contractors bound themselves to complete the road from Carlisle to Germantown, four miles, by the first of August next, and to

the Junction by the first of January following.

The means of the company are as follows:

Stock subscribed, - - - -	$119,750
Stock to contractors, - - -	100,000
Bonds to contractors, - - - -	250,950
	$470,700

The depot buildings, water stations and right of way, are to be provided for; but the cost in addition to the ground already secured, will be small. The running machinery and cars are to be furnished by the Greenville and Miami company on reasonable terms.

RAILWAY ROLLING STOCK.

CINCINNATI MACHINE SHOPS.

Why Western railroad companies go East for their outfit, is a question that has frequently recurred to us when we have looked into the numerous Machine Shops, Locomotive Works, and Car Manufactories of our city and vicinity; and upon no occasion have we been more forcibly impressed, not with the uselessness only, but with the injustice done to our Western Mechanics, in this preference of Eastern Manufactures, than on the occasion of a recent visit to the extensive Machine Shop of Messrs. Moore & Richardson, successors of Harkness, Moore & Co., on East Front street, in our city, when under the guidance of Mr. Moore. the senior partner of the firm, we passed through the establishment and inspected the various inventions for facilitating labor in the production of Marine and Locomotive Engines.

We are indebted to the courtesy of Mr. Moore, for the following particulars of this establishment, which we give to our readers as indicative of the progress of the West in the mechanical branch of national industry.

This establishment is one of the largest of the kind in the West, covering almost an entire square of ground in the eastern portion of our city, near the river bank, and turns out Marine as well as Locomotive Engines, for which purpose there is a foundry attached capable of casting twenty tons of metal at one time, and steam hammers of a capacity for the heaviest forging. It was commenced in 1828. The present proprietors are practical men of great experience in the business, one of whom, Mr. Moore, has been in the establishment since its commencement. When full, it employs about 300 hands, and has every possible facility in the way of machinery, guided by skill, for the manufacture and repair of Engines, whether Locomotive or Marine, as well as the various kinds of machinery necessary for repair shops upon railways.

This establishment commenced the manufacture of Locomotives in 1846, since which it has turned out about 100 engines, numbers of which can be seen upon the Little Miami and Cincinnati, Hamilton & Dayton roads, which have been mostly supplied from their works, and among them is the superior passenger locomotive "NAT. WRIGHT," upon the Little Miami Railroad, which stands inferior to none made elsewhere in efficiency. Specimens of the work of this establishment can also be found upon various other roads in Ohio, as well as throughout Kentucky, Tennessee and Indiana, all of which has given ample satisfaction.

The engines of the magnificent Low Pressure Steamer, JACOB STRADER, were constructed at these works, from designs by Mr. Moore. The machinery of the low pressure steamers Northerner and Southerner was also constructed at this establishment, and in point of beauty and workmanship, efficiency or durability, will suffer no deterioration by comparison with any similar Eastern work.

There are several reasons why our railroad companies go East for machinery; the first and most potent of which is, that they can get better terms as to credit, or get a greater amount of their stock taken in payment; another cause is that the majority of engineers and superintendents upon our Western roads, are Eastern men, and come amongst us with Eastern prejudices, being unable to comprehend how machinery can be manufactured in a country where, but a short time since, the Indian roamed untrammelled in his native forests. We feel assured that a very short residence with us, will suffice to give such persons a full knowledge of the resources, and a better and more just appreciation of the skill and ability of our mechanics, thus doing away with these very natural prejudices.

The manufacture of railroad rolling stock is yet in its infancy at the West, but is advancing with rapid strides to man's estate, and will soon be in a position to supply the entire Western demand, which is greater now than the supply; it needs only the fostering care of those interested in the welfare of this section of the Union, to develop itself fully and profitably.

Mesrrs. Moore & Richardson are prepared to do all kinds of engine work, casting, forging, etc., in the very best manner, and on satisfactory terms. The facilities for shipment, in any direction from Cincinnati, are such as to make it a desirable point for purchasers.—We commend this firm to the special notice of railroad companies, steamboat men, and others in want of machinery.

THE PANAMA RAILROAD COMPANY.—By recent arrivals we learn that this company now employs nearly 5,000 laborers, and that by the middle of May the work is expected to be completed to Summit Station, leaving only 11 miles to Panama. The passengers to and fro will have the advantage of a good mule road to Panama, until the final sections of the railway are completed, and this will be about September, from the present prospects.

SAVANNAH VALLEY RAILROAD.

We have been shown the report of Mr. Arms, Chief Engineer, to the President, Mr. Hutchinson, of the results of the experimental surveys of the above road, from which we cull the following interesting facts.

The length of the experimental line from Anderson to Hamburg	93½ miles.
This can be brought down to	92 "

An increase of length over an air line of only eight miles, or nine and a half per cent.

This compares favorably with the following:

Length over a straight line of the road from Charleston to Columbia	25 per cent.
Columbia to Greenville	47 "
Columbia to Anderson	28 "
Augusta to Atlanta	25 "
Savannah to Macon	27 "

A comparison of distances shows not less favorably.

Connecting with the Rabun Gap road at Anderson, it will afford a route from Knoxville, Tenn., to Charleston, S. C., 28 miles shorter than via Greenville and Columbia roads.

From Knoxville, to Dalton and Atlanta, to Augusta, is	377 miles.
Via Anderson	286 "
Difference	91 "
Knoxville to Savannah via Atlanta	498 "
Via Anderson and Augusta	416 "
Difference in favor of Valley Route,	82 miles.

The estimated cost of the road, grading, bridging, masonry, etc.,	$799,070 00
Superstructure	757,000 00
Equipment	185,200 00
Engineering, etc	70,000 00
	$1,811,270 00

No estimate is hazarded of the business and profits to be expected from this desirable connecting link of the Southern Atlantic, with the Western States of the great valley. But they must be immense. The road will make Anderson an important depot for produce and distributing point, similar to Atlanta in Georgia. It must also greatly increase the trade and prosperity of Hamburg and Augusta. It will enhance the value of property upon the whole line, and furnish most important facilities to the planters near whom it may pass.

At a meeting of the Directors on the 19th inst., it was resolved to pay 7 per cent. interest on all instalments, to the stockholders.

This provision should secure large additional subscriptions to the road, especially from those who in the end are to be so greatly benefitted by it.—*Augusta Constitutionalist.*

NEW HAVEN AND NEW LONDON RAILWAY. The old officers have been turned out and new ones put in. The treasurer reported that the receipts of the road the past year exceeded the expenditures in the sum of $82. The following are the new officers:

M. G. Elliott, S. D. Pardee, John Bradley, Joel Tuttle, E. C. Scranton, Daniel Chadwick, Elias Perkins, C. Buckingham.

President—Matthew G. Elliott.
Secretary and Treasurer—R. D. Smith.
Superintendent—R. N. Dowd.

BUREAU VALLEY RAILROAD.—An election is to be held in Brown county, on the 27th of May, to decide whether the county will subscribe $40,000 to the capital stock of this road. The citizens of Schuyler county have subscribed $10,000 and it is proposed that county take $75,000 in stock. In Lewistown, Fulton county, $38.000 has been subscribed

Business of the South-Western Road---The Columbus and other Connections.

We learn that the affairs of the Southwestern Railroad Company are in the most flourishing condition. Its business seems to outstrip that of almost all the other roads in Georgia. The receipts for the month of March last amounted to the sum of $24,635, against $10,021 for the corresponding period of 1853. There passed over the road, from the first of August last to the first of the present month, 93,859 bales of cotton, of which amount 58,073 bales came from the Columbus end, and 35,784 from the Oglethorpe end. The *entire* receipts of cotton the past year, ending with the first of August, amounted to 38,834 bales—only a fraction over one-third of the receipts for the nine months since that time.

We learn, also, that arrangements are about being made to put light draught boats on the Chattahoochee river, to carry cotton *up* to Columbus from points below, preparatory to its shipment to Savannah.

We see daily passing in front of our office to the Central Depot, the iron rails intended for the extension of the South-western road to Americus, and also the rails and plates for the first twenty-two miles of the Mobile and Girard road commencing at Columbus. The rails for the Opelika Branch from Columbus to the Montgomery road, which were originally intended to be shipped to Mobile, have been ordered to this port, and they are expected to arrive here by the first of June.

The extension to Americus, it is believed, will be completed by the first of August next, and by that day it is expected the first twenty-two miles from Columbus, of the Mobile and Girard road will be finished. A portion of the Opelika branch will be opened by the first of October, and the whole of it by the end of the year.

The gauge of the railway tracks in Georgia, as well as of those leading westwardly from Montgomery, is five feet; while the gauge of the Montgomery and West Point road is a few inches less. The President of this last mentioned road has it in contemplation, we understand, to make the gauge of the Opelika branch conform to the established gauge in Georgia, preparatory to a similar change on the main trunk from Montgomery to West Point. We certainly hope such is his intention. The time has come for as close a connection as circumstances will allow, between all roads forming parts of one continuous line.—*Ex. Columbus, Ga.*

North Missouri Railroad.—We notice that Gov. Price, of Missouri, has refused to issue the bonds of the State in aid of this company, as authorized. The ground of the refusal is that the Directors have not located the line of the road in accordance with the requirements of the charter.

MINERAL WEALTH OF ALABAMA.

A correspondent of the Mobile Advertiser, speaking of the North-east and South-west Alabama Railroad, says :

It will aid materially in the development of the mineral resources of Alabama. The locality, extent and variety of these resources cannot be known with much accuracy, in advance of the geological survey of the State, which was wisely provided for at the late session of the Legislature. But, from the partial explorations which have been made, it may be safely assumed that coal and iron are by far the most abundant, and from their quantity, the most valuable of our mineral deposits.

The coal fields of Alabama embrace, according to several authorities, an aggregate area of over fifty-five thousand square miles. They are divided by their localities into two great sections, known as the Warrior and Cahaba valley coal fields, the former being more than twice as extensive as the latter. In each division, iron ore of a superior quality and in great abundance is found in close proximity with the coal strata. From their locality, the topography of the country and the demands of trade, the Cahaba coal fields will find their natural outlet to market in the direction of the Atlantic seaboard, and they may consequently be said to be commercially tied to Pensacola or some Atlantic port. With the Warrior coal fields the case is reversed. They are *excluded* by the same causes from Atlantic markets and find their proper outlets upon the Gulf.

Now, it is a fact familiar to the industrial economy of the age, that the value of coal and iron, as articles of commerce, depends materially on the cheapness with which they can be transported to market. The one being a bulky and the other a heavy article and each entering largely into general use only when furnished at low prices, they cannot bear the cost of haulage over dirt roads or even of carriage by ordinary water craft, except for very short distances. Hence canals and railroads are indispensible agencies for the profitable mining of coal and iron in insulated sections of country, and the construction of the former, with termini at suitable markets, leads invariably to the development of the latter. Thus it is a well-known fact that the coal and iron mines of England, and of many portions of the United States, were comparatively valueless, until outlets to market were constructed, in the former at a cost of hundreds of millions of dollars, and in the latter at an expense which, in many instances, seemed reckless until the abundant dividends resulting from the stimulated production of the articles sought to be transported, proved the wisdom and safety of the investment. But illustrative examples are entirely unnecessary to prove the point. The whole history of coal and iron mining in this country and Europe, shows that it can be profitably carried on, only in connection with cheap, safe and speedy channels of communication to market, and that where these exist by the bounty of nature or are opened by the industry of man, the business becomes at once and permanently remunerative, provided there be a sufficient supply of mineral deposits in the locality selected, and ordinary skill and prudence be employed in mining and selling them.

☞ Vose, Perkins & Co., of New York have a quantity "*Light Railroad Iron*" for sale. See Advertisement.

MAYSVILLE AND LEXINGTON RAILROAD.

A meeting of the stockholders of this company was held at Maysville on the 18th ult., and the following resolutions were adopted:

Resolved by the stockholders of the Maysville and Lexington Railroad Company, That the President and Directors of said company be and they are hereby authorized and requested to close any contract for the completion of said road which they in their discretion may deem advisable, provided the original stock is not forfeited. And it is the opinion of this meeting, that in the present embarrassed and critical condition of the enterprise, it would be greatly to the advantage of the stockholders to secure such a contract by agreeing to issue any number of company bonds necessary and to surrender the use and profits of the road for a term of years—the number of bonds and the length of the term being left to the sound discretion of the President and Directors.

Resolved, That the President and Directors together with such stockholders as may be induced to accompany them, be requested, forthwith, to visit the cities of Louisville and Lexington, and confer with the Councils of those cities, and the Boards of Directors of the Louisville and Lexington, and Lexington and Frankfort Railroad Companies, and urge upon them the importance of an endorsement of the bonds of the company to an amount not exceeding four hundred and fifty thousand dollars.

The following resolution was also unanimously adopted :

Resoleed, That the President and Directors of this company are entitled to, and that we now tender to them the thanks of the stockholders of the company, for the energy and fidelity with which they have discharged their duties towards the company; and though they have been overtaken by reverses and misfortunes beyond their control and which no human wisdom could have foreseen, and are compelled to relinquish all their heretofore reasonable plans and schemes to complete the great work with which they were charged, we still retain our confidence in their capacity, wisdom and fidelity.

The meeting then adjourned.

This course has been rendered necessary in consequence of the inability of the company to procure means to prosecute the work to completion. Consultations have been held with Messrs. Morton, Seymour & Co., heavy contractors, with a view to get them to undertake the road and complete it; the result has not yet been made known. We trust that the road may go on.

A Railroad across South America.—The Albany *Evening Journal* says, that Allan Campbell, Esq., who surveyed and superintended the construction of several railroads in South America, has been engaged to make a reconnoissance of a projected route from Mendoza, on the Eastern base of the Andes, to Montevideo, on the Atlantic. The distance is about 600 miles, and with the roads already built west of the Andes, will create a railroad communication across the South American continent, broken only by that chain of mountains. He has commenced the survey.

PACIFIC, MO., RAILROAD.

A meeting of the friends of this road was recently held at St. Louis, to devise means for continuing the progress of the work without too great a sacrifice of the securities of the company. The present condition of monetary affairs renders the selling of these securities impossible, unless at ruinous rates of discount, while the stopping of the work would entail a heavy loss upon the company, and be disastrous in its effects.

The following memorial was adopted:

To the Hon. County Court of St. Louis County:

The memorial of the undersigned, stockholders in the Pacific Railroad, respectfully represents: That, whereas, the second division of the Pacific Railroad, as appears from the reports and estimates of the Engineer, cannot be completed without the additional sum of $1,200,000 beyond the present available means of the company. And whereas the bonds of the company cannot be negotiated, as appears from the report of the Agents of the company, in time to meet the monthly estimates of the contractors, now engaged on the work; and whereas it is evident that such sum must be provided from the domestic resources of the people of St. Louis, or the work must be abandoned; and whereas the only practicable resource in the present emergency is the public wealth, to be reached by taxation, through the County Court; and whereas ample provision of law, as embodied in the General Railroad act, has furnished the necessary authority, therefore the Honorable County Court is respectfully and urgently requested to take $1,200,000 additional stock in the Pacific Railroad, to be paid by direct taxation, at a rate not exceeding 30 per cent. per annum, until the same is paid up. The tax to be levied on present stockholders in this and other companies, as upon other citizens throughout the city and county, the said stockholders hereby agreeing thereto, any provision contained in said Railroad Act to the contrary notwithstanding, and to cause to be issued in conformity with said law certificates of stock to all persons paying the tax aforesaid.

Your memorialists are of the opinion that such order of the County Court, sanctioned by the people, will enable the company to complete the road to Jefferson before the second assessment of the tax, and probably within twelve months, and that before the subsequent assessments are collected the road will be earning six per cent. or over on its cost, so that the tax payers will be enabled to dispose of their stock, if they wish, without material loss.—On the contrary, the failure of the County Court to make the order petitioned for, for aught that can now be seen, may cause a total loss of all that is now invested by the city and county.

In this view of the case, the present individual stockholders are willing to incur the the risk of increased burdens of taxatiou for the purpose contemplated in this petition, and trust that their fellow citizens throughout the county are sufficiently satisfied of the necessity of completing this work to follow their example.

And your Memorialists will ever pray, etc.

ST. LOUIS, April 14, 1854.

TERRE HAUTE AND RICHMOND RAILROAD COMPANY.—Receipts for the quarter ending March 31, 1854, $54,805,76. Receipts for corresponding quarter 1853, $39,610,48. Increase, $15,195,28.

NEW AND POWERFUL METHOD OF APPLYING BRAKES.

"The improvement consists in the application of a powerful spring to the work of turning the brakes, instead of by hand as heretofore. The spring is contained in a square box at the top of the car, from which a shaft runs down and connects with the brakes beneath. A wire chain runs along the top of all the cars, and connects with every box, so that the engineer, by pulling the end of the wire, can remove the check from every spring at the same instant, allowing the springs to operate and stop the train. The springs have to be wound up with a few turns before every operation, but this is but the work of a moment. On a trial trip, at a given signal, while a train, consisting of five cars was going at the rate of thirty-five miles an hour, the engineer sounded the whistle and put on the brakes, which, according to the watches of several gentleman, completely stopped the train in eight or nine seconds from the time the signal was given, and before the train had gone over 8 feet more than its length. Another experiment was then tried, in which the rear car was suddenly disconnected from the train by raising the coupling and unloosing the wire above. The brakeman on the last car set the spring in motion, and stopped the car so suddenly as almost to throw off several operators who were standing on its platform, while the train passed ahead. The wire chain is coupled between every car, but if a car should accidentally break loose from the rear. the jerk upon the wire would operate the brakes without further investigation, and stop all the cars.

EVANSVILLE AND CRAWFORDSVILLE RAILROAD.—We have the satisfaction of informing our readers that all the iron for this road from Vincennes to Terre Haute, has been purchased, and will be delivered at an early day, in time to have the entire road finished to Terre Haute some time during the approaching fall.

We have received from a reliable source, a full statement of the receipts of the road, for the past six months, as follows:

Receipts.	Passengers.	Freight.	Total.
1853 October	$1,340 15	$1,319 10	$2,668 25
November	1,617 80	1,606 45	3,224 25
December	1,781 35	1,751 10	2,532 45
1854 January	2,161 80	2,639 35	4,801 15
February	2,559 70	5,059 81	7,619 51
March	5,691 45	3,794 16	6,485 61
	$12,161 25	$16,169 97	$28,369 22
Mails and Express.....			565 50
			28,874 72

A very large difference is perceptible since the completion of the road to Vincennes. in the amount of receipts since January. That the stock in this road will pay well, there is no longer a question or doubt.

We take the above from the Vincennes *Gazette*, and are pleased to note this evidence of prosperity. We should be obliged to the officers of this and all other roads, for returns of receipts each month, that we may give them a place in the monthly report of Earnings, made up for the last issue of the RECORD in each month.

OHIO RAILWAY BILL.—This bill of abominations has been indefinitely postponed. A bill has passed the House making it necessary that a majority of the Directors in every railroad company shall be residents of this state.

FORT WAYNE AND SOUTHERN RAILROAD.—At a recent meeting of the directors, the grubbing, grading, masonry, etc., of fifty-two miles of this work, extending from the crossing of the Ohio and Mississippi Railroad at North Vernon, Jennings county, to Jeffersonville, was let, in sections, to highly responsible and capable contractors. The competition among bidders was great, and the work is let on quite favorable terms to the company, the aggregate amount of the contracts being $15,000 less than the engineer's estimates. The whole of the work let, embracing everything but the cross-ties and rails, is to be completed by the 1st of May, 1855. About 120 miles of this work are now under contract; the balance, 80 miles, from Muncie to Vernon, is all extremely light work, and will be put under contract in season to be completed as early as the work now let. Strong hopes are entertained that the work from Fort Wayne to Muncie will be finished and the cars running before the close of the present year.

PUBLIC LANDS.—The following are the provisions of the bill to reduce and graduate the prices of the public lands, according to the time they have been in market unsold.—The bill is now under consideration in the Senate. The lands that have been in market for ten years and upwards, to be subject to sale at the price of one dollar per acre; fifteen years or upwards, seventy-five cents per acre; and thirty years or more, twelve and a half cents per acre. It further provides that this section shall not be so construed as to extend to lands reserved to the United States, in acts granting lands to states for railroad or other internal improvements, or to mineral lands held at over one dollar and twenty-five cents per acre. The bill provides that nothing in the act shall be so construed as to interfere with any right which has or may accrue by virtue of any act granting pre-emption to actual settlers on public lands.

"BROUGH'S ROAD" connecting Terre Haute with St. Louis is of very great importance to the West. Our readers will be pleased to learn that it is "a fixed fact" beyond peradventure. We take the following dispatch, dated Ottawa, April 19th, from the Chicago *Tribune:*

To-day judgment was entered in Supreme Court in the case of the People, &c., vs. the Mississippi & Atlantic Railroad Company, affirming the judgment of the Circuit Court.—The opinion by Chief Justice Treat, holds that if any doubt existed as to the authority of the company to construct the work, ample power is given by the law of last winter, and the authority of the company is now perfect to prosecute the work of completion.

LOUISVILLE AND SANDUSKY RAILROAD.—The contract for building that portion of this road between Piqua and Huntsville, has been awarded to A. DeCraff, Esq., on quite favorable terms. The contract includes all the work ready for the cars. From Huntsville to the town of DeGraff, on the Bellefontaine road, a distance of ten miles, the line is to be completed ready for running in six months; and from DeGraff to Piqua in ten. A contract for bridging the road from Piqua to Eaton was also let to Messrs. Thatcher, Burt & Co

JEFFERSONVILLE RAILROAD COMPANY.—The report of this company for 1853, says, that the cost of the road to Edinburgh, up to Dec. 31, 1853, was $15,207 00 per mile; and including the Shelbyville and Rushville road, and machinery and cars, cost, in gross, $1,703,298 47, or $18,120 00 per mile. The gross earnings are put at $1,703,683 28. The expenses at $120,023 72. Net earnings $59,659 66.

The company now owns 94 miles of road in actual operation, and controls, by lease, 47 miles of other roads. The debt of the company unfunded amounts to $87,354 39, which will be increased somewhat by unsettled claims. This does not include the debt on bonds which amounts to $589,000 more.

THE NEW ORLEANS AND GREAT NORTHERN RAILROAD COMPANY, of which Mr. James Robb, the Banker, is President, has expended the sum of $1,736,000, and the means thus far made available amount to $1,794,000, including the bills payable of the Company, $268,000, and $480,000 in short bonds, in anticipation of city taxes. The entire subscriptions to the work amount to $6,120,000, of which $5,149,000 are yet to be availed of, due

In 1854.....	$2,801,000	In 1856.....	$375,000
In 1855.....	1,396,000	In 1857.....	577,000

The report of Mr. Robb speaks in cheerful terms of the progress of the work, though some serious financial obstructions have been encountered since the previous report.

CINCINNATI AND CHICAGO RAILROAD.—This company, formed by the consolidation of the Cincinnati, Cambridge and Chicago, and the Cincinnati, New Castle and Michigan roads, has elected the following Board of Directors:

C. B. Smith, President; R. M. Corwine, Col. Moore, Cincinnati; Martin L. Bundy, John Crum, Sol. Meredith, —— Butler, Jesse Hiatt, Wayne and Henry; T. J. Sampal, Walter March, Delaware; James Sweetser, Grant; Hugh Hannah, Wabash; G. McOut Indianapolis.

CENTRAL OHIO RAILROAD, OPENED TO CAMBRIDGE.—On Thursday, 27th ult., the line of this road was completed, and opened to Cambridge amid much rejoicing.

☞ A. R. Gilmore, Esq., Superintendent of the Chicago and Rock Island Railroad, has resigned his office, and John E. Henry, Esq., has been appointed in his place.

MONTGOMERY & WEST POINT RAILROAD, ALA.—The net earnings of this road for the year ending 1st of March last, were $80,547, or nine per cent. upon the capital stock of $892,700.

NEW MOTIVE POWER.—A correspondent of the Syracuse *Standard*, writing from Rochester, speaks of the discovery of a new motive power, which is to dispense with the present mode of steam propulsion, and is a great improvement upon all former discoveries. He says:

"It consists in the use of bi-sulphate of carbon, as a motive power. An engine has been constructed which works like a charm. The expansive force of the material, as every chemist knows, is many times greater than steam, while at the same time it requires a much less degree of heat to vaporize it. I will give you the result of an experiment with a minute steam engine. It requires the constant use of eight spirit lamps to generate heat enough, from water, to cause it to make one hundred and fifty revolutions per minute. Withdraw two of the lamps, and all motion will cease. Withdraw all of the lamps, leave them away twenty minutes, then apply the bi-sulphate of carbon, and there was heat enough remaining to propel the engine at the rate of one thousand times a minute. And this will apply on a large scale just as well. The substance being so easily evaporated, heat from twenty to one hundred and sixty degrees is found sufficient for all purposes; hence there is no danger of explosions, as with steam. It is confidently believed that this new motive power is destined to supersede the use of steam. The inventor has applied for letters patent."

PENNSYLVANIA RAILROAD BILL.—The Senate of Pennsylvania passed the bill relative to the Sunbury & Erie and Cleveland & Ashtabula Railroad (given in No. 8, Vol. 2, p.115 of the RECORD) by a vote of 18 to 11. It provides for proper arrangements for running the cars on the Lake Shore Road and protects the interests of Philadelphia and Erie.

NOTICES.

BANKS AND BANKING *in the United States. Part 2d, by Henry F. Baker.*

We understand that the author of this little work has had much experience in banking and finance. In this, and two other tracts on the same subject, he is giving to the public the results of that experience, with a view of all the law on the subject of banking, and the consequences which he thinks will flow from them.

The work is very instructive, and as the views of the author differ from many of the community, and is unfavorable to our present confused, and in many respects, wild currency, the reader will find its perusal interesting and useful. Mr. Baker thinks that the Free Banking plan, as adopted in Ohio, Indiana and Illinois, is dangerous to the community, and must ultimately be abandoned. The idea of the Free Banking system is to trust any man, no matter whom, with the power to issue bank notes, provided he *secures them by the deposite of State stocks*. To this plan there are are three objections.

1. Are State stocks a *security?*. All experience proves that State stock is even more unstable than mercantile credit. The moment there is a panic in the money market, a a real and severe pressure on the people, the very first thing to give way is State and corporate stock, for the plain reason that their owners sacrifice them to get ready money. State stocks are *not* a security, except in prosperous times; but then we want no security, for everybody is safe. But the bank is tried in hard times, and it is precisely then that State stocks fall from 20 to 50 per cent. The security of a state is no more a security than is the note of an individual.

2, As any one can bank, there is of necessity, a great deal of *inexperience* in the business, and of conrse a great deal of hazard in consequence of loose bank management.

3. As there is no restriction on the persons, or the place of their banks, many of them will be owned and managed *out of the state*, and located in *secluded places*. In fact, at this moment, several of the Indiana banks, whose paper is floating about Cincinnati, are located in little wilderness villages; several are owned by Cincinnati brokers, and more in New York. Little specie is kept at the nominal place of business, and the whole concern is a mere broker's office, issuing bank notes. The *security* is Indiana 5 per cents, which at at any moment may fall to half their nominal value. That such banks are not as safe as those established, or those established only by the security of mercantile notes, is obvious enough.

Such is the general reasoning of Mr. Baker, with our own examples. That such a system will prove entirely unavailing in a time of pecuniary disaster, we fully agree with Mr. Baker. A paper dollar is good only when it is redeemable with a coined dollar, and nothing but coin can secure it.

SILLIMAN'S JOURNAL, No. 51, Second Series, for May, 1854, is at hand. Among its contents are communications from distinguished savans, upon the various arts and sciences, giving all the recent discoveries, in Chemistry, Physics, Natural History, Mineralogy, Geology, Botany, Zoology, etc., as well as Miscellaneous intelligence upon kindred subjects.

This Journal is published every two months. Price, $5 per year, free of postage when the subscription is paid in advance.

THE WESTERN JOURNAL AND CIVILIAN, No. 6, for March, of this valuable Western periodical is at hand, completing Vol. 11 of the series. It is devoted to Agriculture, Manufactures, Statistics, Mechanic Arts, Internal Improvements, Commerce, etc., etc., and is ably edited by Messrs. Traver and H. Cobb. Published at St. Louis, $3 per annum.

This is a valuable medium for obtaining statistics of the West.

Money rates on Stock securities for the South and West, 2@2½ per cent. per month.

MONETARY.

The Money Market at the East continues stringent, with an active demand. Call loans can be had at 7 per cent. "Number one" short paper rates at 1 per cent. per month; others from 1½ to 3 per cent.

Foreign Exchange, 109⅜ to 109½.

The Stock Market is heavy and dull, with little disposition to speculate. Even State Stocks are quiet, while prices are scarcely maintained. Government Stocks are at once forwarded for redemption.

The Foreign news is rather unfavorable, though unaccompanied by any expression of distrust towards American Securities.

We take the following quotations from the sales reported by A. H. Nicolay, on the 24th ult.

At the West we have no essential change to note in Money affairs. The demand is not quite so pressing though still in advance of the supply. The rates continue the same, though number one paper is not so plenty.—Upon the whole, the tendency is to improvement. The Banks are preparing for their statements, after which they will be able to extend more facilities to their customers. Exchange still remains scarce and high. The figures this week are 1¼ @1½, against ½@¾ the same week last year.

The Legislature of Ohio has passed a "Small Bill Law" to prevent the circulation of bills of banks out of the State, of denominations less than ten dollars, which will unquestionably remain a dead letter upon our statute books, inasmuch as we have no currency of our own to supply the wants of the community, and specie, for ordinary purposes, is out of the question.

The transactions in the Stock Market have been limited, and at receding rates. They will continue depressed until money becomes more plenty.

CINCINNATI, HAMILTON & DAYTON RAILROAD.—The following named gentlemen were on the 1st. inst., re-elected Directors of this company for the ensuing year:—

S. S. L'Hommdieu, Cincinnati; John C. Wright, do.; A. M. Taylor, do.; George Carisle, do.; Samuel Fosdick, do.; Edwin B. Reeder, do.; John Woods, Hamilton; Simeon Gebhart, Dayton; Jos. B. Varnum, New York.

After the transaction of other business, the following resolutions were offered by S. Fosdick, Esq., and after being discussed were adopted:

Resolved, That in the opinion of this meeting it is desirable that the passenger depot of this road be located in this city, at a point as near as may be to the junction of Pearl and Race streets. Provided, that the same is found, upon survey, practicable, and the cost thereof is not excessive.

Resolved, That for the purpose of determining as to the expediency of this measure, the Directors procure the necessary plans and estimates for this object, and report the same to a meeting of the stockholders on the first Monday of July next, at 9 o'clock, A. M., at the office of this company.

Resolved, That the Ohio and Mississippi Railroad Company be requested to join this company in the object proposed.

The following resolution was also adopted:

Resolved, That in accordance with the recommendation made in the annual reports of the President and Superintendent, to the effect that it is the policy of this company to encourage local travel by the means of early and late trains, this meeting recommend to the Board of Directors to adopt early and efficient measures to carry out said suggestions, by placing permanently on the road early and late trains, to be varied only by the changes of the seasons.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

TYLER DAVIDSON & CO.,
Agents for the
BOSTON BELTING COMPANY.

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ½ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever. They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights, now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co's C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft.

Cross Cut Saws.—Hoe & Co.'s C. S., John Sockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet. Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz Axes, assorted Yankee and Kentucky patterns, first, second, and third quality.

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street

MEMPHIS & OHIO RAILROAD.

SEALED proposals will be received at the offiee of the Memphis and Ohio Railroad Company, at Memphis, Tenn., until the 15th day of April next, for the grubbing, clearing, graduation and masonry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted security for the eompletion of the work, at the time, and in the manner specified, and contracts will be let in sections, or for the entire work, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, should none prove satisfactory; and it is desireable that all propositions should be submitted with the view of preparing the whole work for the iron as soon as possible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specifications may be seen at the office of the company, after the 1st of April.

mar.16–1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO, Auct'rs.

☞ Stocks, Bonds and Securities received for private Sale, and to the negotiation of which particular attention will be paid. mar9-3*

NOTICE TO CONTRACTORS.

PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrensburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.

The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its udvantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track — it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S

PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil ar· perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th.—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th —The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

Sir:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION· as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

Railroad Line.

CINCIN'I, COLUMBUS & CLEVELAND ROUTE.

To New York, via Railway, in ..... 30 hours.
To N. Y., by Lake Steamers via Cleveland.. 39 "
To Pittsburgh in..... 14 "
To Boston in ..... 34½ "
To Philadelphia in ..... 38 "
To Baltimore in..... 38 "
To Wheeling in..... 18 "

VIA LITTLE MIAMI RAILWAY.

FOUR DAILY TRAINS.

First Train—Lightning Express—at ...6 o'clock, A. M.
Second Train—Accommodation Ex....7.45 " "
Third Train—Hillsborough Train.....3.10 " P. M
Fourth Train—Even'g Accommoda...5 " "

The roads of this route are laid throughout with heavy T rail.

New York, Boston, and Montreal.

First Train—Lightning Express leaves Cincinnati at 6 o'clock A. M., connecting at Cleveland with Lake Shore Railroad to Dunkirk and Buffalo; connecting at Dunkirk with New York and Erie Railroad, and at Buffalo with Buffalo and Albany Railroad to New York and Boston.

Second Train—Accommodation Express, at 7.45 o'clock, A. M., connects at Cleveland with Lake Shore Railroad to Dunkirk and Buffalo, connecting at Dunkirk with New York and Erie Railroad, at Buffalo with Buffalo and Albany and New York City Railroads, and at Buffalo with Niagara Falls Railroad, to New York, Boston, Niagara Falls, Ogdensburg, Montreal, etc.

—ALSO—

Connects at Cleveland with the new and magnificent low pressure steamers QUEEN OF THE WEST, Capt. McBride; CRESCENT CITY, Capt. Pease; connecting at Buffalo with the Buffalo and Albany, New York City, and Niagara Falls Railroads, for New York, Boston, Niagara Falls, Ogdensburg, Montreal, etc.

Fourth Train—Evening Express, at 5 o'clock P. M., connects at Cleveland with Lake Shore Railroad to Dunkirk and Buffalo, connecting at Dunkirk with New York and Erie Railroad; connecting at Buffalo with New York City, Buffalo and Albany, and Niagara Falls Railroads, to New York, Boston, and Niagara Falls.

Pittsburgh, Philadelphia, and Baltimore.

First Train—Lightning Express, leaves Cincinnati at 6 o'clock A. M., connecting at Crestline with Ohio and Pennsylvania Railroad to Pittsburgh, connecting with Pennsylvania Railroad to Philadelphia and Baltimore.

Through from Cincinnati to Philadelphia and Baltimore direct.

Zanesville, Wheeling, Baltimore, &c.

First Train—Lightning Express, at 6 o'clock A. M., and second Train, Accommodation Express, at 7.45 o'clock A. M., connect at Columbus with Central Ohio Railroad to Zanesville, connecting with Ohio Stage Co.'s Lines, via National road to Wheeling, connecting with Baltimore and Ohio Railroad to Baltimore, Philadelphia, Washington, etc.

Fourth Train — Evening Express, at 5 o'clock P. M. Passengers by this Train sleep at Columbus and resume by Morning Train, via Central Ohio Railroad to Zanesville, connecting with Ohio Stage Co.'s Line to Wheeling.

Hillsborough.

Third Train—Leaves Cincinnati at 3 P. M., connecting at Hillsborough with Ohio Stage Co.'s Lines to Chillicothe, Piketon, etc.

Cincinnati, Wilmington and Zanesville Railroad.

OPEN TO CIRCLEVILLE.—Two daily Trains, (Sundays excepted) between Washington and Cincinnati, and one daily train between Circleville and Cincinnati. On and after Tuesday, March 14th, 1854, until further notice, trains will run as follows:

Upward train for Circleville, leaves Cincinnati 7:45 A. M., and arrives at Circleville, at 2:40 P. M.

Upward train for Washington, leaves Cincinnati at 3:10 P. M., and arrives at Washington at 8:05 P. M.

Downward train leaves Circleville at 12:15 P. M., and arrives at Cincinnati at 7:45 P. M.

Downward train from Washington, leaves at 6:30 A. M., and arrives at Cincinnati at 11:25 A. M.

Trains will stop for passengers as follows: At Williamsport, Four Corners, New Holland, Washington, Rattle-Snake, Sahina, Cross Roads, Wilmington, Sligo, Clarksville and Morrow; and on the Little Miami Road at Deerfield, Butterworth's Water Station, Loveland, Miamiville, Milford and Plainville, and on proper signal by flag, or to the Conductor, at Branch Hill and Linwood, at Turnpike.

The downward Trains connect at Morrow with the Trains on the Little Miami Road for Columbus.

Lines of Omnibusses will run between Circleville, Chillicothe and Lancaster, connecting with the morning train from and evening train to Cincinnati.

Fare from Cincinnati to Washington.....$2 25
" " " " Circleville..... 3 00

For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday Septemher 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

MANUFACTURERS:

E & T. FAIRBANKS & CO.,

ST. JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & Co.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & Co.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

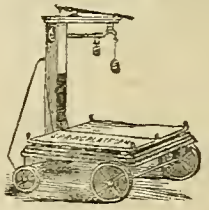
PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & Co.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.



STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & Co.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

A "RESPONSE" TO THE "EXPOSITION" OF THE CINCINNATI AND MACKINAW RAILROAD, AND ITS CONNECTION WITH THE BAY OF PENSACOLA.

A pamphlet, entitled an "*Exposition of the Cincinnati and Mackinaw Railroad,*" was published, in January, at the instance of that and the Greenville Companies. Its object was to show the importance of a railway from Cincinnati to Mackinaw,—not only in itself, but, as part of a Grand Arterial Line directly north and south, extending from an extreme point, at the junction of the Great Lakes to Pensacola, the best harbor on the Gulf of Mexico. It was proved, that *no railroad line in North America had such materials for commerce, or spanned the entire Union north and south.*

The pamphlet was prepared by E. D. Mansfield, Esq., (Editor of the *Record,*) and to him is addressed a Response, by A. H. Jones, resident engineer of the Alabama and Florida R. R. Co. The "Response" contains some additional facts, both interesting and useful. To them we shall briefly refer, especially in regard to the advantages of Pensacola as a harbor, and the directness of the sea routes through that port. On this head Mr. Jones has given much information, which we had not before. We shall avail ourselves of them to give our readers some views, in regard to the Gulf Port, which they have not previously had. In the first place, we must observe, Pensacola is *on* the Gulf, looking directly over to Cuba. In the next place, we must note that it is the deepest, and best harbor in all the South. The depth of water in the Gulf Harbors are very nearly as follows, viz :

New Orleans, (bars of the Mississippi,)	17 feet.
Mobile Bay,	21 "
Galveston,	12 "
Pensacola,	24 "

Beside this, Pensacola is one of the very best formed harbors any where to be found. For this reason, the United States Government has made it a great Naval Station, and defended it with extensive fortifications.

Next, let us note the distance and time now required to reach the Gulf, and what will be required by Pensacola :

	By New Orleans.	By Pensacola.
Distance from Cin. to the Gulf,	1600 miles,	663 miles.
Time,	168 hours,	30 hours,
Harbor,	17 feet.	24 feet.

This is the comparison in getting *to* the Gulf, and it is probable that the railway, as

connected with Pensacola will have a most decided superiority.

Now let us take the comparative distances to Foreign ports, as between a railroad to Pensacola and the *river* route to New Orleans :

	By N. Orleans.	By Pensacola.
Cincinnati to Havana,....	2000 miles.	1210 miles.
Time,.....	208 hours.	80 hours.
Cincinnati to Galveston,..	2000 miles.	1210 miles.
Time,.....	208 hours.	80 hours.
Cin. to San Francisco,....	4530 miles.	3740 miles.
Time,.....	16 days 20 hours.	11 days 12 hours.

The simple statement of these facts is enough to show that time, distance, and economy are all greatly in favor of Pensacola, as a Gulf port for the Ohio Valley. To this we may add, that it is a healthy place ; seldom or never visited by tropical epidemics.—In saying this, we would by no means disparage the prospect and resources of New Orleans ; Louisiana, and the neighboring parts of Mississippi, Arkansas, and Texas, whose entreport it is, will forever be sufficient to keep it a large and important city. But when we come to consider what sea ports and outer markets are most convenient, and accessible to the Ohio Valley, the conditions of the question are very different. The Ohio Valley is a central region, to which the whole circumference of the United States affords points of termination for its *radiating lines of Commerce*. For a long time New York was esteemed almost the only port in the North, but now the immense traffic with Philadelphia and Baltimore, indicates clearly enough that the commerce of the West seeks other outlets in the East. So New Orleans has long been the only sea port for the West in the South, but the moment railways are completed to Charleston, Savannah, and Pensacola, the produce of the Ohio Valley will be divided between these places and New Orleans. Rivers are no lunger the sole channels of trade, and it will soon be seen, that for passengers and many kinds of merchandize railways have the advantage.

From Cairo to the Gulf of Mexico, the cost of carrying a ton of freight will be no more by the Mobile and Ohio Railroad than by the steamer on the Mississippi river. If then we consider that it is 500 miles from Cincinnati to Cairo, to which is to be added the river route, we shall readily see that for all the great mass of freight intended for the Southern country, west of the Mississippi, railways must inevitably supplant the river route.

If again, we consider that between Cincinnati and the Southern Atlantic, and between the Mississippi river and the Allegheny mountains there is a vast extent of country, more than 200,000 square miles, filled with all the natural resources, which is absolutely out of the reach of steamboat navigation, (except such as the Cumberland and Tennessee casually afford,) we can also see that there will be a railway business for that country beyond the dreams of imagination. The time will come, when double tracks on the Knoxville, McMinnville, and Nashville routes will all be required, and when the Covington and Lexington Railway will be utterly inadequate to transact the business poured upon it. We know that no such results will be arrived at by any examination, or calculation based upon the comparatively sparse and unproductive region through which a large part of these railways are *now* located. But when they get through that sparsely populated region, what then ? Why they have brought the South and North together, with new and wonderful advantages for commerce, and intercourse. They have given to Cincinnati and the whole Ohio Valley new ports upon the ocean ; some the most direct to Europe, and one looking straight out on the Gulf, in a straight line to Cuba, and affording the shortest route by sea to Havanna, Tehauntepec, San Francisco, and the Pacific.

Finally, The very completion of such works will revolutionize the condition of the entire country. Mines will be worked, factories erected, farms opened, and millions of people will settle in the now secluded Switzerland of America, and the waters of the Tennessee, the Cumberland, the Kentucky, the Holston, the Hinopee, and the French Broad. The pines on the barren lands of the Floridas and the Carolinas will become more valuable than gold. The coal of the hills will burn in a thousand furnaces, The iron will be hammered in a thousand forges. The factories of Cincinnati will be multiplied to supply the wants of the fast growing multitudes of miners, and farmers. Even steamboats will be increased to carry those who come and go from its river intersection.

In fine, It is precisely the railway which is wanting to such a country, and only that to bring out its resources, to expand its growth, to increase its strength, and give that rapid and powerful development to the *interior* which we have heretofore considered as belonging only to the frontier states.

It is our purpose to develope further the idea of Southern seaports for the Ohio Valley, as the *termini* of great Railways ; and especially the fact, that they are the most direct in connection of a large part of the Ocean trade.

North Missouri Railroad.—It is said that the Directors of this road, at their meeting recently, resolved to put their road under contract from St. Louis to St. Charles, and from St. Charles to Mexico, in Audrain county. It is said that there are means to build the road thus far, and there is no serious controversy about the location south of Mexico. The bids for construction were opened then and referred to the Executive Committee.

Railroads.

PENNSYLVANIA CENTRAL RAILROAD—ANNUAL REPORT.

The annual report of the Pennsylvania Central Railroad Company, is one of the most interesting documents of the kind ever presented to the public. It discloses not only the rapid and successful progress of a great railway, but it also shows by the details of its traffic, what an immense amount of railway business is hereafter to be done over the central lines. Now, in this very beginning of its business, the Pennsylvania line shows an amount of receipts, which is almost incredible. That our readers may see not only what is done, but how the result compares with the great railway lines of New York, we give below an analysis of the elements and business of the Pennsylvania Central road. It must be observed that the State Railroad from Columbia, and the Harrisburg and Lancaster roads, are leased by the Pennsylvania Company, for which the company pay both tolls and transportation expenses. The whole taken together, however makes one entire line, whose results must be taken together. The following are the elements:

Whole length.....	357 miles
Cost of Penn. Central Railway, 251 miles	$14,000,000
Cost of the whole line.....	19,000,000
Receipts in gross.....	2,774,889
Net profits on the Penn. Cen. RR.....	1,101,268
Net per cent.....	8 per cent.

Now let us compare this result with the cost and receipts of the New York roads.

NEW YORK AND ERIE :

Length.....	464 miles.
Cost.....	$33,070,863
Gross Receipts.....	4,318,962
Net receipts.....	1,800,151
Net per cent.....	6 per cent.

NEW YORK CENTRAL:

Length.....	504 miles.
Cost.....	$33,659,423

The net receipts of the New York Central are understood to be larger than those of the Erie; but the cost of both the great New York lines is greater, in proportion, than that of the Pennsylvania line. But the extraordinary feature of the case is, that the Pennsylvania road should reach such great results, *before it was even finished*. For it will be remembered, that the Allegheny Tunnel was not opened till March. 1854. Hence, the receipts of the Pennsylvania Central line will be vastly increased in 1854; and we hazard nothing in saying that the aggregate receipts of the Pennsylvania Central Railroad, when it becomes a completely finished line, in all respects, with double tracks, will exceed those of any one line in the United States. This, no doubt, will greatly surprise many people, but will very certainly happen. But our object is to give an analysis and not an opinion.

The report is accompanied by the most ample details of business, (which we may remark, *should* be done in every railroad report,) at once interesting and instructive. We will

begin with the PASSENGER RETURNS. Here, we may remark, the report very properly distinguishes between the passengers derived from all the stations of the road itself; and also, between these and those derived from foreign stations. This last part is very valuable, for it shows at once what parts of the country may be looked to as furnishing the largest number of passengers. Thus:

Total number of passengers on the Pennsylvania Central Railroad	1,134,908
Philadelphia, to and from	82,750
Harrisburg	103,194
Hollidaysburg	62,540
Pittsburgh	177,497
New York	477
Baltimore	12,049
Cincinnati	15,643
Cleveland	10,439
Columbus	1 479
Massilon	3,476
Other places in Ohio	3,677
St. Louis	396
Indiana	440
Chicago	2,760

Most of the passengers set down at Pittsburgh, are doubtless brought there by railways from other places in the West; but confining ourselves only to those *ticketed* from places beyond, we have this result:

From Ohio	34,714
Other places, West	3,596

When the railways are opened through Marietta, on the Hempfield route, the passenger traffic from Ohio to Philadelphia, will be quadrupled, and a new revolution will take place in our Eastern traffic.

The *freight* carried was as follows, viz:

Total tons	159,632
Tons East	85,098
Tons West	74,537

The chief articles sent to and from the West, that is to and from Pittsburgh, were—

FROM PHILADELPHIA :

Boots and Shoes	5,102,305 lbs.
Coarse Goods	2,547,250 "
Dry Goods	33,070,486 "
Coffee	1,232,574 "
Drugs, Medicines and Dye-Stuffs	2,782,757 "
Hardware	4,885,946 "
Queensware, etc	1,517,487 "

TO PHILADELPHIA :

Flour	148,532 bbls.
Whisky	50,000 "
Lard, Oil and Tallow	5,292,295 lbs.
Salt Meats	21,034,944 "
Wool	2,189,109 "
Fruit	3,210,915 "

These results show that the railway to Philadelphia is already accomplishing much for the West; and when in full operation with double track, must do a good deal more.

In Ohio, the Pennsylvania Railroad has very liberally assisted several companies connected with it, viz:

Ohio and Pennsylvania Railroad	$150,000
Ohio and Indiana Railroad	300,000
Marietta and Cincinnati Railroad	750,000
Springfield and Mt. Vernon Railroad	300,000

These roads will all form connections with the Pennsylvania Railroad, thus extending its line into the heart of Ohio and Indiana.

By the Ohio & Pennsylvania and the Ohio & Indiana Railroads, an uninterrupted line will be formed from Philadelphia to Fort Wayne. By the Marietta and Cincinnati Railroad, an uninterrupted line will be formed from Philadelphia to Cincinnati. These several roads will form some of the most important highways of the nation, and will all of them be profitable investments.

MAD RIVER AND LAKE ERIE RAILROAD.

From extracts appearing in the Sandusky *Commercial Register*, we gather the following items, obtained from a recent report of the company.

The road is laid with T rail and double track, and stands with its equipments at nearly $70,000 per mile. That part of the Mad River and Lake Erie Railroad, laid with T rail and on a single track, without equipment is valued at $23,000 per mile. Adding for equipment $4000 and for second track $10,000 per mile, the comparative cost of the two roads as shown by the books, would be as 70 to 37. The New York Central divided for the nine months ending Jan. 31, 5 per cent.; the Mad River and Lake Erie Railroad, during the same months, earned over 8 per cent. on the capital stock paid in.

From the tables we learn that the cost of construction, equipment, etc., of the whole road from

Sandusky to Dayton, is	$4,424,681
Property owned by the Company	842,785
Actual assets	$5,267,466
In offset of which there is—	
Capital stock sold	$2,451,650
Bonds issued but not matured	1,719,500
Bills payable—dividends unclaimed, Coupons, Balances, etc	853,432
	$5,024,582
Excess of assets	242,884

The net earnings for 1853 were $209,197, after the payment of interest and taxes, or about 9 per cent. The following statement gives the gross income since the road was opened :

Year 1848	$269,621 83	Year 1851	$393,571 75
" 1849	343,734 85	" 1852	505,751 71
" 1850	434,961 92	" 1853	681,074 64

MEMPHIS & CHARLESTON RAILROAD—EXTENSION TO CHATTANOOGA.—Surveys have shown this contemplated road to be about 50 miles in length, the estimated cost of construction of which will be about $1,200,000. Of the length of this line, 40 miles are in Tennessee. The Legislature of that state has chartered this portion and included it among those entitled to the state aid of $10,000 per mile, and $100,000 for bridging the Tennessee at Chattanooga.

This road would pass through a region abounding in agricultural resources, and in the immediate vicinity of rich coal and iron mines, all of which would tend to make the road valuable as an investment.

At a recent meeting of the Board, the subject was strongly recommended to the stockholders for immmediate action.

RACINE & MISSISSIPPI RAILROAD, WIS.—Messrs. R. & G. S. Schuyler have undertaken the contract for building this road, including the iron and rolling stock. They are to furnish 6,500 tons of rails, eight first class locomotives, eight first class passenger cars, four baggage cars, thirty gravel cars, one hundred and twenty freight cars, the delivery of which is to be finished by the 15th of October next. They are to lay the track from Racine to Beloit. The terms are as follows: One hundred and eighty-four thousand dollars in stock and the balance in the first mortgage bonds of the company.

LOUISVILLE AND MEMPHIS RAILROAD.

We take the following from the report of the Commissioners, giving the route, etc., of the proposed line:

The entire distance from Louisville to Memphis, on this route, is 352 miles, 139 miles to the line of the state of Kentucky and Tennessee, and 184 miles thence to Memphis.

The road will start in or near to the city of Louisville, and over almost a level ridge, cross Salt River, on an adequate bridge, ¼ of a mile above its mouth; thence, upon a like ridge, in sight of the Ohio river, turn the point of the celebrated Muldrow's Hill, where natural appearances sustain the opinion that the river has forced its way through the mountain. At the base of this hill, above high water mark, the rails will be securely laid upon a rock foundation, supporting the wood and iron superstructure.

No tunnel will be required through this mountain. Leaving Muldrow's Hill at this point, the route may reach the table land to the south of it; up Otter Creek, or continue to a point, (Ditto's) 2½ miles above Brandenburg. Up these ascensions the grade will not exceed 35 and 40 feet to the mile; 40 feet is the maximum grade upon the entire route.

Upon reaching the table land, the road will take the straightest line and the shortest distance over the best ground, through the Illinois coal fields lying in Kentucky, to the town of Hopkinsville, Christian county, 150 miles; thence, observing the same requisites, 19 miles to the line of the state, to join the Memphis and Ohio road at that point.

This route has been viewed by Messrs. Lee, Livermore and Newell, experienced engineers. They report the grade not to exceed 40 feet to the mile. The curve is of a mile diameter.

The cost of the road per mile complete is $22,000; 169 to the line of the states $3,718,000 including the bridges across Salt and Green rivers, and all others on the line.

The coal and iron lie 70 miles from Louisville. Some suppose it may be reached by the line at 45 miles. But the engineers report it plenty at 65 miles from the city. The ground is highly favorable for construction.—The coal field through which the road will pass, if the coal fields be found no nearer to Louisville than 70 miles, is seventy miles long at the distance of 140 miles from this city.—The entire iron and coal field in Kentucky is estimated to be equal in quantity to that in the Iron mountain and Pilot Knob in the state of Missouri. The richness of the iron is so superior and its malleability so great, that it is suitable for horse shoes as it is cooled from the furnace. In four counties of Tennessee, thro' two of which the road will pass, an estimated capital of seventy millions is employed in the manufacture of iron. It passes through a country susceptible of a high state of improvement, the soil of which now produces all kinds of agricultural fruits; also cattle, sheep, hogs, and all sorts of live stock.

On this route no explorations for lead have been made, but its ore has been found in several places of great richness, and a lead mine is now being worked in Grayson county.

The cavernous limestone, making the whitest and purest lime in the world for all sorts of building uses, is found in abundance on this route. Muldrow's hill is composed of it.

Stone of the finest quality, the lowest sandstone of the coal series, is found on this route plentifully. Its quality, for building, is so well known that it is already sent from Kentucky to the state of Alabama for that use. It will supply Louisville, Memphis, and the entire South with abundance of the best building material, the value of which may be estimated from the fact that this stone is now brought on the New Albany and Salem Railroad, a distance one hundred miles, at the cost of $3 per ton, in Louisville, to go into the United States' Custom House, now in progress in that city. This road passes through the finest timbered country in Kentucky.—Near the route are seven saw-mills within a distance of ten miles, actively at work in preparing it for the builders' use, the demand for which, in Louisville, and all along the route, is great, and is annually increasing.

SUSPENSION BRIDGE OVER THE KENTUCKY RIVER, ON THE LEXINGTON AND DANVILLE RAILROAD.

The Lexington *Observer and Reporter*, in some of its recent issues, has had a series of communications from the pen of Julius W. Adams, upon Suspension Bridges. Number 3 of this series we give below; railroad men, as well as others, will find it very interesting:

Suspension Bridges---No. 3.

The suspension bridge now in process of construction over the Kentucky River, on the line of the Lexington and Danville Railroad, is of a single span of 1230 feet between the towers, and being some 300 feet above the bed of the stream, will form, when completed, one of the boldest specimens of engineering skill in the world; second to none with which we are acquainted. The far-famed Tubular bridge over the Straits of Menai, owes its existence to the presumed impossibility of suspension bridges being made to serve the purposes of railway traffic. As ordinarily constructed, we admit this to be the case, but no good reason exists for believing that when modified to suit this new purpose, they may not be made to fulfil all the requirements of such a structure. It is a comparatively simple problem to determine the dimensions and character of a suspension bridge which shall be acknowledged as of sufficient strength to bear any given load with absolute safety, but the difficulty has been to provide a lateral as well as a vertical stiffness to the platform, that shall obviate all danger of injury to the bridge, growing out of the incessant vibration to which it is exposed from the nature of its sustaining principle, and at the same time not to overload the cables through the means taken to confer this stiffness to the platform.—The suspension bridge over the Straits of Menai, (near the site of the Tubular bridge) although sufficiently strong for all ordinary traffic, is yet so flexible as to be constantly in motion; the slightest passing load producing waves of undulation from end to end.

If a cord, like that of a telegraph wire, be suspended between two poles, the nearer the center of the loop approaches the ground the less will be the strain of tension on the wire, but on the other hand the greater will be its undulation from a slight disturbing force.—The more tightly the cord be drawn, the greater the strain on the wire, and the less the liability to vibration. The effects of continual vibration we know to be highly injurious, and the laws which govern it are but little understood, or rather highly complicated, or difficult of investigation, hence we are led to make the deflexion of the cables as small as is consistent with the strength of the material and the load to be borne. The deflexion in the Kentucky bridge being 86 feet in a span of 1230 feet, or 114.3.

To illustrate the strength of the wire and the modification it undergoes by reason of its position in a suspension cable, we will state that a wire, such as is designed for this bridge, if of 5 miles in length, and suspended at one end from a tower of that hight, would just break by its own weight—if suspended by both ends from towers in the same curve as designed for this bridge, the towers must be three miles apart before the wire would break with its own weight; and what is true of one wire, is true of the whole cable.

The location of this bridge is peculiar in one respect, in view of the possible load it may be called upon to bear. The grade rises toward the bridge on either side at the rate of 50 feet to the mile, hence the maximum load ever brought on the bridge, will be limited by the load an engine can take up this grade. The heaviest engines used on this road will weigh 22 tons gross; and can draw on a level with all the wheel drivers, under the most favorable circumstances, some 1000 tons gross; but up a grade of 50 feet, under the same favorable circumstances, can draw no more than 283 tons. This, then, is the maximum load for the bridge, and will occupy about 300 feet of its length. We may assume that no carelessness or ignorance of freight or baggage masters can overload the bridge beyond what it is intended to bear with safety; and as to two trains being on the bridge at the same time, the police of *all* roads forbid that two trains running in the same direction, shall ever be anything like as near each other as the length of this bridge. The only precaution required to insure that this bridge shall not be unduly taxed, will be to attach a heavy penalty to doubling the trains on it. In other words, permit no train drawn by more than one engine ever to cross the bridge. This rule is too simple and plain ever to admit of misunderstanding on the part of the employees of the railroad company.

We come now to the detail of its construction. The two towers on each side are 86 feet in hight, founded on the solid rock, and built in the best manner of heavy stone, coursed, thoroughly bonded throughout, and doweled and laid in cement. The base of the towers are 24½ feet by 16½ wide, and at the top are 7½ feet by 8½. On the top of the towers a heavy cast iron bed plate is fixed, its upper surface dressed smooth to receive the wrought iron rollers which are truly turned to bear on the bed plate, and at the same time to receive through the intervention of a heavy cast iron saddle, the whole of the suspended weight of the bridge, the cables of which rest on the back of the saddle. Thus the weight is distributed uniformly over the whole of the top course. Let there be whatever change there may in the length or position of the cables by reason of a change of temperature or otherwise, no cross strain is thrown on the towers, save that resulting from the friction of the rollers, which being preserved from the action of the weather by a hood, will be reduced to the least possible. Of this hereafter.

From the saddle on either side the land cables descend at the same angle as the main cables, to their junction with the anchor chains. The latter descend for a distance of 36 feet, into pits in the solid rock, excavated to receive them. These pits are widened at the bottom, forming a shelf against which a heavy casting weighing some 6000 lbs. rests on its upper face, forming an anchor plate, through which the bars of the last link of the anchor chain pass, and are secured by a heavy pin. The links of these chains are formed of 14 flat bars, each 7½ inches wide, and 1 1-16 inches in thickness, and from 5 to 10 feet in length, the entire section of iron being 117 square inches, each link is forged from a single bloom, and the eyes for the pin bored out, that there may be no weld, through these eyes pass the wrought iron pins 4 inches in diameter, connecting the links of the chain to each other, and to the anchor plate. The whole chain and plate imbedded in cement masonry, filling the pit entirely, and excluding effectually air and moisture, so that no change need be apprehended in the strength of the iron from corrosion.

Cables.—The cables, two in number, each consists of 4604 No. 9 charcoal iron wire, which are laid by machinery traversing the chasm from side to side, laying each wire in its proper curve and to a uniform strain or tension. A center cable is first laid, the wires side by side without twist, and then six equal and similar cables dispersed around it in a circle, and the whole then wrapped closely from end to end with wire, forming, to appearance, a solid cylinder of iron 12 inches in diameter. Each wire is first coated with linseed oil, and the whole covered with paint.

If the cables were built on shore and then hung, there would be no certainty that each wire was subjected to the same degree of tension, but by making the cable in place, each wire is laid in its final position, and the desired uniformity of action secured.

Platform.—The roadway is hung to the cables at intervals of 5 feet by suspenders attached to the cables by wrought iron screw collars. The suspenders themselves being of wire rope and 1¼ iron rope according to their length. These suspenders are attached to the cross beams of the platform which occur at the same intervals of 5 feet and in pairs, each being 5 by 14 inches deep and 14½ feet in length. Framed to these cross beams, are two built girders, each 5 feet in depth, of solid timber, belted through and through. These girders run lengthwise of the bridge platform, one of them under each rail. Between each pair of cross beams, and secured to them and to the girders, are two posts 7 inches square, which meet in the center some 18 feet below the level of the rail, and at their junction are halted and bolted to two ribbons of timber running lengthwise of the bridge. To relieve the girders of strain and to give additional stiffness to the roadway, these posts have wrought iron diagonal tie rods extending from their lower ends to a distance on each side (measured on the length of the bridge) of 20 feet. These posts are also braced cross wise of the platform by iron tie rods extending from their lower ends to the outer extremity of each pair of cross beams. These double posts, deep girders, and iron tie rods, together constitute a hanging truss, 18 feet deep, so stiff that a length of 40 feet of it would sustain a weight of 20 tons without yielding.

It is this truss that we look to stiffening the roadway to such a degree, that the simple addition of underfloor cables of wire ex

tending from toward its center and at intervals toward the bottom of the cliffs, and also side stays in the plane of the roadway, will prevent any injurious undulation in either the cables or the roadway. I should have added, that to secure the proper action of these underfloor stays, (which may be increased, after the bridge is built, to any number found desirable,) there will be about 40 overfloor stays of wiro rope from the saddle of the towers to the platform. These, beside aiding in the above purpose, relieve the main cables of some of the weight of the bridge.

The strength of the bridge will be shown in our next.

JULIUS W. ADAMS.

MARIETTA AND CINCINNATI RAILROAD.

In noticing the announcement that work on the road had been suspended, and the hands discharged, and that Mr. Wilson had gone to England, the Philadelphia *North American* say :

"In answer to the above paragraph, we are glad to be able to say that we had an interview yesterday with N. L. Wilson, who has since gone to Marietta, and learned from him, what, indeed, we knew before, that the work on the Marietta and Cincinnati road is being prosecuted, and that the financial affairs of the company are in as prosperous a condition as it is possible for them to be, in the existing state of the money market. This statement will be fully confirmed by the following facts. The Marietta and Cincinnati company have just contracted on satisfactory terms, for three thousand tons of iron rails, which are to be delivered the coming summer.—This amount added to that provided for by former contracts, which are being fulfilled, makes the total quantity of rails to be supplied under present agreements, fifteen thousand tons; all of which is now in course of delivery.—Track laying will be commenced in a short time at three points, six thousand tons of rail having been delivered, and the work of grading, masonry and bridging for eighty miles of road being completed and in readiness for the iron. Upwards of one hundred miles of the line will be finished and in use by the next fall. The work is being steadily pushed forward on the hardest points of the entire route from Wheeling westward. There have been completed within a few days, and despatched via the Pennsylvania Central road, for the same company, by the Messrs. Norris & Co., of this city, four first class locomotives, called respectively, "City of Wheeling," "Marietta," "Ross County," and "Cincinnati," which make in all ten engines already furnished for the line, with an ample equipment of passenger and freight cars. About thirty miles of the road will be opened for business in a fortnight. The company have expended within the last month, in the work of construction alone, over $100,000, which has been the average outlay per month for the same purpose, during the last winter. Up to the present period about $3,000,000 have been expended in this important work."

The first passenger train on this road, ran from Chillicothe to Greenfield, and back, on Monday last, 1st inst. The road has been settled a good deal by the late heavy rains, and the train was therefore unable to make very fast time. There is a great deal of cutting and filling between these two points. About one hundred and thirty persons went on the excursion.

NIAGARA SHIP CANAL.

On page 54 vol. 2 of the RECORD we gave some particulars of this great enterprise, in which there are one or two important errors. First, there will be 21 locks, instead of 2; second, the shortest line will be 8 miles, instead of 2; and third, the cost of the shortest line will be $10,956,503, instead of $1,296,056.—These errors originated in taking the items of sections, for those of the complete work.

Our attention was called to these facts, by noticing that the books for the subscription to the capital stock of this Canal, are to be opened according to law, at Rochester, in the state of New York, on the first day of June next. The Commissioners have already given the proper notice.

When it is considered that a very large portion of the commerce of the Union, finds its way to the seaboard by this route, its immense importance must be manifest. The United States are at this time paying about five-sevenths of the tolls on the Welland Canal, in Canada, which is overtaxed and unable to do the business demanded of it. The Erie Canal is crowded to excess, and from time to time, as it is enlarged, the ratio of the business increases much faster than its increased capacity. In addition to the present railroads, there can be no doubt that before the Sunbury and Erie, or the New York and Western can be completed, the increase in the travel and freight, will far exceed the increased facilities which these additional channels will afford.—When Commissioner Ruggles, a few years ago, calculated the amount of business that would be done on the Erie Canal in 1852, according to the then ratio of increase, his official report was ridiculed, and held up to scorn throughout the state, and an entire political revolution was brought about in consequence of the supposed erroneous calculation of the Canal Board; but time has proved that even these so called extravagant expectations were much within the bounds of what has been realized in the practical working of the system, even when under the control of an opposing influence. Such is the mighty growth of the commerce of the West.

The surveys, estimates, plans, etc., have been made by competent engineers, and the work declared practicable, with every prospect of ample remuneration when in operation. This obstruction once removed, a vast amount of shipping which now confines itself to navigating the Lakes, would seek more distant ports, and lend additional impetus to trade and traffic.

We sincerely trust that the subscriptions will be rapidly filled up, and that we shall not long have to pay tribute to Canada upon produce seeking the Atlantic shores from the Lakes.

TELEGRAPH UPON RAILROADS.

We take the following from the Racine *Morning Advocate*. The instrument gives evidence of great ingenuity on the part of the inventor, to say the least of it.

Some time since we noticed an invention of a new method of working telegraph lines upon railroads by Mr. Cushman, of this city. The other day we witnessed two experiments made upon a circular railway track, got up for that purpose, the results of which were as follows :—The telegraph instruments that were upon the train were continually in the circuit so that the operator, also upon the train, could send and receive messages to and from any train or office upon the road. Whether the train was at full speed or not, it seemed to make no difference in the working of the line.

The second experiment was quite different. A portion of the conductors were removed so that the trains were only in the circuit at each station. A clock work (which we cannot describe, but which actually took the place of the operator in this case,) was then placed in one of cars, the train was started, and on coming into the circuit near the first station the clock set to running by an escapement being thrown off by the first motion of the armature. This set a wheel in motion, opening and closing the circuit with great rapidity several times, or as telegraph men would say, the " circuit-breaker " made dots, which was a signal for Mr. Cushman, who was at the home instrument, to adjust. The next instant this clock work caused the following to be written in telegraphic characters by all the instruments in the circuit; "Ex. A. S. 1." which it seems was understood to mean " Express A. at Station 1.," when this had been written the clock work stopped of itself, and on coming near the next station, started again the instant the train came into the circuit. The same thing was again sent to all the stations, except in the place of the " 1" was the figure " 2 " designating station 2. These letters and figures here made are carved upon the wheel or " circuit-breaker," as he calls it, is placed upon the clock at the begining of the road, and so adjusted as to report at each station along the road. On the return, the wheel is replaced by another, which performs the same office, in a reversed manner, for the returning train.

This invention of Mr. Cushman's is worthy of the attention of all railroad companies. It seems to possess a material advantage over all other inventions of the kind. Collisions would be prevented, as every train would be a traveling telegraph office, and could notify all other trains of their whereabouts and circumstances. Passengers on every train would always have a telegraph office at hand. We understand it is four years since Mr. Cushman demonstrated this invention by a small model.

PACIFIC RAILROAD—MR. ALLEN'S RESIGNATION.—On Saturday the Board of Directors of the Pacific Railroad met, and accepted the resignation of Thos. Allen, Esq., the late President. At the same time the Board unanimously passed a resolution approving the official conduct of Mr. Allen, throughout his administration of the affairs of the company.—This fact fully vindicates Mr. Allen, and answers the question of those who ask if Mr

Allen resigned because of any disagreement or difficulty with the Board, or because of any exceptions taken to his acts as President.—He resigns lest the opponents of the proposed special tax should make his connection with the Board a reason of hostility to it.

The Board was temporarily re-organized on Saturday by the election Mr. Hudson E. Bridge, President, and Henry L. Patterson, Vice President.

RAILROADS—THEIR EFFECTS.

The following, from the Mobile *Register*, written upon the subject of constructing a road from Mobile to New Orleans, gives a very strong argument in favor of railroads generally. It says:

"We are suprised that men should apprehend that a railway to New Orleans will be like the lion's den, with the tracks of commerce all pointing one way, and that a connection with the Crescent city will sap and carry off some of our present trade. If this argument in favor of commercial isolation is worth anything, it is equally forcible in favor of stopping up Grant's Pass, and putting a general embargo upon all trade with New Orleans.

"In all these narrow and penny-wise views of this subject—in all this guarding the spigot and leaving the bung open, gentlemen entirely lose sight of those great and unseen modes in which new railroad enterprises, in a thousand ways, universally contribute to the development and growth of the communities which are wise enough to foster them. Who would have supposed that the first section of thirty miles of the Mobile and Ohio Railroad, terminating in a pine wilderness, destitute of people and barren of productions, would do a business of $4,000 a month? Yet, it has not only done, but has itself created this business. It has stimulated improvements, settlements and enterprises all along its line; and every new mile it extends, it will increase the number of persons, acres and enterprises, that will swell the trade of this city.

"We knew a town once in a neighboring state, which had the anti-railroad mania. Its people were flourishing from a local trade of a rich geographical district around them.—They wanted to 'let well alone,' to stand still and not try new fangled experiments, which might carry away their trade. It was in vain to point out the consequences, and to tell them, while you are standing still your neighbors all over the state, are wide awake and actively moving. No matter, they didn't want a railroad within fifty miles of them. The result predicted soon happened. A road soon passed by them, on three sides, each penetrating the country whence the town drew its trade, and each carrying off the cotton bags to more enterprising communities, having cheap connections with the great markets of the world, and therefore able to pay better prices. The business of the town collapsed in an instant. Its streets were emptied of the wagons which brought the staple and carried off the goods; and it was edifying to study the countenances of the wise advocates of 'stand still,' who thought that the whole world was stupified by the drug of apathy which they had swallowed, while, with hands in their breeches pockets, they turned their eyes from their well filled stores to the empty streets. They used to say railroads would destroy the *wagon trade*. They had now found that other peoples' railroads had tolled away their wagon trade. The effect was magical. A more decided railroad town does not exist in the state. They went to work and built a road connecting with the Atlantic, without letting the grass grow under their feet. Their cotton receipts rose from 50 to 80,000 bales the first season, and now that community is projecting railroads to all points of the compass."

Bellefontaine and Indiana Railroad.—The fourth annual report of this company is at hand, from which we learn that the actual cost of the road up to this time, including appurtenances, etc., has been $2,585,769 51, or $21,913 30 per mile.

The gross earnings from July 12, 1853, to January 1, 1854, have been	$135,623 49
Running expenses	33,255 30
Profits	$102,368 19
Deduct 6 months interest on bonds	34,440 00
The length of main track is	11825 miles.
Side track, etc	671 "
	124.94 "
Of which there is compound rail	50.85 "
T rail	74.09 "
Leaves applicable to dividends	$67,928 19
Four per cent div. (mainly in stock)	67,861 77
Surplus	66 42
Capital stock, earnings used in construction, bonds, etc	$2,838,957 26
Maximum grade	39.60 feet.
Longest do	3.00 miles.
Level	20.69 "
Under 20 feet to mile	61.64 "
" 30 " "	80.79 "
Straight line	108.00 "
Curved "	10.23 "
Minimum radius	0.67 "

The length of the whole road, by a line drawn from Galion, through Bellefontaine and Sidney to Union, is but four miles over an air-line.

Galion is 595 feet above the level of Lake Erie. Union is 62.67 feet below Galion.—The difference in elevation, between the lowest depression and the highest point on the line, is 436.97 feet.

There are 14 bridges on the route, measuring 1,749.60 feet all built on Howe's Truss plan improved.

The Result of the Railroad Election. The election in New Orleans, to authorize the city of New Orleans to subscribe to the stock of the Great Northern and Great Western Railroads, resulted in a triumphant majority in favor of the proposition—the vote being over six to one. Although we have received returns from all the precincts, except the Twelfth, we find ourselves so pressed for time and space, at this late hour, as to preclude the possibility of giving more than the bare result, which is as follows:

For the New Orleans and Great Northern Railroad, 5,705; against the same, 988. For the New Orleans, Opelousas and Great Western Railroad, 5,731; against the same, 988. The returns from the Twelfth Precinct, it is supposed, will swell the vote to about 6,000.—*Daily Delta.*

Madison, Indianapolis and Peru Railroad.—The net earnings of this consolidated company for March, 1854, were $32,748 90, being an increase of about $10,000 over February last.

Knoxville and Kentucky Railroad.—From the report of M. B. Prichard, Esq., Engineer of this Company, we gather the following elements, viz:

The termini are Knoxville, in Tennessee, and Danville, in Kentucky.

The length is, in Kentucky,	85 miles.
Tennessee,	60 "
Total,	145 "

For the first sixteen miles, from Knoxville to Clinch river, the work is very heavy, more so than on any other part of the road. It will embrace a tunnel 1000 feet in length, with a viaduct and embankment 1200 feet long and 80 feet high. To preserve the maximum grade of 50 feet per mile, will entail the necessity of a second short tunnel, in preference to having earth work. From the Clinch river to Elk Gap, in the Cumberland Mountains, the line encounters no serious difficulties, the grades all being within the maximum. The summit at Elk Gap is 1640 feet above tide water. Thence to Williamsburg, Ky., the line is very straight, with light grades, and of easy construction. The Cumberland river, 300 feet wide, is crossed at this point. From the embankment a level country 300 to 350 feet higher than the river, extends some fifty miles in the direction of Danville, though frequently broken by tributary streams.

The maximum radius of curvature is 1433 feet, and used but in few places.

The estimated cost of the Kentucky portion, 85 miles is,	$2,550,378 69
Of the Tennessee portion, 60 miles is,	1,7 4,272 74
Total,	$4,284,651 43
Or, per mile, about	29,550 00
Add equipment per mile,	2,450 00
Total Cost	$32,000 00

Throughout the line of the road abundance of coal and iron is found; and when the line is completed, a direct communication with the Southern Atlantic States will then be opened from Cincinnati.

Ohio and Mississippi Railroad.—We understand that this company have disposed of their 2nd mortgage bonds on such terms as will enable them to go on to the completion of their work, with as much rapidity as is desirable. The part from Cincinnati to the Jeffersonville Railroad, will be completed probably in a month; thus forming a complete railroad between Cincinnati and Louisville, on which the time between the two cities will be reduced to six hours.

The business done on the short distance completed surpasses expectation, and leaves no room to doubt that the amount of business done on the entire road, will reach the utmost limit which has been estimated.

Notwithstanding the magnitude of this work, the difficulties which lay in its way, and the recent stringency of the money market, this enterprise will be carried through in reasonable time and to most extraordinary results.

THE LONDON FIRE BRIGADE.

A correspondent of the New York Enquirer gives an interesting history of the Fire Department in London, from which the following particulars are gathered. The present organization was established in 1833, and so perfect an arrangement, and so prompt the action, that a densely populated region, sixty miles in circumference, is protected by one hundred and nine firemen, and fifty-three engines. The value of houses, furniture and merchandise in London, subject to the ravages of fire, is estimated at upwards of four hundred and fifty-eight millions of pounds, or five times that number of dollars, and though fires are numerous, such extensive and sweeping conflagrations as desolate our larger cities, are comparatively very rare. The Superintendant of their brigade says their success in conquering the element results from their concentrated efforts to prevent its spreading into adjoining buildings, rather than from attempts to extinguish it in the houses where it has once gained the mastery—and thinks that the firemen of the United States do not realize in their eagerness to preserve a large building which cannot be saved, they expend an immense amount of energy, time and water to no purpose. The first object should be to confine the flames to the place of their origin by playing upon surrounding buildings—prevent the possibility of their spreading, and then extinguish them if possible.

The Brigade as now organized, consists of one superintendent and fourteen foremen, each being appointed to a district which he never leaves except on some pressing occasion, and who, in the absence of the superintendent, has the sole control of all engines and firemen who may come within the district.

There are seven engineers who get about $7 per week each week, and a free house—seven sub-engineers at $6 50 cents per week, thirty-two senior firemen at $6, thirty-nine junior firemen at $5, and fourteen drivers, who, with the horses to draw the engines, are hired from the cab proprietors by the year. Those men live at the several stations, are clothed by the committe, and are always ready when required. Their uniform is serviceable and plain. Only four firemen and one driver go with an engine when sent to a fire—the hose is carried on the engine, the men ride upon it and drive at a furious rate, without bells or horns, everything as if by mutual consent, making way for the Brigade. At the fire the levers are manned by the bystanders, each of those working being paid one shilling for the first, and sixpence for every succeeding hour, beside refreshments. The foreman in each district makes a minute daily report of the fires in his department, to the chief in office, these are embodied in another made by the Superintendent, and forwarded to each of the Insurance offices with which the Brigade is connected.

Each constable who discovers a fire without having his attention called to it by another, receives $2 50 from the Brigade. This causes vigilance, and upwards of four thousand men are on the watch all night for fires. The men who arrive with the first engine receive thirty shillings, the second twenty shillings, and the third ten—ten shillings are also given to the first man who turns on water.

On the Thames are floating engines for the protection of property on the wharves and docks and along the river side. The entire annual expense of the Brigade is said not to exceed $30,000.

Dayton and Michigan Railroad.—At the annual meeting of the stockholders of the D. & M. R. R. Co., held at Troy, on Thursday last, the following persons were elected Directors .

S. S. L'Hommedieu, Cincinnati; George Carlisle, do.; Thos. J. S. Smith, Dayton; Daniel Beckel, do.; Asa Mayo, Troy; James Myers, Toledo; A. J. Field, do.; Marshall Kay, Perrysburg; Jos. Cummings, Sidney.

At a meeting of the Board, the following officers *pro tem.*, were chosen: President, S. S. L'Hommedieu; Treasurer, Asa Mayo; Secretary, Roswell Giggs.

From the second exhibit of this Company, we gather the following particulars.

The road has been delayed by the iron.—Some 20 miles have been completed and run above a year, earning about $2,500 per month.

Subscriptions to the the capital stock now amount to $1,500,450, sufficient to complete the construction of the road, and furnish a large amount of rolling stock.

Messrs. Doolittle & Shoemaker have taken the contract from Troy to Toledo, to be completed, with all the machinery, rolling-stock, stations, &c., and deliver the whole by the first of June, 1855.

The estimated cost of the road, completed, and to be completed, 140 miles, is $3,020,400. Assets, bonds, sold and unsold, $3,084,450.

the Grades are as follows:

Under 5 feet per mile	84 miles.
" 21 " "	25 "
" 26 " "	8 "
Ascent going north	675 feet.
" " south,	725 "
Length of curved line is	9 miles.
Total curvature	650 degrees.
Gauge 4 feet 10 inches.	

STATEMENT OF THE PONTCHARTRAIN RAILROAD COMPANY.

Statement of Receipts and Expenditures of the Ponchartrain Railroad for the year ending November 30, 1853.

232,020 passengers, at 25c, each		$58,505 00
Freight, &c		51,742 95
		$110,247 95
Rents and mail transportation		4,500 00
		$114,747 95
Gross expenses for the year		59,427 97
Net gain		$55,319 98
Capital	$500,000. Dividend	50,000 00
Surplus		$5,319 98

P. H. GOODWIN, Secretary.

New Orleans, April 15, 1854.

Twin Creek Railroad.—We have before us the annual report of President Gunckle, which shows the work to be progressing successfully.

The Twin Creek Railroad is a short line between the Hamilton & Dayton and the Greenville and Miami Railroads. It commences at Carlisle, on the Dayton Railroad, and goes to Junction on the Greenville Railroad, making 21 miles in length. It passes up the valley of Twin Creek through Germantown, and as a short local road, is sustained by a very fertile district of country.

The work was put under contract to Messrs. DeGraff & Shoup, and is expected to be finished by the 1st of January next. The company have the means to complete the work on the terms of the contract. The distance from Cincinnati to Greenville on this route will be 86 miles, while on the Dayton route it is 97. This road becomes of great importance when considered in connection with the Cincinnati and Mackinaw line, of which it will form part.

Tennessee and Alabama Central Railroad Company.—The Commissioner's Court of Limestone County, Ala., has subscribed $200,000 to the capital stock of the Tennessee and Alabama Central Railroad Company. The Company organized on the 27th ult., by electing Dr. A. A. Burleson, President, and John T. Tanner, Secretary, pro tem. The road is to commence at Montevallo via Decatur, Athens, etc., to Nashville. Committees have been appointed to solicit stock in Limestone, Morgan, Walker and Shelby counties; and the route is soon to be surveyed.

Louisville and Nashville Railroad.—The Nashville *Banner* says, we regret to learn that orders have been received to stop all work upon this road in this State by the first of next month, (May)

We understand the Coupons of the Buffalo and New York City Railroad Bonds due on Monday May 1st, in New York were not paid, the arrangements for the funds having failed at the last moment.

ACKNOWLEDGMENTS.

We are indebted to Hon. Thos. J. Rusk for Congressional documents, being the report of the Secretary of the Treasury, in answer to the resolution of the Senate, calling for the amount of American securities held in Europe and other Foreign countries, on the 30th June, 1853.

Hunt's Merchants' Magazine.—The May number of this journal is at hand, filled with an unusual amount of valuable statistical and mercantile matter. This magazine ranks among the very best in the world, and should be in every mercantile man's hands.

MONETARY.

At the East, Money is still scarce, though discounts continue easy in the street, at rates from 10 to 15 per cent. Call loans on prime securities, are readily had at 7 per cent. Railroad paper is dull, and parties negotiating must submit to heavy discount, as there never was a time when money was so difficult to be had, except upon securities that can find purchasers at the Board at any moment. Railroad bonds or shares, not thoroughly established in the maket find dull sale.

The Stock Market has rather declined than otherwise since our last report, as will he seen by our quotations. The New York Tribune gives the following comparative table of the value of stocks, May 2d, '53 and May 2d, '54:

	1853.	1854.		1853.	1854.
Erie	90	70	Mich. South.	131	112
Reading	90¾	74¾	Panama	121	106
Hudson River.	72¼	64¼	Del. & Hud.	125	110
Harlem	56¾	49¾	Crystal Pal.	132	47
Nicaragua	33¾	25¾	Canton	31¾	25
Cumberland	50¼	28¾	Mad. & Ind.	102	65
Parker Vein	32¾	5¾	Rome & Wat.	106	93
N. Jersey Zinc	12	8¾	Erie B'ds '62.	100	86¼
Morris	23	14½	Erie B'ds '71.	98½	85¼
N. Y. Central.	125	105	Erie 2d m'rt.	103¼	93
Mich. Central.	115	105¾	Hud. 1st m'rt.	107¼	101

Foreign Exchange is dull at 109¼ @ 109¾ for best names.

The receipts for California Gold this year compare as follows with those of last year:

	1853.	1854.
January	$4,962,062	$4,201,900
February	3,548,523	2,514,000
March	7,533,752	3,982,000
April	4,766,000	3,442,000
	$20,811,237	$13,139,000

This shows a great falling off, but it is not a sign of a failure in the California supplies. Large amounts of gold are shipped to Europe in bars from the San Francisco Assay office, which do not come to the Philadelphia mint. The receipts of California Gold this year continue to be much larger than the exports of specie.

Money Matters at the West remain unchanged since our last quotations. The supply in hands of Banks and Banking houses is small, and inadequate to the demand. Out of doors the supply is more abundant but is absorbed by railroad wants, at rates from 2 to 3 per cent. per month

The rates of Exchange continue high, and the pressure upon the country banks for coin and drafts, remains as active as heretofore, causing them to contract their business to meet emergencies.

Business paper rates at 1@2 per cent. per month. Exchange remains at our last quotations.

Cincinnati, Logansport & Chicago Railroad.

TO CHICAGO IN 15 HOURS.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

TYLER DAVIDSON & CO.,
Agents for the
BOSTON BELTING COMPANY.

India Rubber Machine Belting in any quantity, from 2 to 20 inches.
India Rubber Steam Packing;

Mixed	do	do	1-32 to ½ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and possessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.
2d, They are a great deal cheaper.
3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the LOWEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights, now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Monsehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft.

Cross Cut Saws.—Hoe & Co.'s C. S., John ockcrell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet. Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street

OF ALL KINDS SOLD LOW BY

MOORE, ANDERSON, WILSTACH & KEYS,

Corner of Main and Fourth Streets,

CINCINNATI. jan12-†

MEMPHIS & OHIO RAILROAD.

SEALED proposals will be received at the office of the Memphis and Ohio Railroad Company, at Memphis, Tenn., until the 15th day of April next, for the grubbing, clearing, graduation and masonry of the first 65 miles, from Memphis to Cherryville.

Contractors must give the most undoubted security for the completion of the work, at the time, and in the manner specified, and contracts will be let in sections, or for the entire work, as may be deemed best by the director.

The directory reserve the right of rejecting all bids, should none prove satisfactory; and it is desireable that all propositions should be submitted with the view of preparing the whole work for the iron as soon as possible. Bids of that character and otherwise equally favorable, will have preference.

Maps plans, and specifications may be seen at the office of the company, after the 1st of April.

mar.16-1† E. PEABODY, Eng. in charge.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.

OFFICE—No. 2 Pine street, cor. of Broadway,

NEW YORK, } Metropolitan Bank Buildings.

March 1st, 1854.}

☞ Stocks, Bonds and Securities received for private Sale, and to the negotiation of which particular attention will be paid. mar9-3*

NOTICE TO CONTRACTORS.

PACIFIC R.R. OF MISSOURI, 3d and 4th DIVISIONS.

IT is intended to make contract for the 2d and 4th divisions of this road, extending from the Missouri river at Jefferson City, passing near Georgetown and Warrenburgh, to the Missouri river, near Independence, about 160 miles, so soon after the first of May next as satisfactory proposals shall be made.

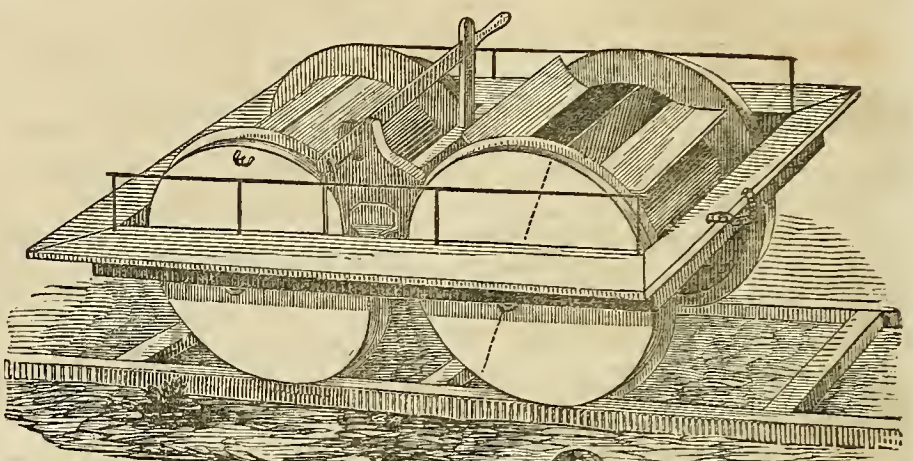
Contract will be made for the whole now offered, or such parts as particular contractors may select in form and quantity to suit the interests of the Company. Proposals are asked for by the cubic yard, with cash payments; but contractors may if they desire, accompany their offer with proposals for two-thirds cash, and one-third in county and railroad mortage bonds or other securities.

Profiles of maps of approximate location can be seen after the 1st of April next at Pacific Railroad Office, in St. Louis, and any information will be given on application to the Engineer.

The first division of this road is now in operation; the second division to Jefferson City under present course of construction.

The third and fourth divisions now offered pass over a high, rolling mixed prairie and timbered country, and for healthfulness and supply of provisions will compare favorably with any part of the West.

THOS. ALLEN, President.



THOS. S. O'SULLIVAN, Chief Engineer.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S PATENT AXLE BOXES FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

SIR:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION· as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

MANUFACTURERS:

E & T. FAIRBANKS & CO.,

ST. JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.,
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

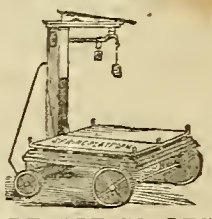
PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.



STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

PROGRESS OF OHIO RAILWAYS.

Last year we gave a statement of the Ohio Railways then completed. As it is well to know, even in one state, the actual addition of railways at this time, we shall give a bird's-eye view of those in Ohio, with some of the most important elements and results.

1. COMPLETED RAILROADS IN WHOLE OR PART.

	Miles.
Cincinnati, Columbus, and Cleveland Line	253
Cincinnati, Dayton and Sandusky,	213
Cincinnati, Wilmington and Zanesville, (part)	90
Cincinnati and Hillsborough,	37
Cincinnati and St. Louis, (part,)	20
Eaton and Richmond,	41
Dayton and Western	36
Greenville and Miami	46
Dayton and Michigan, (part)	20
Bellefontaine and Indiana	118
Springfield and Columbus,	19
Columbus, Piqua and Indiana,	102
Columbus and Wheeling line, (part)	86
Sandusky, Mansfield and Newark	117
Scioto and Hocking Valley, (part)	45
Iron Road,	13
Cleveland and Toledo line,	147½
Cleveland and Erie,	70
Cleveland and Pittsburg,	99
Cleveland and Zanesville,	14
Ohio and Pennsylvania,	143
Ohio and Indiana, (part)	38
Springfield, Mt. V. & P	45
Find a Branch of Mad River,	15
Steubenville and Indiana,	20
Completed,	1,707½

Of this aggregate, 357 miles have been opened since the first of November last, about six months. Of all these lines, about 500 miles remain to be completed, in order to reach the *ultimate termini*. All of them have the ability to go on with their several works till finished. This will make what may be called 2,200 miles of completed railway, independent of double tracks. Three or four of these roads are now engaged in making double tracks, as a matter of indispensable necessity to their growing business.

2. OF THE RAILWAYS IN PROGRESS.

The following are the most important :

Cincinnati and Marietta, 260 miles. This work has about 70 miles graded, and nearly all the route much worked upon. From Chillicothe to Greenfield, 20 miles, is ironed, and is now run by both freight and passenger trains. It is expected the whole distance from Cincinnati to the coal mines, about 12[illegible] miles, will soon be opened.

Cincinnati and Dayton Short Line is [illegible] miles. This comprehends the great tun of 10,000 feet, of which 3000 have been The whole line is now under constructi

Cincinnati, Xenia, & Cleveland Shor Between Cincinnati and Cleveland by

route, will be 220 miles. From Cincinnati to Delaware is under contract.

Clinton Line, between Tiffin and Pennsylvania State line is constructing.

Tiffin and Fort Wayne, a prolongation of the Clinton line, 102 miles, is under contract.

Pittsburg and Cincinnati Railroad, via McConnellsville, is partly under construction from McConnellsville to Cambridge.

These lines are now in course of construction, under such circumstances, as will probably secure their completion. They comprehend about 600 miles, and will bring the aggregate to 2,800 miles. Besides which, there are 1,500 miles of additional railway projected, and much, without doubt, will be accomplished. On the whole, there is scarcely a doubt that within five years full 4,000 miles will be made in Ohio. The stringency of the money market only increases the *time* required to finish the roads. It will not prevent the completion of any. We neither have, nor shall have, such severe pressure in the financial world as will prevent the investment of surplus capital, constantly accumulating in whatever business is likely to afford large profits. Every day demonstrates, with more certainty, the fact that Western Railways are profitable, and will remain so. On this subject we present

3. A VIEW OF PROFITS.

The only lines in Ohio which have been in operation long enough to give a view of their receipts, are the Cincinnati, Columbus, and Cleveland, the Cincinnati, Dayton and Sandusky, the Hamilton and Eaton, Greenville and Miami, the Sandusky, Mansfield, and Newark, the Cleveland and Pittsburg, the Cleveland and Erie, Ohio and Pennsylvania. Of these Roads, we give below the cost and the gross and *net* receipts, after deducting the expenses, for 1853.

	Cost.	Gross Rec'pts.	Net Rec'pts.
Little Miami,	$3,480,140	$667,558	$352,132
Columbus and Xenia,	1,291,700	314,434	168,612
Cleveland and Columbus,	3,833,348	1,191,873	611,097
Cincinnati and Dayton,	2,508,04	321,793	200,956
Mad River,	4,110,148	540,518	113,401
Eaton and Hamilton,	1,124,000	89,855	49,974
Cleveland and Pittsburg,	3,280,000	432,602	267,278
Greenville and Miami,	462,448	37,062	22,821
Aggregates,	$3,595,683		$1,786,271

Of the Cleveland and Erie, and the Sandusky and Mansfield roads, we have no returns. From the above aggregate, it appears,

1. That the aggregate *cost* of the roads is $20,105,787.

2. That the *net* receipts were 8¾ per cent, on the entire cost.

3. That the net receipts are about 50 per cent of the gross receipts.

4. INTRINSIC AND MARKET VALUE OF STOCK.

Collecting the aggregate value of stock *in market*, by the quotations of the *American Railroad Journal*, we have the following result in round numbers:

Little Miami Railroad,	$3,860,000
Columbus and Xenia,	1,382,000
Cleveland and Columbus,	4,410,000
Cincinnati and Dayton,	2,560,000
Eaton and Hamilton,	640,000
Mad River,	3,100,000
Cleveland and Pittsburg,	2,724,000
Greenville and Miami,	250,000
Aggregate,	$18,986,000

The market *depreciation* of these stocks is, therefore, $1,219,000, and at that, the rate of interest paid by the net receipts is 9½ per per cent. An *eight* per cent stock, however, will be allowed by all persons, to be intrinsically worth par, allowing for taxes and charges. The railway stocks of Ohio are, therefore, now to be bought in market at full *eighteen per cent below their real value*, calculated by the strictest rules of financial estimation. This is a direct consequence of what is called a *stringent money market*. But while this fact remains, the demand for railways will not be materially diminished, for the simple reason that railway stocks offer the greatest temptation to the money holder. At the present time, real estate, in all our great cities, is enormously high, and cannot be invested in without the risk of a great depreciation in price. The business of railways, however, does not diminish, but increases, so that a relative fall in their value is not to be looked for much beyond what has already taken place.

The above view of the Ohio railways proves one thing most conclusively, that the investment in Ohio railways has been advantageous to all parties, while it is equally clear they have contributed largely to the prosperity of the country.

Railroads.

INDIANA AND ILLINOIS CENTRAL RAILWAY.

The new Board of Directors of the Indiana and Illinois Central Railroad Company organized by electing Judge J. L. Roache, President; William Martin, Vice President; John S. Spann, Secretary; Elijah Newland, Treasurer; J. A. Liston, Attorney, and John C. Campbell, Engineer.

The Indianapolis *Daily Journal* of the 10th, contains the following relative to this company:

INDIANA AND ILLINOIS CENTRAL RAILROAD.—From a statement submitted by the President to the Annual Meeting of the Stockholders, on the 3d inst., we glean some items which will be of interest to the public generally. A careful survey of the route from this city to Decatur, Illinois, has been made by the Chief Engineer, John C. Campbell, Esq., presenting the following result:

GRADIENTS:

57.55	miles,	level.
26.26	do	under 20 feet per mile.
18.87	do	from 20 to 30 feet per mile.
46.86	do	over 30 do do
149.54	total length.	

LINES AND CURVES:

139.05	miles	straight line.
6.14	do	curved, radius 5730 feet.
2.08	do	do do 2865 do
2.27	do	do do 1910 do
149.54		

Giving 93 per cent. of straight line.
Longest tangent, 70 60-100 miles.

The whole work has been undertaken by a most responsible firm in New York, M. C. Story & Co., who are to complete the road for $22,000 per mile, as follows:

"To grub, grade and construct the road from Indianapolis to Decatur, with the bridging, culverts, cattle-guards, switches, road-crossings, drains, and ditches, furnishing and laying down the superstructure, and completing the same ready for ballasting, also to expend $75,000 under the direction of the company, in the erection of suitable station-houses, water-stations, turn-tables, &c., and to supply furniture as follows:

10 Locomotive Engines of 20 tons weight.
10 First Class Passenger Cars.
4 Baggage Cars.
2 Mail Cars.
30 Gravel Cars.
50 Box Cars.
25 Platform Cars.
25 Stock Cars } Of Eight Wheels.
15 Hand Cars.

The aggregate sum of all the excavations not to exceed fifteen thousand yards per mile.

ESTIMATED COST:

149 56 miles at $22,000 per mile	$3,289,280
Estimate for excess of excavation over fifteen thousand yards per mile	448,620
	$3,738,500

Which sum, by the contract, is to be paid as follows:

30 per cent. in the 7 per cent. bonds of the company, secured by a first mortgage on the road	$1,869,250
20 per cent. in Stock	747,700
30 per cent in cash	1,121,550

The following is a statement of the

STOCK ACCOUNT:

Cash Stock subscriptions	$239,500
Land Stock subscriptions	1,566,050
Stock issued to solicitors	3,400
Stock issued to contractors for construction	6,100
	$1,914,050

Several divisions of the work have been sub-let, embracing the entire Western Division from the Wabash river to Decatur, a distance of eighty-four miles, and a large force is now upon the line. Ample means for the summer's work have been provided, and the prospects for the future are of the most flattering character.

INDIANA, KALAMAZOO AND GRAND RAPIDS, RAILROAD.—This company organized under the General Railroad Law of Indiana, proposes to build an air line road from Hartford, city, county seat of Blackford county where it intersects the Fort Wayne and Southern road, to Grand Rapids, in Michigan. The length of the road from Hartford to Grand Rapids is about 213 miles; about 107 miles in the State of Indiana. The road is calculated to run through the following places. From Hartford to Warren, Columbia, Huntington, Albion, LaGrange, Lima, Sturgis, Centerville, Kalamazoo, to Grand Rapids.

The country through which it runs is generally level and easily graded. Most of the way, the land within ten miles of the road is well cultivated, and densely populated.

In Lima, over $75,000 have already been subscribed, more is being taken.

In Sturgis over $50,000 stock has been taken. We gather the above items from the Centerville (Mich.) *Chronicle*. We had heard of the company before, but knew not of the whereabouts of its location.

ASHTABULA & NEW LISBON RAILROAD.

This is a line of road of which we have had but little information heretofore. We are indebted to Mr. Hubbard, a Director, for a copy of the Engineer's report, from which we gather the following elements of the road, from which it will be seen that the estimate of cost of construction is below the average of Ohio roads.

The surveys were commenced in October last. The line is divided into two divisions, northern and southern; the former extending from Ashtabula Harbor, to the point of intersection with the Cleveland and Mahoning road, near Niles and Warren; the latter lies between this point of intersection and New Lisbon.

On the Northern Division, two routes have been surveyed. The Jefferson route gives the distance to Niles 50.7 miles; maximum grade, 26.4 feet per mile; estimate for grading and bridging $2,813 00 per mile.

The Austinburgh route gives the distance to the Cleveland and Mahoning intersection as 47.8 miles, making only 3.10 miles difference in favor of this route; the maximum grade is 26.4 feet per mile; estimate for grading and bridging, $3,523 00.

On the Southern Division, the route known as "the Middle Beaver" is decidedly the best. It crosses the Ohio and Pennsylvania road near the town of Franklin Square, following the valley of the Middle Beaver to New Lisbon, requiring no grade higher than 32 feet per mile.

The entire distance from Ashtabula Harbor to New Lisbon, via Warren and Niles, is 84.13 miles.

Grades as follows:

Of 31.7 feet to mile	4.72	miles.
" 26.4 do do	6.17	do
" 10 to 20 do	7.16	do
10 do and less	31.62	do
Continuous straight line	73.00	do

Average of grading and bridging per mile, $5,582 00. Total cost, $1,515,920 00.—These estimates are for a first class road.

From Ashtabula to New Lisbon the general course is nearly due south, through one of the best agricultural regions of the Reserve. From Niles to New Lisbun, 30 miles, is one continuous coal field, of excellent quality, furnishing an unlimited amount of freight for the road when completed. Iron, in inexhaustible quantities, is also found at Niles and New Lisbon; at the latter places also are hydraulic cement and lime in quantities.—The connections, crossings, and intersections of this road are many and valuable.

The report of the engineer, Mr. Wm. Hale, is very able and full; we regret that we cannot find room for it all.

PANAMA RAILROAD.—The length of the part completed is 31 miles, and the receipts for that part, for the month of March, were $66,070.

Communications.

For the Railroad Record.

THE MISSISSIPPI & TENNESSEE RAILROAD.

MR. EDITOR:—The above road which has thus far excited but little attention abroad, is destined soon, in view of its important connections, to occupy a prominent position among the Railroads of the South.

Its southern terminus is Grenada, Miss., where it connects with the Central road, extending south to Canton, and thence to New Orleans and Mobile, by the Great Northern, and the Mobile and Ohio roads. At Memphis, its northern terminus, it connects with the Memphis and Louisville, and the Memphis and St. Louis roads on the north, the Memphis and Charleston on the east, and the Memphis and Little Rock on the west, (all of which roads, except the latter, are in actual process of construction,) thus making Memphis a grand focus, from which radiate roads permeating every quarter of the Union, exchanging at this point, the rich mineral and agricultural products of the North, for the great textile product of the South. If a straight line be drawn from St. Louis to New Orleans, it will pass through Memphis and over the Mississippi and Tennessee road, and connect those two points by a practicable railroad route not exceeding 530 miles, whereas by the Mississippi river, a great highway, paved with human bones, the distance is 1246 miles, and from Cincinnati to New Orleans by this route, a saving of nine hundred miles is effected over the river route.

This road penetrates for its entire length of 97 miles, the richest cotton-growing section of Mississippi, and at the lowest estimate, will add to the trade of Memphis, one hundred thousand cotton bales, which find their way to New Orleans through the small tributaries of the Mississippi river. The road is one of easy construction, passing over a comparatively level country, with a light sandy earth and no rock whatever. The attention of capitalists and contractors is invited to it as affording unusual facilities for good investments and profitable work.

MINOR MERIWETHER,
Chief Engineer.

For the Railroad Record.

MR. EDITOR:—Having observed an occasional notice in your valuable RAILROAD RECORD, of the charter of the Kentucky Union Railroad, at the last session of the Legislature of that state, in very flattering terms, which, according to the provisions of its charter, will constitute a part of the railway entitled by an act of the Legislature of Tennessee "the Cincinnati, Cumberland Gap and Charleston Railroad." The charters of the roads, both in Tennessee and Kentucky, make Cumberland Gap a point, it being on an almost direct line from Cincinnati to Charleston. Believing, as I do, that you fully appreciate the importance of this great work, and that you, and many of your numerous patrons, would be interested in knowing what steps are being taken in Tennessee to consummate the speedy construction of this most magnificent railway, being equal in importance to any that has ever been, or that ever will be built in the United States, connecting as it will, the Ohio Valley at Cincinnati, via Cumberland Gap, with the Atlantic sea-board, and Beaufort, by the shortest, cheapest and most practicable route, with an intermediate country equal to any in the world for stock and grain-growing, and surpassed by none for the variety abundance and richness of its minerals. Where can there be found more extensive or inexhaustible coal fields than those extending from Cumberland Gap to, or near, Richmond? There, too, are the Goose Creek salt works, and many other valuable minerals, in Tennessee, south of Cumberland Gap. The counties penetrated by, and situated east of this contemplated road, contain the principal valuable minerals of the state, and in no part of the state are there to be found so great a variety and abundance of minerals, as in the counties through which this road will pass. In Claiborne county, touching at Cumberland Gap, are to be found rich and very extensive zinc and lead mines; iron ore of the best quality in endless quantity; quarries of the best mill-stone rock, equal to the best French burr, extending through the entire length of the country; hydraulic lime in endless quantity, and probably extensive quarries of marble and plaster of paris. In other counties in Tennesse, along the line of this road, are found the most extensive marble quarries in the United States, of the finest quality; it is from one of these quarries that the Capital, at Washington, is now being furnished with marble.

But what are we doing in Tennessee to promote the immediate construction of this road, which will be about seventy-five miles long in this state? The last session of the Legislature passed a charter for it, with very liberal provisions, making but two points, Cumberland Gap and Paint Rock—the latter in the French Broad valley. The Commissioners appointed by the charter, have opened books, and raised more than the amount required by the charter to organize or form a company. They have appointed a day for the stockholders to elect their directory, or board of officers, and in two weeks from this time the Cincinnati, Cumberland Gap and Charleston Railroad Company will be organized, and a sufficient number of agents will be in the field soliciting stock, until the amount necessary to grade the entire road shall be raised, which will require but a short time, from present indications of public spirit. Also, the company will in a very short time

have a competent body of engineers to make estimates of cost and construction, (which must be from ten to twenty thousand dollars per mile less than upon any other route heretofore spoken of,) and to locate the road permanently. In fact, the counties of Clairborne, Hancock, Hawkins, Grainger, Jefferson, Green, Cook, and others east of this road, that feel a deep interest in its construction, will be able, and will at once take the remainder of stock necessary to build this road, there being but little more to raise in addition to the individual subscriptions already taken, and the very liberal aid the state has given this road by an act of the last session of its General Assembly. No road in the state was better cared for than this. The distance as before mentioned between Cumberland Gap and Paint Rock, on the southern boundary line of the state, is about seventy five miles. The state, by the act above referred to, loaned the company her bonds to the amount of ten thousand dollars per mile, and two hundred thousand dollars in addition to build road bridges, and the masonry on the road, which would be nine hundred and fifty thousand dollars, or nearly equal to thirteen thousand dollars per mile, at least two thirds of the whole amount necessary to construct that part of the road in Tennessee, the other third will be easily raised in a short time—much of which has already been subscribed by individuals.—Thus you see there can be no barrier in the way to check the immediate construction of that part of the road that will be situated within the limits of Tennessee. We hope that your flourishing city, which must be immensely benefitted by this vast enterprise, by being connected by railroad on the nearest possible route with the Atlantic sea-board at Charleston, passing through one of the richest agricultural countries in the world; the most extensive coal fields, and in East Tennessee, through or near immense mineral regions, that would in all time to come, prove a source of employment and wealth to it, will at once take this subject in hands and give it all possible encouragement by a liberal subscription, that we may be enabled to interchange commoditics—let you have our pig-iron, blooms, zinc, lead, burr-rock, copper, hydraulic-lime, fine marble, and many other articles produced in East Tennesssee, in exchange for your groceries, dry goods, and every kind of articles manufactured in your city, and become rivited together by the cement of interest into one brotherhood.

CUMBERLAND GAP.

Tazewell, Tenn., May 4th, 1854.

HILLSBORO' RAILROAD—ELECTION. — The following gentlemen were chosen Directors for the ensuing year: William P. Cutler, Washington Mc'Lean, Samuel B. Keys, W. S. Nye, Alphonso Taft, Samuel O. Byrd, D. J. Fallis. The vote was unanimous.

SETTLEMENT OF THE "ERIE" DIFFICULTY.

As many of our readers are interested in the settlement of this vexed question, we give at length the act passed by the Pennsylvania Legislature, and accepted by the Cleveland, Painesville and Ashtabula Railroad Company, and needing only the signature of Gov. Bigler, which it will undoubtedly have, to become a law.

A perusal of the act will convince any one that no concessions are made by the Ohio Company, that would not have been willingly made at any time heretofore, had the besotted inhabitants of Erie so willed it.

AN ACT relating to the Sunbury & Erie Railroad Company and the Cleveland, Painesville & Ashtabula Railroad Company.

SEC. 1. The Cleveland, Painesville & Ashtabula Railrood Company, as incorporated under an act of the General Assembly of the state of Ohio, passed the 13th of February, A. D., 1848, entitled "An Act to incorporate the Cleveland, Painesville & Ashtabula Railroad Company," and an act supplementary thereto, passed Dec. 10, 1850, be, and they are hereby authorized to construct and use a railroad, with one or more tracks, commencing at and in the city of Erie, thence extending south-westwardly by the most practicable route on or along the Franklin Canal Railroad, to a point on the state line of Ohio, where it may connect with the Cleveland, Painesville & Ashtabula Railroad, subject to the provisions of an act regulating railroad companies, passed the 19th February, 1849, and that they be and are hereby authorized to connect their road with any railroad or railroads, legally authorized to come to or lay a road within the city of Erie. *Provided*, That all such connections shall wholly cease so soon as the Sunbury and Erie Railroad Company shall have a track or tracks open for use leading into said city, unless they shall also make a connection therein with the said Sunbury and Erie Railroad at the depot of the said last named company.

SEC. 2. That the said Cleveland, Painesville and Ashtabula Railroad Company be and are hereby authorized and required to purchase the railroad now constructed from the city of Erie to the Ohio state line and all the right or interest of the Franklin Canal Company, or any other parties in and to the same, with its appurtenances and the right of way, and all other rights and property connected therewith, and shall also purchase any shares of the said original Franklin Canal Company's stock at par and pay the interest and principal on all bonds of said company according to their tenor, and thereafter the said Cleveland, Painesville and Ashtabula Railroad Company may use and enjoy the said railroad and its appurtenances, with a full release of any and all the rights and claims of the Commonwealth thereto or therein, and the said Franklin Canal Company is authorized to make such sale and transfer to said Cleveland, Painesville and Ashtabula Railroad Company.

SEC. 3. That the said Cleveland, Painesville and Ashtabula Railroad Company shall extend the track or tracks of their road, equal in all respects except the grades, to the main track from a point west of Liberty street, being the western boundary of the city of Erie, north-westwardly by the most practicable route to the harbor of Erie, at or near the depot grounds of the Sunbury and Erie Railroad Company, and have the same opened and ready for use within two years, or sooner, if the said Sunbury and Erie, or any other railroad coming from an eastwardly direction, shall have one or more tracks completed to the said harbor: *Provided*, That the Sunbury and Erie Railroad Company shall grant such use of their depot grounds as may be agreed upon by the parties, and that the city of Erie shall grant free the right of way over and along such public streets or public grounds as may be required for the track or tracks of said road to the harbor.

SEC. 4. That all the privileges and immunities granted to the Cleveland, Painesville and Ashtabula Railroad Company in and by this act, are granted upon the following terms and conditions, namely:

First, The said Cleveland, Painesville and Ashtabula Railroad Company, shall make such connection between their railroad and that of the Sunbury and Erie Railroad Company, at or near the city of Erie as may be best adapted to the safe, cheap and ready transferring of cars, passengers baggage and freigbt from one road to another, so soon as the western division of the said Sunbury and Erie Railroad shall be finished, and that so soon as the said Sunbury and Erie Railroad Company shall have laid down a track of road from Sunbury to Erie, then and thereafter the said Cleveland, Painesville and Ashtabula Railroad shall run their freight and passenger trains to the depots of the Sunbury and Erie Railroad Company, and from then and thereafter, shall not grant, furnish or allow any company whose railroad shall terminate or pass through or near the city of Erie, nor to any company or companies whose road or roads shall connect with or be contiguous to such road terminating at or passing through or near the city of Erie, any facilities privileges or advantages which are not equally granted and furnished to the Sunbury and Erie Railroad Company, nor give or furnish or permit to be given or furnished, by any agent or by any person or persons, company or companies, using their road directly or indirectly, any inducement of any kind whatever to any party to travel or to send or forward property or mail matter in any direction on or over any railroad so terminating at or passing through or near the city of Erie, or connecting as contiguous therewith, in preference to traveling or sending or forwarding such property or mail matter on or over the said Sunbury and Erie Railroad, and all passengers, property and mail matter passsing over the same, shall be received and dispatched by the said Cleveland, Painesville and Ashtabula Railroad Company with all proper and reasonable speed and dispatch. *Provided*, That the Commonwealth hereby reserves the right, at any time that may be deemed necessary, to protect her interests, to impose such taxes on the Cleveland, Painesville and Ashtabula Railroad Company as may be imposed by any general law upon all the railroads of the Commonwealth.

Second. The said Cleveland, Painesville and Ashtabula Railroad Company shall, before exercising any of the rights or franchises hereby granted, subscribe for 5,000 shares of the capital stock of the Sunbury and Erie Railroad Company, to be paid for in the bonds of the said Cleveland, Painesville and Ashtabula Railroad Company, as hereinafter authorized to be issued, bearing 7 per centum per annum interest, payable half yearly, the principal

payable in twenty years, to be secured by a mortgage of all their property, rights and franchises, and which shall be a first lien or mortgage on that part of their property in Pennsylvania, and on the rights and franchises granted or to be granted by this act. Said mortgage to be executed to such trustee as shall be satisfactory to the said Sunbury and Erie Railroad Company. The payments in bonds on account of such subscription to be made, and stock issued therefor in the same proportions, and at the same times, that the city of Philadelphia shall make their payments on their second subscription of ten thousand shares to the capital stock of the said Sunbury and Erie Railroad Company, which said five thousand shares of stock, unless otherwise agreed to by both parties, shall be inalienable until the maturity of the bonds given in payment therefor, and so declared on the face of the certificate for the same, and in all the elections or stock votes of the Sunbury and Erie Railroad Company, one thousand six hundred and sixty-seven shares and no more, may be voted upon by the said Cleveland, Painesville and Ashtabula Railroad Company.

Third, That at least three of the Directors of the said Cleveland, Painesville and Ashtabula Railroad Company shall be citizens of the Commonwealth of Pennsylvania.

Sec. 5. That said Cleveland, Painesville and Ashtabula Railroad Company be, and are hereby authorized to issue their bonds in sums of not less than $100 each, bearing interest at the rate of 7 per centum per annum, payable half-yearly to be secured by a mortgage or deed of trust of all their property, rights and franchises, to the amount of $500,000; and the said Sunbury and Erie Railroad Company are hereby authorised to receive said bonds at par in payment as before provided, for the subscription to their stock hereinbefore authorized and directed to be made.

Sec. 6. That if the said Cleveland, Painesville and Ashtabula Railroad Company shall in any respect knowingly and intentionally refuse or neglect to perform and comply with all and singular the terms and conditions hereinbefore recited and imposed, the fact of such refusal or neglect having been adjudged by a court of competent jurisdiction, then, and in such case, all the rights and privileges, powers and immunities granted to said Company, by this act, or intended so to be, shall forthwith cease and determine. *Provided*, That nothing herein contained, shall be construed to release the Cleveland, Painesville and Ashtabula Railroad Company from liability to the Sunbury and Erie Railroad Company by reason of such refusal or neglect; but the said Sunbury and Erie Railroad Company may from time to time recover from said Cleveland, Painesville and Ashtabula Railroad Company such damages as they may sustain therefrom.

Sec. 7. That immediately upon the passage of this act the Susquehanna and Erie Railroad Company may assign and transfer to the Sunbury and Erie Railroad Company all their estate and effects, rights, liberties and franchises; and from and after such transfer and assignment, duly executed under their corporate seal, the said Sunbury and Erie Railroad Company shall become vested with all the estate and effects of the said Susquehanna and Erie Railroad Company, and shall and may exercise and enjoy, all the rights, privileges and franchises of said company in their own name, and in addition to those now employed or possessed by themselves, as fully as though the same had been directly granted to the said Sunbury and Erie Railroad Company. *Provided*, That if the said Sunbury and Erie Railroad Company shall, under the rights and franchises transferred to them by the said Susquehanna and Erie Railroad Company, or under any other legislative authority, construct a railroad leading from the city of Erie to the Ohio state line, parallel with the said Cleveland, Painesville and Ashtabula Railroad, or shall connect with any other such railroad, then and in such case the Sunbury and Erie Railroad Company shall pay to the said Cleveland, Painesville and Ashtabula Railroad Company so much as may have been paid on account of the said subscription of 5,000 shares of stock, either in cash or in the bonds aforesaid, at the option of said Sunbury and Erie Railroad Company; and thereupon the said Cleveland, Painesville and Ashtabula Railroad Company shall deliver up the certificates of stock issued to them to be canceled, and thenceforth the said Cleveland, Painesville and Ashtabula Railroad Company shall be, and are hereby authorized to exercise all the rights and privileges hereinbefore granted, or intended so to be freed and discharged from all and singular the terms and conditions hereinbefore imposed and provided.

Sec. 8. That before exercising any of the rights and immunities hereby granted to the Cleveland, Painesville and Ashtabula Railroad Company, and to the Sunbury and Erie Railroad Company, respectively, either company shall give to the other notice in writing, under their respective corporate seals, that they accept this act and agree to become bound by all the provisions and conditions therein contained; and immediately upon either of said companies giving such notice to the other, then such company shall forthwith be and become entitled to all the benefits, rights, privileges and immunities granted by this act, subject, however, to the performances of the terms, provisions and conditions therein contained.

Fort Madison, Bloomfield and Southern Iowa Railroad.—A meeting of the Directors of this company was held at Fort Madison on the 2d inst. The preliminary report of the engineer was read and discussed, and it was resolved that certain portions of the line should be carefully re-surveyed prior to permanent location.

Among other business the following scale of salaries for the officers of the company was adopted:

The officers, agents and directors of the Board, to be paid only for the time they are actually engaged in the service of the company. The President at the rate of $1,000 per year; Vice President same pay as a Director, except when he acts in place of the President; the Agent $3 a day; each Director $2 a day; Secretary $2 a day for each day's attendance on the Board, and ten cents for every hundred words recorded. The Treasurer for the first one thousand dollars received and disbursed by him—5 per cent.; on the next $5,000 at the rate of 2½ per cent., and for larger sums such pay as the Board shall hereafter fix. Officers, Directors and Agents, to have allowed them traveler's expenses, when from home on business of the company.

A memorial to Congress, relative to the land grants in Iowa, was also adopted.

Nail Machine.—There has recently been invented and put into practical operation in Troy, N. Y., a new machine for making cut nails, the great peculiarity of which is, that it is self-feeding, and will manufacture in a given time nearly, if not quite, as many again nails as any other known process; and that one man, (as it is claimed,) with the assistance of a boy, will operate ten machines. There is also a great saving in iron, there being a waste of only about a quarter of an inch in ten feet, which is the length of the pieces of iron placed in the machine at a time. It has been shown that one machine will manufacture from 300 to 350 nails per minute, all of which are perfect in form and finish.

Pacific, Mo., Railroad.—The city of St. Louis, on Monday, 8th inst, voted for the subscription of $1,200,000 to the Pacific Railroad, to be paid by a direct tax on their own property. Out of near 4,000 voters only about 600 voted against it.

Lexington & Danville Railroad.—The regular annual meeting of the stockholders of the Lexington and Danville Railroad Company was held at Nicholasville, on Tuesday last the 2nd inst. We understand that the late Board of Directors, composed of Messrs. Joseph Wasson, John McMurthy and Phil. E. Yeiser of Lexington, Mr. John G. Sims, of Nicholasville, and Messrs. Thos. Barbee and James Kinnaird, of Danville, was re-elected to serve during the ensuing year.

Heavy Verdict against a Railroad Corporation.—The referees to whom was referred the disputed claim of Boody, Ross & Harris, contractors, against the New Haven and New London railroad, and who have been in session lately at New Haven, have awarded $34,721 to the claimants. The latter once offered to take $30,000 and settle the case. The claim was for unpaid services in the construction of the road, and the referees by whom its merits were passed upon were Capt. William P. Parrott, Col. C. L. Slaughter, and Judge Allen of Boston.—*Springfield Rep.*

Savannah River Railroad.—We are pleased to learn, says the Savannah Courier, that the survey of the route of the above road by Mr. Armes, has been highly satisfactory in many respects It demonstrates the fact, however, that it will cost $150,000 less to cross the river above Augusta and re-cross it again to Hamburgh, than to pursue the Carolina side to the latter place. This road is an exceedingly important one to both Augusta and Savannah, as it will connect both those cities by the Rabun Gap road with Louisville, Kentucky and Cincinnati, Ohio. The line will pass through the richest portions of East Tennessee and Kentucky, and will no doubt pay handsomely.

Louisville and Nashville Railroad.

The suspension of work upon this road has caused considerable excitement among the stockholders at Louisville and elsewhere.—The City Council of Louisville called upon the company for a statement of affairs, which was responded to by Col. Riddle, Vice President, in the absence of Mr. Shreve, President, who is East on business of the company, in substance as follows:

The entire amount of stock subscribed, including the million of dollars voted by the people of Louisville, is $3,328,700, of which $1,218,117 have been paid in, in the forms of bonds, cash, "etc." The estimates for work done on the road to the 1st of April last, "amount to $341,076 26, all paid for; that $63,504 56 have been paid for depot grounds, right of way, and land damages; that the sum of $44,500 have been paid on account of rolling stock for the road; that $50,000 have been paidfor railroad iron,and $89,447 62 have been paid for engineering expenses, instruments, office expenses, salaries, etc."

Of the $500,000 Louisville city bonds, issued to the company $302,000 have been turned into cash and expended on the road and $125,000 of the remaining $198,000 have been pledged for a purchase of three thousand tons of American railroad iron, toward the payment of which the company have supplied $50,000 cash and given their acceptance for $50,000 more.

In consequence of the want of means to prosecute the enterprise, work has been suspended on the whole line with the exception of the section of thirty-two miles from the depot grounds in Louisville, to the crossing of the Rolling Fork of Salt River, the tunnels and other heavy work on Muldrow's Hill, and the crossing of Green river. The thirty-two miles here spoken of, it is stated, will be completed and equipped at an early day the ensuing autumn. And an intimation is thrown out that with such improvement in money matters as will enable them to raise means on such terms as would be just and prudent, the rest of the work can be pushed forward with a vigor that will insure its completion "at a period not far beyond that originally fixed by contract.

The President's return is anxiously looked for, when a more full and complete statement of the affairs of the company is expected, and we sincerely hope that the suspension will be found to be but temporary. This is an important road, affecting the entire interest of the South-west, and we should dislike very much to hear that it cannot be completed.—There surely must be means enough within the reach of the company to finish so important an enterprise, and we cannot but believe that the hope of available means held out in Col. Riddle's report above, is not without foundation.

IRON MANUFACTURE IN THE UNITED STATES.

From the Philadelphia *Bulletin* we take the following:

"To show our readers the importance of the American iron interest so lately revived, we copy below some statisical facts showing the number of mills engaged in the manufacture of railway iron; the probable amount of manufactures in 1854; the items of raw material used in the manufacture; the labor employed; the capital employed, and a few other items of general interest pertinent to the subject:

Railway Mills and their estimated production for the year 1854.

Montour Iron works, Danville Pa.....tons	18,000
Rough and Ready, Danville, Pa.....	4,000
Lackawanna, Scranton, Pa.....	16,000
Phœnix Iron Works, Phœnixville, Pa.....	20,000
Safe Harbor, Safe Harbor, Pa.....	15,000
Great Western, Brady's Bend, Pa.....	12,000
New Works, Pittsburg Pa.....	5,000
Pottsville Iron Works, Pottsville Pa.....	3,000
Cambria Iron Works, Cambria Pa.....	5,000
Trenton Iron Works, N. J.....	15,000
Massachuscetts Iron Works, Boston, Mass.....	15,000
Mt. Savage Iron Works, Mt. Savage Md.....	12,000
Richmond Mill, Richmond Va.....	5,000
Washington Rolling Mill, Wheeling Va.....	5,000
Crescent Works, Wheeling, Va.....	5,000
New Mills, Portsmouth, Ohio.....	5,000
Total.....	160,000

Represented items in the production of 160,000 *tons of Railway Iron.*

Pig Iron required··1¼ ton per ton of rails.....	213,333
Coal used.....5¼ tons per ton of rails.....	840,000
Iron Ore.....3½ tons per ton of rails.....	560,000
Limestone.....1⅜ tons per ton of rails.....	214,333
Total number of tons raw material	1,826,666

Labor employed from the materials in the ground to the finished rail in the market.

In mining, transporting and delivering coals, per ton of coal at $1 92.....	$1,612,800
In mining, transporting and delivering Iron Ore, per ton of ore at $1 60.....	896,000
In mining, transporting and delivering Limestone, per ton of limestone at 65 cts.....	138,666
At and about the furnace per ton of Pig Iron at $3 11.....	663,466
At and about the Mill, per ton of rails at $2	1,920 000
Carrying Rails to market, say average $2.....	320,000
Number of men employed, 18,500—Yearly earnings, $300 per head.....	$5,550,932
Population supported, 5 times 18,500 equal to.	92,500
Breadstuffs consumed per annum, 92,500 persons at $50 per head.....	4,625,000
Capital employed in rail iron works now erected.....	10,000,000

Other interests, as below:

Owners of Coal Lands—royalty—valued on a ton of rails at $1 84.....	294,000
Coal Operator—his average profit valued on a ton of rails at 95 cts.....	152,000
Owners of Ore Lands—royalty—valued on a ton of rails at $1 41.....	225,600
Owners of Limestone Quarries—quarry Cave, valued on a ton of rails at 13 cts.....	20,800
Caiptalists—use of money, interest, &c., valued on a ton of rails at $1 50.....	240,000
Transportation Companies—clear profits over and above working expenses, valued on a ton of rails at $3 78.....	604,800
Storekeepers and others, for merchandise, oil, brass, fire-brick, &c., valued on a ton of rails at $2 39.....	382,400
Total.....	$1,919,600

The above is only a partial statement, affecting only some sixteen iron mills, and only six of the thirty-one States of this Union. It shows the business only in its infancy, but its future importance to the country, if not now destroyed, looms up in gigantic form. Every State in the Union with one or two exceptions, has rich iron and coal beds.

☞The Genessee Valley Railroad will be opened for business as far as Avon, on the 20th June.

The Caloric Ship Ericsson.—It will be seen by the subjoined letter from Captain Ericsson that his confidence in the practical utility of his application of caloric as a motive power for steamships has been strengthened by further experiment. The perseverance and energy which he and Mr. Kitching have displayed, under the most untoward circumstances, command admiration:

To the Editors of the Commercial Advertiser:

Sirs:—The serious accident to the "Caloric Ship" last Thursday, has deprived me of the anticipated pleasure of inviting you to witness the performance of the new machinery of this ship. Pevious to the untoward occurrence, Mr. Kitching had cheerfully agreed to my proposition of making a formal trial trip, this week, to afford the New York press an opportunity of witnessing the practical operation of the new machinery, and of hearing my explanation of the important changes which have been made in regard to that motive power, which a year ago was heralded to the world by the distinguished press of New York in a manner altogether unprecedented in the history of mechanical progress.

As soon as the ship and machinery are again in serviceable condition, I shall not lose a moment in performing the agreeable task of rendering the proposed account of the invention. In the mean time, I have to state that, when the noble ship went down, the motive power had proved *completely successful.* The engines had not been put to anything like maximum work, and yet we attained a speed of more than *eleven* miles an hour, with a consumption of fuel which promises to render navigation, in point of economy, what it has proved in point of celerity.

I am, very respectfully, your obd't. servant,
J. ERICSSON.

New York, May 3, 1854.

The Indiana South-Western R. R.—We learn that Mr. Dennis, who has charge of the locating party of Egineers on the South Western Railway, and who has been so long and well known here as an Assistant Engineer to Col. T. A. Morris, has completed his line from Vincennees to Point Commerce, and has found a most admirable one, and that the party have gone back to Vincennes, and are now engaged in staking off the east work for the contractors.

The Company hope, with the means already provided along the line, and without borrowing any money, or going from home for aid in any shape, to prepare their road-bed for the iron between those points during the present season.—*Indiana Journal.*

The car house and freight depot of the Buffalo and Brantford R. R., was burnt a few days ago with two locomotives, several cars, &c. Loss $100,000.

The Brough Road.—Messrs. Sanger, Stewart & Co., contractors on this road, advertise for proposals for building the first seventy-two miles, from St. Louis to Vandalia. Proposals received until May 13. Only short time given, as the road is to be built with as great speed, perhaps, as has ever been accomplished in the country.

CONSOLIDATED RAILROADS.—The Legislature of Maryland, at its last session, passed an act to consolidate the Baltimore and Susquehanna, York and Cumberland, and other connecting railroads; placing them all under the control of one set of Directors and a President. By this act the state also relinquishes its whole claim against the Baltimore and Susquehanna Railroad, (amounting to about three millions of dollars,) on condition that an annuity of ninety thousand dollars should be paid by the amalgamated companies into the public treasury. To carry the act into effect it was necessary that it should be approved by the Legislature of Pennsylvania, which, we understand has been done. The City Council of Baltimore was also authorized either to relinquish a claim amounting to about nine hundred and fifty thousand dollars which the city holds against the first named company, or to contribute otherwise to the assistance of the new company.

☞The preliminaries have been agreed upon between the Southern Wisconsin Railroad Company and the Milwaukee and Mississippi Railroad, by which the gauge from Janesville to Dubuque is to be changed to four feet eight and a half inches, the same as the Milwaukee road; and in consideration therefor, the Milwaukee and Mississippi Company endorse the bonds of the Southern Wisconsin Company, to the amount of $300,000. This sum with the aid obtained at Janesville, in Green, Lafayette and Grant Counties, with some assistance from Dubuque will, it is understood, complete the road.

WILMINGTON AND MANCHESTER RAILWAY. The following shows the earnings of this road for each of the four months ending March 30, 1854:

Earnings in December, 1853	$11 803 21
Earnings in January, 1854	14,049 85
Earnings in February, 1854	27,394 16
Earnings in March, 1854	27,343 65
Total	$80,590 87

The road has only been completed a few weeks, and has no part of the cotton crop of last year for transportation.

NEW ALBANY AND SALEM RAILROAD.—The earnings of the Northern Division of this road, for March, are as follows:

Passengers, - - -	$12,068 95
Freight, - - - -	10,176 85
Total, - - - -	$22,245 80

EFFECTS OF RAILROADS.—Three years ago there were thousands of acres of land in Harrison Co., Ky. that could not be sold for $3 per acre, and now we are informed that there is not an acre of land in the country worth less than $10, even in places most remote from the Railroad. How much then, has been the pecuniary benefit of Harrison county derived from the construction to the Railroad? Let our readers make the calculation for themselves.—*Cynthiana News.*

NEW ORLEANS, JACKSON AND GREAT NORTHERN RAILROAD.—On the 24th ult., the following named gentlemen were elected Directors of this company for the ensuing year, viz:

Louisiana Directors—James H. Caldwell, W. S. Campbell, Wm. P. Converse, Thos. Hale, J. P. Harrison, P. Irwin, A. D. Kelly, Emile La Sere, Geo. M. Pinckard, Chas. Pride, H. J. Ranney, and James Robb.

Mississippi Directors—Wirt Adams, W. R. Cunningham, Thos. S. Dabney, Christian Hoover, C. C. Shackleford, and John L. Tindall.

The Board was organized on the 27th, by the unanimous re-election of James Robb, Esq., as President. Mr. Robb tendered his resignation as President, in consequence of the pressure of his own private affairs, though he will still remain in the Board.

The Board accepted the resignation and passed complimentary resolutions relative to the official conduct of Mr. Robb while President of the company.

Col. W. S. Campbell was then unanimously elected to fill the vacancy.

MISSISSIPPI AND ROCK RIVER JUNCTION RAILROAD.—A meeting of the stockholders of this road was held at Dixon, on Tuesday, May 2d, at which the following officers were elected, viz:

John Van Nortwick, Esq., President; John B. Turner, Walter L. Newberry, Wm. H. Brown, Hugh T. Dickey, B. W. Raymond, Thos. Dyer, James H. Collins, E. Peck, Directors.

The Board subsequently elected E. Peck, Esq., Secretary and Treasurer.

TOLEDO AND ILLINOIS RAILROAD.—The tedious suit that has been pending several days between this company and the proprietors of certain lands, known as the Middle Ground in Maumee River, relative to appropriating the same to the use of the road, was lately amicably settled by an agreed verdict for the payment of $11,000.

THE NEW ORLEANS, JACKSON AND GREAT NORTHERN RAILROAD.—The *Delta* says:—The contractors upon this road are pushing their work with great rapidity during the present propitious season, and it is expected that the cars will run as far as the State line by the first of July next. A line of nearly one hundred miles of railroad will then be in operation, and a trip to the "piney woods" be regarded as a new source of pleasure, offering a healthful resort to the public from the heat and dust of the city.

☞Samuel Watson has been elected President of the Edgefield, Tennessee and Kentucky Railroad Company.

FOX RIVER VALLEY RAILROAD.—We learn from B. W. Raymond, Esq., President of the Fox River Valley Railroad, that during his recent visit to New York he closed a contract for all the iron necessary to lay down the track of that road. A portion of the iron is now on the way across the Atlantic, and the whole of it will probably reach here during the next four months. It is the intention of the Company, if not disappointed in the reception of their iron by the time specified, to have the road to Richmond by the 1st of October next.—*Ex.*

ASH'S IMPROVED HORSE POWER ROCK DRILL.—We would call attention to Mr. Ash's advertisement in our columns. By the use of this machine labor can be greatly facilitated in tunneling, quarrying or boring, either perpendicularly or in a slanting direction downwards of 2 inches to the foot. It operates with a very small amount of force, makes a hole of four inches, to any depth, and rapid progress. We commend it to contractors and others as a valuable and economical assistant in their labors.

EVANSVILLE AND CRAWFORDSVILLE RAILROAD.—The Terre Haute *Express* says:—All the Iron for the track of this road between Vincennees and Terre Haute has been received; 275 tons of which are deposited here. The work of laying the rails will commence in three weeks, simultanesusly at both ends of the line. The company intend to have it in running order by October.

MYERS' PATENT CYLINDRICAL CAR.—We are pleased to learn that Mr. Wm. Clough, of the South Western Car Factory, at Madison, has become proprietor of this valuable car, for a portion of Western Territory. We hope soon to see it introduced upon our coal roads especially. He is prepared to supply such companies as need them. See his advertisement in our columns.

MONROE AND TOLEDO RAILROAD.—We learn that a meeting of the Stockholders of the Maumee Branch Railroad Co. was held in New York City, last week, for the purpose of taking measures to contract the above road. There are several men of capital and enterprise engaged in the above work, and they can easily, if they choose, build that road, which we doubt not will be good stock. We have not heard the result of the movement.—*Jonesville Telegraph.*

MAYSVILLE AND LEXINGTON RAILROAD.—The following gentlemen have been elected Directors of the Maysville and Lexington Railroad Company for the ensuing year, viz:

Henry Waller, President; A. M. January, C. Shultz, Maysvile; F. T. Hord, T. M. Forman, Mason County; George Robertson, Fayette County. Gen. Forman and Judge Robertson are new members.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

MONETARY.

The prospects for money at the East are brightening; the last few days have witnessed much greater ease in monetary affairs though confidence in the future is not yet fully restored.

The New York City Banks report caused much pleasant surprise, showing a heavy advance in deposits, specie, loans, and circulation. Upwards of two and a half millions in gold dust have been received by the last two steamers from California.

Call loans are readily had at 6 @ 7 per cent. Number one, short paper is scarce at bank rates, long paper at 9 @ 10 per cent. Railroad securities at 1 @1½ per cent. per month.

Foreign Exchange rates at 109 @ 109½, with a small shipment of specie.

The Stock Market has partially revived from its depression and the better class of stocks were far more active at an advance of from 1 to 2 per cent.

The sales of stocks at Auction at the East were large during the past week.

We report the following among other sales:

By A. H Nicolay, May 8th.

$5,000	Lyons, Iowa, Cen., RR. 1st mort. 7s, '73,	30	25

At the West an improved feeling is noticable in monetary affairs, though money itself cannot be said to be easier, further than that number one paper finds ready purchasers, at rates under 1 per cent. per month. Good paper rates between 1 and 2 per cent. Railroad securities 2 @ 3 per cent. per month, of this class there is not so much offering as heretofore however, many of the Companies choosing rather to suspend operations temporarily, than submit to such sacrifices.

Railroad stocks and shares have improved partially; for particulars we refer to our usual quotations.

The earnings of the various companies for April show a large increase over the same month last year, and over March of this year. Our usual monthly exhibit, in the ensuing issue, will give the items as far as they come to hand. Such of our Western roads as desire to be represented will please forward a statement of earnings without delay.

NOTICE TO CONTRACTORS.

SEALED Proposals will be received at the office of the undersigned in Indianapolis until the 10th of June next, for the Grading, Masonry and Bridging of that portion of the Indiana and Illinois Central Railway extending from Indianapolis to Bainbridge, in Putnam county, being a distance of about 35 miles, of heavy work. The map and profile, together with the plans and specifications will be ready for inspection on and after the 1st of June at the office of the undersigned at Indianapolis. The undersigned reserve to themselves the right to reject all proposals that are not satisfactory.

M. C. STORY & CO.

Indianapolis, May 15, 1854. my. 18-tt.

NOTICE TO CONTRACTORS.

PROPOSALS for the entire Construction and Equipment, or the graduation, bridging and masonry separately, either in whole or in part, of the Mississippi and Tennessee Railroad. (extending from Memphis to Grenada Mississippi, about 97 miles,) will be received at the office of the company in Memphis, till the 20th of July next. Proposals for the entire construction and equipment, and otherwise as favorable, will have preference. Profiles and estimates of the first 60 miles may be seen on application at the Engineer's office in Memphis. Bidders must furnish satisfactry evidence of their ahility to complete the work.

MINOR MERIWETHER,

May 20, 1854. Chief Engineer.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Marietta & Cincinnati Railroad.

OPEN between CHILLICOTHE and GREENFIELD, Connected by Stage at Hillsborough, with Hillsborough and Cincinnati, and Little Miami Railroad Trains, forming a through daily line each way.

On and after Monday, the 8th of May, passenger trains will run as follows, viz:

Leave Chillicothe at 9 00 A. M.
Returning do Greenfield at 5 30 P. M.

Passengers from Cincinnati leave by Little Miami Railroad, at 7 40 A. M., dine at Hillsborough and reach Chillicothe the same Evening.

Fare from Cincinnati to Chillicothe, $3 45.

J. W. STOWELL,
Chillicothe, May 6th. '54—. Sup't.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is bold close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with those boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18. Office, No. 167 Broadway, New York.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.
2d, They are a great deal cheaper.
3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the LNEST of weather, as they are in 150 Fahrenc°heit heat.

Armitage Anvils,—10 casks, assorted weights, n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the modo for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by the above, has now been in use ou several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S

PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil ar perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

SIR:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,
W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

WM. SHERBURNE,
PRINCIPAL AGENT,
dec1 Office, No. 167 Broadway, New York.

GUNPOWDER,
MANUFACTURED BY

The Hazard Powder Company,

HAZARDVILLE, CONN.
H. G. HAZARD, President.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, aod the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and he equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

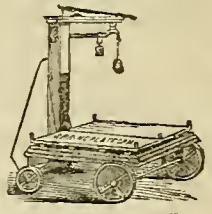
PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.



STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required hurtheo. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

PORTABLE SCALES.

The following Railroads have been furnished exclusively, or nearly so, with FAIRBANKS' SCALES:

Alahama & Tennessee.	Huron & Oxford.

ANALYSIS OF PASSENGER TRAFFIC ON WESTERN RAILWAYS.

The passenger traffic of railways is the most interesting element of their business.—It is that too, which varies according to different circumstances, and upon which the profits greatly depend upon a wise discretion. Having before us several annual reports of roads in, or leading to the West, we propose to analyze them, and deduce from them some of the conclusions of experience. The following is a table of the number of through and local passengers on several roads.

TABLE 1:

Roads.	Through.	Way.	Total.
N. Y. and Erie	78,700	1,075,737	1,154,437
Penn. Central	104,000	1,030,908	1,069,740
Baltimore and Ohio	2,313	206,249	208,562
Columbus and Xenia	149,202	35,548	184,750
Little Miami	139,237	152,138	291,371
Hamilton and Dayton	8,247	329,837	338,084
Terre Haute and Rich.	32,155	56,666	88,821
Milwaukie & Miss.	13,866	56,866	70,732
Aggregate	427,720	2,943,999	3,406 387

These results show very great discrepancies in the passenger traffic. But, then differently, can easily be accounted for. For example, the Columbus and Xenia road is only an intermediate link in the great line from Cincinnati to New York. As the population on its borders is sparse, it follows that the mass of its passengers will go over the whole line, between Columbus and Xenia, and such we find to be the fact. But the great and important conclusion to be drawn from the above table is, that only *thirteen per cent. of the whole number of passengers are through passengers.*—If a table were made of all the passenger traffic, on all the railways, it would probably show no greater proportion than this. It is now perfectly established, that the success of a railway *depends upon its local business.* If the country through which a railway passes will not support it, it is in vain to look to other means of profit. The through traffic may be a heavy item on a very short line, but very short lines seldom are, on the whole, as profitable as long ones; for if their business is *through*, the distance is short and the receipts small, while the great expense of the termini must be kept up as if the road was a long one.

Another important inquiry is the proportion of *passengers to a lineal mile* of railway. The following table will show that.

TABLE 2:

Roads.	Miles.	Number to a mile.
New York and Erie	460	2,510
Penn. Central	353	3,030
Baltimore and Ohio	380	550
Columbus and Xenia	54	3,420
Little Miami	84	3,460
Hamilton and Dayton	60	5,633
Terre Haute & Richm'd.	70	1,260
Milwaukie & Mississippi.	80	900
Aggregate	1,541	2,260

In the above table, the Hamilton and Dayton road has by far the most passengers per mile; but only *one-fortieth* part of the passengers on that road are *through* passengers.—The great number of its passengers are derived from the fact that it passes through a densely populated and rich country. On the other hand, the Baltimore road has the smallest number of passengers, arising from the fact, that it traverses a very thinly settled country.

On the Ohio railways the average number of passengers per mile is about 3,000. When—as there soon will be—there are 4,000 miles railway in this state, the number of passengers carried, will be at least *twelve millions.*—The average distance carried will not exceed 35 miles, which, at 2 cents per mile, makes 70 cents each, or *eight millions four hundred thousand dollars!* This is an immense sum to be received on that account, but we doubt not it will be fully realized.

Should the state make 4,000 miles of railway, which at the end of five years is likely to be the case, they will pay an average of at least 8 per cent. permanently, and thus make an excellent investment to their stockholders. Passengers in Ohio, now a very populous state, will be greatly increased by running accommodation trains from the large towns, such as Cincinnati, Columbus, Cleveland, Dayton, Zanesville and Chillicothe. This makes the country equally convenient as the city, and will induce immense numbers to live on the line of the railways.

VETOED.—Gov. Bigler, of Pennsyvania, has vetoed the act of the last session of the Legislature releasing certain railroad and canal companies, from the penalties for violating the law prohibiting the circulation of notes of other states of a less denomination than five dollars. The Pennsylvania, and the Ohio and Pensylvania Railroad Companies allowed themselves to be so seduced, by the conspirators as they allege, into repeated violations of the statute. Suit was then brought against them for the penalties on every violation, the sum swelling np to a considerable amount.—Judgment was given against the companies, and they applied to the Legislature to have the penalties consolidated into one, so that instead of paying thousands of dollars for their folly they would forfeit only a few hundreds. The Governor refuses to give his signature to this act, and the companies will consequentyl be obliged to pay the full amount of the penalties.

Railroads.

ANNUAL REPORT OF THE CINCINNATI, HAMILLON & DAYTON RAILROAD.

We have before us the Fourth Annual Report of this company, the subject of which we analyze below.

The principal elements of the road, presented in the report, are—

Length	60½ miles.
Cost, at present	$2,962,978 32
Cost per mile	49,000 00
Cost of second track (included above).	350,000 00

The *proportions* expended in different parts of the work, are as follows:

First Track	.66
Second Track, in part	.11
Equipment	.14
Real Estate	. 9

The real estate of the company is said to be worth double what it was purchased for.—The cost of the work was obtained thus:

Capital stock	$2,100,000
Mortgage Bonds	862,000

The analysis of business furnishes the following resnlt:

Receipts per passengers	$264,834
Do do freignt	160,369
Do do mails	12,288
Total	$463,021

The proportions are—

From passengers	57	per cent.
Do freight	40	do
Do mails	3	do
Expense of working	$187,207	

The proportions of expense are—

Locomotivo Power	32	per cent.
Train expenses	20	do
Maintaining Way	20	do
Station expenses	17	do
Office expenses	10	do
Machine Shop	1	do
Net receipts of road	$275,814	
Net receipts on cost	9¼	pr. ct.

The analysis of through and local business, presents the following facts:

Through pessengers	8,247
Local do	329,837
Through freight (amount)	$26,008
Local freight	148,133

This is a most curious and extraordinary result, which railway managers should attentively regard, yet its *through* passengers are not 3 per cent! Its *through* freight but 20 per cent! We are not told, (or we hope will be cared for in another report,) what number of passengers entered at each station; but looking to the amount received, we find the average distance carried, to be only half the distance, or 30 miles. We are driven to the conclusion, therefore, that at present, the part of the road between Cincinnati and Hamilton, furnishes the great mass of its business. We are confirmed in this view, by referring to the annual report of the Eaton and Richmond Railroad, from which it appears that a great number of hogs, produce and passengers were brought down that road, the destination of which unquestionably was Cincinnati, and which consequently passed over 27 miles of the Hamilton and Dayton Railroad. The *through* business of the Hamilton and Dayton Railroad will be only largely increased when the Dayton and Michigan Railroad is carried through to Toledo. That would bring the *through* business of one end of the Lake entirely over the Cincinnati, Hamilton and Dayton Railroad, and would make by far, the greatest improvement which can be made to its business. The Indiana business of this road will continue to be almost exclusively carried on the part from Hamilton to Cincinnati.

On the whole, this report shows a strong care for the stockholders, who must continue to have fat dividends.

TENNESSEE, WESTERN & CHARLESTON RAILROAD.

Pursuant to notice, a meeting of the stockholders of the Tennessee, Western and Charleston Railroad Company, was convened at Madisonville, Monroe county, on Monday, the 1st day of May, and the following named gentlemen were elected Directors.

Geo. Brown, Jas. A. Coffin, D. W. Latimore, E. E. Griffith, R. F. Cooke, Thos. J. Young, Jno. King, Jos. Johnston, Wm. M. Stakely, B. McGhee, G. Cannon, W. L. Eakin, J. A. Wright, A. D. Keyes, J. B. Cooke.

On Tuesday the Direi tory met and elected Geo. Brown, Esq., of Madisonville, President of the Company, and Wm. M. Stakeley, Esq,, Secretary and Treasurer.

This road is designed as a branch of the Rabun Gap Road—or rather an extension of that road to make the connection with the road terminating at Chattanooga.

From Madisonville to the natural and proper point for intersection, with the East Tennessee and Georgia Road, a route can be obtained over a very favorable country for a railroad at a distance of fifteen miles—making only thirty miles to be built to perfect a connection with the system of roads, completed and in course of construction, terminating and in intersecting at Chattanooga. Also the most suitable point for the Tennessee, Western and Charleston Railroad to cross or intersect the East Tennessee and Georgia Railroad, and the distance, by estimation, from such point to the town of Madisonville.

DAMAGES AGAINST A RAILROAD.—We learn from the Worcester Spy, that in the case of Jonathan C. Richmoad vs. the Providence and Worcester Railroad, for damages received by the collision near Valley Falls, last Autumn, the jury rendered a verdict for the plaintiff in the sum of $3,394 damages. The amount of damages claimed was ten thousand dollars, but the court decided that there was no statute under which a man could recover damages for the death of his wife. The Spy adds that the claims for damages resulting from the accident in August last are now all satisfactory settled, at a cost to the corporation of about $30,000.

CINCINNATI RAILWAY CONNECTIONS WITH THE SOUTH AND SOUTH-WEST.

We found among our papers the following valuable table, prepared by some friend to whom we would give credit if we only knew whom he was:

Railway Connections secured to Cincinnati by the Construction of the Cincinnati, Danville, Ky., and Knoxville, Tenn., Railroad.

Names of Roads	Max grade per mile.--feet	No of miles completed.	No of miles in progress	No of miles unprovided for	Total No miles
Cincinnati and Lexington, Ky.	—	50	44	—	94
Lexington and Danville, Ky.	—	—	36	—	36
Danville and Knoxville, Tenn.	60 up 47 down	—	—	140	140
East Tennessee and Georgia, to Dalton, Ga.	36	82	28	—	110
Do do Branch to Chattanooga	—	—	—	30	30
Western & Atlantic--Chattanooga to Atlanta.	33	140	—	—	140
Dalton and Jacksonville, Ala.	—	—	—	80	80
Selma, or Alabama and Tennessee River.	40	60	80	—	140
Selma and New Orleans.	—	—	—	300	300
Nashville and Chattanooga.	106	113	40	—	153
Memphis and Charleston.	—	100	220	—	320
Mobile and Ohio, south of Memphis and Charleston Junction.	—	40	335	—	375
Nashville and New Orleans, from Tuscumbia to Jackson.	—	—	—	247	247
New Orleans and Jackson.	—	—	220	—	220
Atlanta and Lagrange, Ga., to West Point.	—	87	—	—	87
West Point and Montgomery, Ala.	—	88	—	—	88
Montgomery, Ala. and Pensacola, Fa.	—	—	170	—	170
Macon and Western, Atlanta to Macon, Ga.	36	102	—	—	102
Georgia Central, Macon to Savannah.	33	192	—	—	192
Milledgeville and Gordon.	—	17	—	—	17
Georgia South Western, Macon to Ogethorpe.	40	50	—	—	50
Muscogee, Fort Valley, on S. W. RR. to Columbus	—	50	30	—	80
Georgia Railroad, to Augusta, Ga.	36	172	—	—	172
Do do Athens Branch.	36	40	—	—	40
Augusta and Waynesboro'.	—	21	30	—	51
Augusta and Charleston, S. C.	40	137	—	—	137
Other roads of South Carolina	—	200	100	—	300
Rabun Gap, or Blue Ridge Railroad. Knoxville Tenn., to Anderson C. H. S. C.	—	—	—	150	150
East Tenn. & Va. RR., Knoxville to Va line.	68	—	130	—	130
Virginia and East Tennessee Railroad. Tennessee line to Lynchburg, Va.	68	80	124	—	204
Lynchburg, to Richmond, Petersburg & Norfolk	—	200	200	—	400
Lynchburgh to Alexandria, Va.	—	—	225	—	225
Totals.		2021	2012	947	4980

The above roads are all first class roads laid with heavy rails, and all, south of Lynchburg, Va., with a gauge of 5 feet.

RECAPITULATION:

Total number of miles completed and in operation	1,981
Do do do in progress and provided for	2,052
Do do do in contemplation	947
Total	4,980

The distance from Cincinnati to all uf the above named points, except Memphis, Nashville and New Orleans, southerly, and Richmond, Norfolk and Alexandria, easterly, is many miles shurter than by any other line of railroads, now attracting public attention, and to these points the saving effected by other lines, is believed not to exceed 60 miles. From Cincinnati to Pensacola the distance is less than it is to any point on the Gulf uf Mexico, by any other route.

Railroad Earnings.

April, 1853--4.

EASTERN:

Name of Roads.	Miles.	1854.	1853.	Increase.	Per Cent.

We regret that we have not been able to present a more extended table of Earnings uf last month; but our utmost exertions have not succeeded in collecting more than here giv n. We had hoped that our railruad friends would have taken some pains to forward statements of receipts, but they have not done so, and we have been compelled to gather the items from such sources as we could.

The increase in the Earnings of April, this year, over those of the same month last year, is quite large, and is very encouraging to railway enterprize.

The Chicago and Rock Island road shows a heavy increase, which is, in a measure, accounted for by the fact that last year it was running but a short distance, while now it is completed through to the Mississippi River. The increase upon the Cleveland and Toledo ruad is also heavy, and is owing, in part, to the fact that the Southern Division only was in operation in April of last year; now both are running.

From this table we gather that upon 1,434 miles of Eastern roads, the increase for the month, over that of last year, has been 11.32 per cent. per mile. Upon 1,330 miles of Western roads, the increase has been 48.57 per cent. per mile.

DANVILLE AND KNOXVILLE RAILROAD.—The report of M. B. Prichard, Esq., who surveyed the line of the proposed railroad from Knoxville, Tenn., is published in the Knoxville Register. The Kentucky part of the line, fixed upon as the most practicable, by Mr. P. passses about 5 miles west of London, 13 miles east of Sumerset, 8 west of Mt. Vernon, 5 miles west of Crab Orchard to Sanford, thence to Danville. The total length of the located line will be 145 miles, 60 miles in Tennessee and 85 miles in Kentucky. The maximum grade 50 feet per mile. The total estimated cost frum Danville to Knoxville is $4,284,651 42—giving an average of about $28,550 per mile—or a cost per mile of $32,000 for the road equipped in full working order.

Meeting of the Stockholdres of the Penn. Railway.

PHILADELPHIA, May 22.

At a meeting of the stockholders of the Pennsylvania Railway this morning, the directors submitted a report relative to the purchase uf the main line, stating that nearly three millions would be required for the renewal and repairs of the ruad, and estimating the total value at only seven millions, and advises not to purchase the road at ten millions, being the price fixed by the Legislature.—The report was referred to a committee of the stockholders to report two weeks hence.

The committee of directors which visited Chicago, relative to the proposed assistance to Chicago ruads, reported in favor of the endorsement of the bonds of the Ohiu and Indiana, and Fort Wayne and Chicago Railways, to the amount of half a million each, but a resolution was adopted, stating that in the absence of any authority from the Legislature, and owing to the present financial difficulties of the country, the measure was inexpedient at present.

SUSPENSION BRIDGE OVER THE KENTUCKY RIVER, ON THE LINE OF THE LEXINGTON AND DANVILLE RAILROAD.

We herewith give the conclusion of the article on Suspension Bridges, from the Lexington *Observer and Reporter*. It is a very complete exposition of the feasibility of this plan for bridges on the lines of railways, and dsmonstrates beyond a shadow of doubt, that they can be made amply strong and rigid, for all transportation purposes.

Suspension Bridges---No. 4.

In my last article under this head, I endeavored to explain in as few words as the subject admitted, the plan of construction of the Kentucky River Suspension Bridge, on the Lexington and Danville Railroad. In such a description many matters of detail are necessarily omitted, as to explain them understandingly would require the aid of engraving.—Enough has been given, I trust, to enable such as take an interest in the subject, to form some idea of the magnitude and character of the work, upon the success of which rests very materially the reputation of its designer and constructor, John A. Roebling—the railroad company who have adopted it—and their engineer who advised it.

We will procced now to estimate its strength. The two cables together consist of 9203 No. 9 charcoal iron wire, manufactursd with great care for this especial purpose. Each wire has an ultimate strength of over 1650 lbs., or in the aggregate, a strength of 6783 gross tons. Added to this the 40 over floor stays attached at intervals, as previously described, to the platform of the bridge, and to the saddles at the top of the towers, formed of the same quantity of wire, and estimated at one-seventh of the cables, will give as the sustaining power of the bridge, or rather the strain necessary to cause a rupture in the 'suspension' of tbe bridge of 7753 gross tons. The deflexion of the cables is 1.14, and the co-efficient of tension will be 1.83, that is to say a load of one ton at the center of the bridge will cause a strain on the cables at the point of suspension of 1.83 tons. If then the weight of the cables and platform, together with the maximum load, be multiplied by 1.83 we will have the tension or strain on the cables and overflow stays. The bridge and cables are estimated to weigh *suspended* 522 tons, (60 tons at the least, being sustained by the abutments,) the maximum load has been taken at 283 tons, to which we will add one-fifth, or 56 tons for the effect of a moving weight, this will be an ample allowance, as the rails over the bridge will be without a joint, and therefore the movement of a train over the bridge will not be attended with any sudden jar or jolt. The whole maximum load then will never exceed 861 tons—multiply this by the factor of tension (1.83) and we will have as the strain on the cables and overfloor stays, an amount not greater than 1567 tons, whilst their aggregate strength is as we have seen, 7743 tons, or about five times as great.

Fears have been expressed by those who have not examined the subject, that the towers from the apparent slightness of their proportions will be liable to overturning, or to be ruptured in some way. To show how little ground there is for this opinion, we will examine them under two views. First, upon the supposition that the towers are so well bonded as to resist, as a solid mass by turning upon their edges, and secondly that any of the courses of masonry slide on their beds.

If a wire be suspended over the top of a pole, and each end be brought towards the ground, so long as the two loops of wire make equal angles with the pole, there exists no tendency to overset the pole, let the weight be as it may; but if, while in this condition, one loop of the wire be fastened, and an additional weight be added to the other loop, producing a movement of the wire over the top of the pole, so long as the angle of the wire remains the same, the tendency to overset the pole will be measured by the friction of the wire at its top—that is to say, if the wire could move without friction over the top of the pole and preserve the same angle on each side, there still would be no tendency to overthrow it.

The diurnal movemeut of the cables in midsummer from the effects of change of temperature will not exceed at the top of tbe towers 1¼ inches. If to this be added the elongation caused by the maximum load, we shall have as the extreme movement to be provided for 2⅜ inches. Now the difference in the angles which the main and land cables form with a perpendicular at their point of suspension caused by this additional deflexion in the main cables, is but about *three minutes of a degree*—a quantity so slight that the difference of the resultant of pressures falls far within the base of the towers and in consequence produces no tendency to overset tbem, or to slide the courses of stone on their bed.

The free motion of the cables over the tops of the towers is resisted by the friction of the rollers on the under side of the saddles and the tops of the bed plates. The friction of two rubbing surfaces is in proportion to their weight, and various experiments bave shown this to be about 13 per cent. of the weight, when no unguent was interposed, but in this case we have in addition, by the intervention of the rollers, a rubbing friction converted into a rolling friction; this lesesns the friction still more, as may be illustrated in the case of a car on a railroad, where to fix the wheels and drag it over the rails will require a force of 380 lbs. to each ton of weight, (or 1-6,) whereas the wheels being free to revolve, it may be drawn by a force of 8 lbs. (or 1-280ths.) to the ton. We will consider the friction at the top of the tower to be 320 lbs. to the ton, or 1-7th of the weigbt.

The weight of suspension on the towers is as we have seen, 861 tons, one half of which (weight on the side) is 430 tons, 1-7th of which is 61 tons. The tendency to overset towers is this force of 61 tons acting with a leverage of the hight of towers, or 86 feet represented by the product of 68 × 86=5246; while the stability of the towers is represented by the weight upon their bases acting with a leverage of half the length of their bases, or 3430 tons by 12¼ feet=41.160 or over 8 times as great as the disturbing force.

To examine the resistance to sliding of any course of stone of which the towers are composed, the top course for instance, we have but to consider the friction of stone sliding upon stone. The upper course measures 7 feet by 8, or 56 square feet, and we will, for the argument, suppose that neither the bond, cement nor towers connecting tbese courses offer any resistance to this sliding; but that the friction of the stone is the sole opposing force.

The friction of this stone may, from the results of many experiments, be taken at 7-10ths of the weight, which as we have seen, is for one side, 430 tons, 7-10ths of which is 301 tons, whilst the friction of the cables which measures the horizontal force tending so slide the top course, is but 61 tons.

These calculations must be entirely satisfactory so far as the dimensions and proportions of the parts of the bridge are concerned; there only remains to satisfy ourselves of the character of the material used.

The iron is the best quality of charcoal iron, and samples are taken at random and tested by every means which will show any defect in its structure.

It is not safe to prove the structure or its parts, to, or anywhere approacbing the limit of its strength, for the very proof itself may have sensibly injured tbe material. The only course is to ensure extreme care in the manufacture, by procuring the materiai of manufacturers of known reputation—paying the price of the best material—with the privilege of rejecting it in the event of any of it after testing not proving up to the standard.—These precautions are all used in the selection of iron for this bridge, and every lot of iron is subjected to a rigid proof—specimens of the iron used, taken at random, may be seen at the railroad office in tbis city, worked and broken when cold, showing a most wonderful tenacity, and justifying, by the severe tests it has undergone, every confidence in the character of the iron.

The towers on the north bank of the river are rapidly approaching completion, the anchors and cbains on this side being already in place. The towers on the south bank are but commenced, and to be finished by tbe 1st of January, 1855, when tbe operation of stretching the wire will be commenced.

The builder of this bridge, Mr. John A. Roebling, is likewise engaged in constructing one of 800 feet span over the Niagara river in Canada, designed for both railroad and common travel. It is expected it will be opened the coming summer or fall, so that the suitableness of this description of bridge for railroad travel, will be tested by some months use before the opening of the Lexington and Danville Railroad, wbich will not take place under sixteen months from this time.

We hear a good deal of tbe tubular system of bridge building for long spans. All ws can say of it in this place is, that for every one hundred thousand dollars which this suspension bridge will cost, the tubular bridge would cost a million of dollars. If then the suspension bridge can be made to serve tbe purpose of railroad travel, of which tbere can be no question, a great step is taken in engineering science, and one that will be of incalculable benefit in our country of wide rivers, and shall we say—sballow pockets.

JULIUS W. ADAMS.

THE LAKE ERIE, WABASH AND ST. LOUIS RAILROAD.—The work on this great route is being pushed with great activity, and we are assured that it will be put in operation between here and Fort Wayne before snow flies. The cantractors are at work along the whole line, and we understand the payments for labor are $110,000 per month. Ten thousand tons of iron, much more than enough to reach Fort Wayne, are bought and paid for, and a large share of it delivered. We naturally feel a great interest in this route, inasmuch as its business so exclusively will be concentrated at Toledo. The works here at the terminus will be constructed with all possible dispatch.—*Toledo Blade.*

A NEW RAILWAY PROJECT.

The Reflector contains a notice of a meeting of the citizens of Norwalk, Huron county, called to further the project of a railroad from Cleveland to Tiffin, via the former place. The gentlemen present unanimously resolved upon prosecuting this work as an independent line, having no connection with the so-called Cleveland and St. Louis Road, it being understood, we infer, that the design of making Norwalk a point in the latter has been abandoned.—Messrs. G. G. Baker, C. L. Latimer, S. T. Worcester, Henry Brown and John Tift, were named a committee to prepare articles of association and make other arrangements to initiate the enterprise.

It is understood that the citizens of Milan have succeeded in procuring the requisite subscription of stock to the Cleveland and St. Louis Railroad, as to secure the location thro' that place. If we have been rightly informed, the whole amount now subscribed is $250,000, of which the major part has been taken in Milan township. Some of its more wealthy citizens have subscribed $10,000 each.—Such energy and perseverance deserves success.

If these projects are consummated, the counties of Huron and Erie will be pretty essentially *ironed over*. Three railroads diverging from Sandusky, already pass through them in southerly direction, viz: the Sandusky, Mansfield and Newark, and the Mad River and Lake Erie, the former having a branch to Huron, (the Huron and Oxford,) and the Sandusky and Indiana, and there are three lines traversing the territory formerly composing Huron county, in a direction from east to west, viz: the Lake Shore, or Junction, the Toledo, Norwalk and Cleveland, and the Cleveland Columbus and Cincinnati; the direction af the latter being rather south-westerly. The addition of two more roads will provide pretty effectually for the present business of the territory, whatever may be said of its future wants.—*Sandusky Commercial Register.*

PECUNIARY RESPONSIBILITY OF RAILROADS.—At a meeting of the New York and New Haven Railroad Company recently held, the President stated that two hundred and fifty thousand dollars had already been paid, and that a further sum of fifty thousand dollars yet remained to be paid by the company, for damages to life and limb by the Norwalk disaster of May 7, 1853. The number of deaths on the instant was about fifty-four, and the serious injuries not resulting in death, but for which the company were made liable, were probably half as many more. Only one suit was suffered to be prosecuted to judgment against the company, and that arose from a disagreement as to the extent of injury. The amount of damages incurred by this company in consequence of this accident has been a lesson both to it and other companies, and its effect has been to render railroad travel safer than heretofore.

☞ A new emission of three cent pieces has taken place. They are of pure silver and are distinguished from the old ones by having a palm leaf over the III's and a sheaf underneath.

GREEN BAY & MINNESOTA RAILROAD.

The Minnesota Pioneer says: "A company has been organized under a charter granted by the Legislature of the state of Wisconsin, and the amount of capital stock necessary to enable it to commence operations, actually taken and the per centage paid. The corporators are well known in Wisconsin as men of wealth, and of the highest official and personal standing. J. E. McKusick, Esq., of Stillwater, President of the company.

Surveys have already been made of routes west from Green Bay to some distance this side the Wisconsin river, and the country is reported as admirably adapted to the building of a railroad. A competent surveyor, now engaged on the Grand Trunk (Canada) Railroad, is soon to take charge of the survey of the whole distance, and various routes will be examined and the most feasible adopted. Interest has been made with the Grand Trunk road, whose line is in operation from Montreal to Portland, and through that company negotiations have been opened with English capitalists, which, it is confidently anticipated, will prove successful.

A road is now in progress of construction from Georgian Bay to Toronto, which, connecting with the Grand Trunk line, furnishes an almost entire railway communication from St. Paul to the Atlantic coast in a direct eastern line. The only water travel will be from Green Bay to Pentangushine. This line will bring St. Paul within ten hours of Lake Michigan, and fifty-six hours of Toronto. The President urges upon the people of Minnesota the necessity of co-operation, and he is sanguine that the united efforts of capitalists at each terminus, and with the help of communities along the route, the road can at once be placed in process of construction. He recommends that a subscription be taken immediately to defray the expenses of a thorough survey.

EVANSVILLE, INDIANAPOLIS AND CLEVELAND SHORT LINE RAILROAD.—On last Thursday, 11th inst., Oliver H. Smith, Williard Carpenter, Franklin Hardin, James W. Cockrum, John Love, Jeremiah Smith, Henry D. Allis, Alexander Leslie, James Cosby, John H. Johnson, and William Mason, were elected Directors of this company. Oliver H. Smith was unanimously re-elected President; Williard Carpenter, Vice President; James Green, Secretary and Treasurer, and Henry C. Moore, Chief Engineer.

We are informed that the Board, at their late session, contracted wtih Williard Carpenter & Co., to construct the Straight Line Railroad, from Evansville to Indianapolis, in continuous sections, by the 1st of December, 1854.

Messrs. Carpenter and Love, resigned their offices as Directors, and John Law of Evansville, and William F. Weld, of Boston, were appointed to fill the vacancies. Henry D. Allis, of Evansville, was appointed Vice President, to fill the vacancy in that office caused by the resignation of Mr. Carpenter. The work, we learn, will progress with increased energy.

RAILROADS IN ALABAMA.—Charters for fourteen new and different railroads were granted by the last Legislature, and the charters of eight others amended.

The fourteen new roads are the following:

The Northeast and Southwest, from some point on the Mobile and Ohio railroad, by Livingston and Tuscaloosa and through the northeast part of the state towards Knoxville, Tenn.

The Tennessee and Alabama Central Railroad, from Montevallo north in the direction of Nashaille.

The Greensboro' and Uniontown road.

The South and North Alabama road from Montgomery to Guntersville.

The Wetumpka and and Montevallo road.

The East and West railroad, from Girard to Selma.

The Northwestern road from Selma to intersect the Memphis and Charleston road at some point in Mississippi.

The Western railroad from Montgomery to the Mississippi.

The Alabama and East Tennessee road from Jacksonville northeast to the state line.

The Selma and Mobile road from Selma to some point on the Girard and Mobile road.

The Beard's Bluff and Elyton road.

The Opelika and Talladega road.

The West Point and Tennessee road from West Point to the Charleston and Memphis road.

The Greenville road from Greenville to some point on the Girard railroad.

The following are the eight whose charters were amended:

The Alabama and Florida road from Montgomery to Pennsacola.

The Gainesville and Mississippi road.

The Tennessee and Noxubee road.

The Mobile and New Orleans road.

The Girard and Mobile road.

The Marion and Alabama river road.

The Lafayette Branch road from Lafayette to Opelika.

The Coosa and Chattooga road.—*Selma Reporter.*

NEW RAILROAD PROJECT.—We understand that there has lately been organized a company for the purpose of constructing a railroad from Lima, Ohio, by the way of Marion and Kokomo to Lafayette, Indiana, by the name of the "Ohio, Indiana and Illinois Railroad Company." John M. Wallace, Esq., President, and James A Stretch, Secretary.

We are informed that the company is in a flourishing condition, and the line is thought to be a very good one, connecting as it will at Lima, Ohio, with the Ohio and Indiana Railroad running east to Crestline, and there connecting with the Ohio and Pennsylvania Railroad, running direct to Pittsburgh, Philadelphia and New York, and at Lafayette with a road now in progress running west to Peoria and Burlington, Illinois, forming a very direct Eastern and Western outlet for a large, fertile and productive country in Indiana, of fifty miles in width which is unprovided with any railroad directly East or West.—*Indiana State Journal.*

THE WHEELING SUSPENSION BRIDGE.—The Wheeling Argus of Wednesday evening, 17th, gives the following particulars of the destruction of the Suspension bridge:

During the entire day we have had the most terrific gale ever known in this city, many roofs and chimneys were more or less injured before noon, and at two o'clock the Suspension bridge had acquired a vibratory motion which caused most passengers to hesitate and turn back, fearing to cross it. At about 3 o'clock the direction of the wind changed, and the motion of the bridge commenced losing its regularity, the rocking, jerking and twisting becoming more violent until at 3 o'clock precisely, the wood work at the middle of the bridge turned nearly bottom upward, and with a heave, a terrific surge and a tremendous noise, ten of the cables broke from their anchorage at the east end, and the entire span sank together into the water. One of the stone erections at the city end of the bridge, for the protection of the anchorage from the weather was almost entirely demolished; some of the large stones being thrown twenty or thirty or thirty feet into the street. A more perfect wreck, or a more lamentable record we were never before called upon to make.

No person seems to have been on the bridge at the time, nor indeed, for several minutes before the occurrence. A little daughter of Mr. Lukens, from the Island, was standing near the toll-house, and was considerably injured either by one of the cables, or pieces of the toll-house, which is completely demolished.

NEW MACHINE FOR BENDING SHIP-KNEES.—The Ship Timber Bending Company exhibited on Saturday the operation of a new model machine, invented by Mr. Blanchard, for bending ships' knees and futtocks by which shorter and more perfect curves are obtained than by his greater machines for bending timber, to which, in fact, it is supplementary. A piece of oak, steamed for twenty miuutes to the inch was fixed in the model, the end pressure applied, and at the point where the wished for curve is to be obtained two brass circular flanges or fenders are fixed, which prevents the fibres of the bending timbers from bulging outward, while they are more firmly forced into one another as the machine is turning, and the pressure is working at both ends. Thus shorter and more perfect curves are obtained. The ship-knees are bent to a perfect right angle, which is an advantage never before obtained. Any angle less than a right angle can be obtained by the same machine, merely by varying the application of the cross-tie which fixes it the desired curve or angle. The curved timber is rendered much stronger, the inside of the curve being forced into one-fourth of the length of the timber previous to bending, while the outside of it is unchanged. One inch is thus compressed into a quarter of an inch giving increased strength or power of resistance as the result, which alone is of immense importance in ship building, while the cost of ship building will be reduced.—*N. Y. Herald.*

COVINGTON AND LEXINGTON RAILROAD.—This road is now completed and opened to Cynthiana. The cars commenced running regularly on Saturday last. Thursday, the 25th inst., is fixed upon by the citizens of Cynthiana for a grand barbacue to celebrate the completion of the road to that point.

CLEVELAND, ZANESVILLE AND CINCINNATI RAILROAD.—The Cleveland Leader says:

Our citizens will be gratified to learn that County Commissioners of Muskingdom, and the city Council of Zanesville, have nobly responded to the action of this city by appropriating $235,000 of their public stocks towards the construction of the Cleveland, Zanesville & Cincinnati road. This $235,000 will be increased to $400,000 by the people along the line, between Millersburg and Zanesville.

No other road in Ohio passes through so many county seats and strong commercial centers. Commencing at Cleveland it takes in its course Hudson, Cuyahoga Falls, Akron, Clinton, Millersburg, Coshocton, Roscoe, Dresden, Zanesville, Somerset, Lancaster, Circlevilie, Washington, Wilmington, Morrow and Cincinnati.

We have much confidence that this road will transport more produce to Cleveland, than any other leading to this city. The road is open to Millersburg, and there remains now but a short link of 55 miles to complete, and the whole line will be open. Not a day should be lost.

SANDUSKY, MANSFIELD AND NEWARK RAILROAD.—From the New York Tribune we learn that this company has succeeded in funding its floating debt, and that the exchange of its consolidated bonds is being made for the bonds of the several old companies, of which the new company is composed. This we learn will enable the company to pay regular dividends from its earnings hereafter.

We learn also that the Scioto and Hocking Valley Railroad Company, which is an extension of the above road, is vigorously prosecuting its work to completion, and when completed, the mineral agricultural and commercial resources of the country traversed, in addition to the through business, will make this whole line among the most important in Ohio.

OBITUARY.—From the Southern Advocate, published at Huntsville, Ala., we learn with regret, the death of Col. A. E. Mills, late President of the Memphis and Charleston Railroad Company. He died on the 11th inst, very suddenly and unexpectedly, at the early age of 41. He had been a resident of Huntsville for the last 22 years, and President of the Memphis and Charleston Railroad Co., until the last election of the Board, when he resigned. His loss is sincerely deplored by his numerous friends.

HARLEM RAILROAD BONDS.—The New York Tribune states that the bids for $1,700,000 of the Mortgage Bonds of the Harlem Railroad Company were opened on Wednesday, at the office of Messrs. Blatchford & Rainsford. The whole amount of bids was about $2,000,000, ranging from 90 to 95 27-100. The whole amount was awarded at 92 33-100@95 27-100.

TOLEDO AND INDIANAPOLIS RAILROAD.—The length of this road, between its termini is about 195 miles, with a total curvature not exceeding two per cent of its length; its grades are very light, the maximum being 20 feet to the mile, and but three miles of this; between 10 and 20 feet five miles, under 10 feet, seventy-four miles.

At the distance of twenty-five miles from Toledo, it connects with the Toledo and Illinois Railroad, thence deflecting southwesterly it crosses the Maumee at Gilead, passing through the counties of Lucas, Wood, Putnam, Henry, Allen, Van Wert and Mercer, and through the towns of Whitehouse, Providence, Gilead, Medary, Kalida, Fort Jennings, Delphos and Shanesville. In addition to these points, the country will require and make important stations at Blanchard's Fork Crossing; Jenning's Prairie and the State Line. In this distance, beside the above connection, it will cross the Tiffin and Fort Wayne Railroad, Ohio and Indiana, Fremont and Fort Wayne, Cincinnati and Mackinaw, and Cleveland and St. Lonis. In Indiana it will pass through Portland and connect at Muncie with the Bellefontaine road, thus opening a direct road between two important points.

CREDIT—FAIR PLAY.—The leader of our issue of the 27th ult., "*Profits and Value of Western Railways,*" we find copied into the Weekly *Ohio State Journal* of the 23d inst., without a word of credit. The Cincinnati *Daily Times* of the 23d inst., has the same article, just as it appears in the *Journal*, without a credit to any one. Our table of Railroad Earnings, for March, collected with much pains from a good many sources, was copied into a prominent Eastern railroad paper not only without credit, but with the remark that it was "a resume of what had already appeared in that paper in detail," whereas many of the items of that table had never, previously, appeared in that sheet.

We are pleased to have the original articles of the *Record* copied far and wide, the more they are circulated, the better do we like it; but we would also like to have due credit given. "The laborer is worthy of his hire."

RAILROAD LAW.—The Zanesville *Courier* says Judge Stilwell decided on Wednesday last that Railroad Companies were not liable for damages to persons who were injured by getting off or on the cars while in motion. Suit was brought against C. O. Railroad Company, by an individual who had his leg broken in an attempt to get upon the cars.

LEXINGTON AND DANVILLE RAILROAD.—James S. Hopkins, Esq., has resigned the Presidency of this company, in consequence of private affairs. Gen. Leslie Coombs has been unanimously elected to the vacancy.

THE GREAT TUNNEL OF CINCINNATI.—We learn that the work on the great tunnel will be re-commenced, on Monday next. It is understood, that the means have been raised to continue the work, with a strong force.

We visited the tunnel a day or two since, and found the work, as far as advanced, well done, and the whole undertaking one of great enterprise. It will be a grand thing, when done, and of great utility too. The advantage of having a passenger depot, on the upper plain of the city, is obvious; and there will be a still greater advantage in having the delivery of coal on that level.

The prospects of the tunnel are now good, and we hope it may be early completed. It will not only provide a new entrance into the city; but will be a splendid monument to the ability and energy of Western men.

WATERTOWN AND MADISON RAILWAY.—The Madison *Democrat* says: "At the preliminary meeting for the organization of this Railroad Company, the following Directors were chosen: Wm. M. Dennis, Luther A. Cole, Daniel Jones, A. L. Prichard, Patrick Rogan, Simeon Ford, Peter V. Brown, Dennis Dougherty, Benjamin Granger William A. Barstow, Philo Dunning, A. M. Hanchett, Andrew Proudfit.

The following were elected officers of the Company: President Wm. M. Dennis; Secretary, Benjamin Granger; Treasurer, Patrick Rogan.

A survey of the route was ordered, and a committee appointed to negotiate a consolidation, or connection with the Milwaukee and Watertown Railroad.

DAYTON, XENIA AND BELPRE RAILROAD.—On Saturday evening, May 13th, the track of the Dayton and Xenia Railroad was completed, except 2,800 feet a short distance from Dayton. The iron provided for the work fell this much short of the amount needed, and the sufficiency will have to be supplied by a new purchase, or by borrowing temporarily. The track will be completed by Thursday, or at the furthest by the close of the present week.

CINCINNATI AND MARIETTA RAILROAD.—Last week, the City Council of Cincinnati loaned this Company the $150,000, voted by the citizens two or three years since. This will aid much in the completion of the road between this city, and the coal fields. We understand the work is rapidly advancing between Greenfield and Blanchester, and in two months the line will probably be opened from Chilicothe to Cincinnati, and in a short time after to Hamden, Vinton county.

HEMPFIELD SUBSCRIPTION.—The recent vote at Wheeling, on the question of that city subscribing $250,000 to the capital stock of the Hempfield Railroad Company stood, for subscription, 893; against, 85.

SCIOTO AND HOCKING VALLEY RAILROAD.—The election of Directors for this road took place in Portsmouth, May 10th. The following gentlemen were chosen: C. A. M. Damarin, P. Kinney, J. Riggs, J. L. McVey, W. Kinney of Portsmouth; and J. Westfall, of Jackson; T. B. Davis, of Vinton; F. Case, of Hocking; E. A. Spencer, of Perry.

At a meeting of the Directory these gentlemen are chosen as officers of the road for the ensuing year: President C. A. M. Damarin; Superintendent, J. W. Webb; Treasurer, P. Kinney; Secretary, John McDowell.

OHIO AND MISSISSIPPI RAILROAD.—So far, the business on the short piece of this road completed, from Cincinnati to Aurora, has much exceeded expectations. In a month more, the work will be completed to the Jeffersonville Railroad, making a complete line of railway between Cincinnati and Louisville. The traffic on this part of the road will then be immense, and the profits of the work commence.

PATENT AXLE BOXES FOR RAILROAD CARS.—We would call attention to *Lightner's Patent Axle Boxes*, as described in our advertising columns. The testimonials given speak in high terms of the superior quality of these boxes for the purposes for which they are intended. We commend them to car builders, railroad companies and others interested.

HILLSBORO' AND CINCINNATI RAILROAD.—The election of officers resulted as follows: President, Samuel B. Keys; Secretary, Daniel J. Fallis; Solicitor, Alphonso Taft.

On further motion, Samuel B. Keys, Esq., and Daniel J. Fallis were appointed a committee to act jointly with a like committee of the Marietta and Cincinnati Railroad Company under the contract of union.

URBANA, FINDLAY & DETROIT RAILROAD.—At a meeting of the stockholders of this road, held at Findlay, on the 10th inst., the following gentlemen were elected Directors: Edson Goit, Parlee Carlin, Frederick Henderson, Samuel Howard, Collister Haskins, John Ewing and Henry Brown. The Board met and elected John Ewing President, and William Taylor, Treasurer and Secretary.

CLEVELAND AND LOUISVILLE RAILROAD.—The organization of this Company is now complete.

Wm. J. Thomas, of Troy, Miami county, is the President; G. D. Burgess, H. W. Culbertson, of Troy, O. Hays, J. M. Glover, of West Liberty, and John A. Foot, of Cleveland, are Directors; John B. Fish, of Springfield, is Engineer.

HANNIBAL AND PEORIA RAILROAD, ILLINOIS.—Schuyler county, in Illinois, has voted to subscribe $75,000 in bonds, in aid of this extension of the Hannibal and St. Joseph road through the state of Illinois.

RAILWAY CONVENTION.—The general convention of the officers of Railway Companies, between New York and Montgomery, Ala., met in Baltimore, on the 19th ult., at Barnum's. Nineteen companies from all parts of the country were represented.

Resolutions were adopted unanimousiy, that the companies represented would not submit, under any circumstances, to the terms of compensation for carrying the United States' Mail, indicated by the Postoffice Department in the bill now before Congress.

A committee to memorialize Congress on the subject was appointed.

OHIO & INDIANA RAILROAD.—We understand that this road will be completed, in the course of the present week, as far as Delphos. The contractors are hurrying up the work. The Cincinnati, Hamilton and Dayton, and the Mad River and Lake Erie roads have made arrangements by which the cars of the latter Compeny run over the eastern section of this road from Forrest, the junction, to Crestline, thus opening a through line to Pittsburgh, from Cincinnati, over the above-named roads. Fare and time the same as over the Little Miami road.

CLEVELAND, MEDINA & TUSCARAWAS RAILROAD.—This road is now going ahead with energy, and with the opening of spring, new confidence has been inspired in its success. Considerable amounts of stock have recently been subscribed at this place, Cleveland, Dalton, and all along the road, and several persons here have disposed of their stock at par. Before the season closes, we may expect to hear the trains thundering into our village.—*Medina Gaz.*

ACKNOWLEDGMENTS.

DEBOW'S REVIEW: INDUSTRIAL RESOURCES, ETC.—The April number of this valuable valuable statistical journal has been received some days. Its table of contents is varied and interesting, embracing Statistics, Geography, History, etc., of the Union.

This is one of the most valuable serials published in this country, and should find an extensive circulation. Terms, $5 per annum.

JOURNAL OF FRANKLIN INSTITUTE OF PENNSYLVANIA, for the promotion of the Mechanic Arts. Devoted to Mechanical and Physical Science, Civil Engineering, the Arts, Manufactures, etc. Edited by J. F. Frazer, assisted by a committee of the Franklin Institute.

The May number of this valuable scientific journal is at hand, containing a great variety of useful and entertaining matter for scientific and mechanical men. Terms $5 per annum, free of postage if paid in advance.

PRACTICAL MECHANICS' JOURNAL: No. 1, Vol. 7., being the May, 1854, number of this valuable serial, which is a reprint of the Edinburgh Journal of the same name. The American publishers have made arrangements to devote a portion of each issue hereafter to *American* inventions, and scientific and engineering subjects, by which its value will be much enhanced. Stringer & Townsend, New York, are the publishers. Terms $3 per annum.

TABLE OF RAILROAD BONDS, WITH MARKET VALUE.

CORRECTED TO WEDNESDAY OF EACH WEEK.

MONETARY.

At the East the Money Market has been easier for the past week than at any time for some months past. The banks are discounting freely; the mercantile community is less pressed for means, and the heavy payments of the month have been easily met.

Loans on call can be had at even less than legal rates, this mode of investment being preferred to mercantile paper, as the funds can be realized at any moment.--Short paper, best namos, is in demand at rates from 8 to 9 per cent. Less known paper at 9 @ 10 per cent. Railroad securities are heavy, unless of the class of paying roads. The bank returns of the week show diminished payments with a marked increase in actual deposits.

The doubts engendered by the European War have worn off, and the only fear now is that it may cause an inconveniently large drain of the precious metals from this country; nevertheless the receipts of gold from California are still in advance of the Foreign shipment.

Foreign Exchange is dull at 109¾ for best names.

The Stock Market has been variable throughout the week; the advahee of the previous week was not sustained; investment stocks are selling very low, and the market is heavy. The feeling seems adverse to the mass of railroad bonds, so plenty at this time in market, the most of which represent only work paid for by those very bonds. Roads with paid up subscriptions or having land grants as securities fare better, yet all are dull at this time.

The sales of stocks for the week have been as follows:

At the West we have to note a slight improvement in monetary affairs, naturally consequent upon the improvemens at the East; still the stringency has not been entirely removed; paper, other than "number one," is difficult of negotiation, at about 1 per cent. per month.--Second class rates at 1½@2 per cent, while railroad securities are difficult to be placed at 2@3 per cent. per month.

The Stock Market transactions have been limited and at falling rates.

Eastern Exchange remains at our last quotations.

To Railroad Companies.

A GOOD Second-Hand Lathe for sale, suitable for railroad repair shops, for turning driving wheels, etc.; will swing eight feet. Also, two new Locomotives of the following dimensions: Cylinder, 15 in box, 20 in stroke; four drivers, 5½ ft. diameter; Boiler, 44 in diameter, with 137 1¾ in flues; Fire Box, 52 inches, in the clear: gauge, 4 feet 10 inches, built in the latest style and in the most substantial manner.

Apply to COOPERS & CLARKE,
Mt. Vernon, Ohio.
Or, THOS. G. ODIORNE,
May 25-1* Cincinnati.

NOTICE TO CO NTRACTORS.

SEALED Proposals will be received at the office of the undersigned in Indianapolis until the 10th of June next, for the Grading, Masonry and Bridging of that portion of the Indiana and Illinois Central Railway extending from Indianapolis to Bainbridge, in Putnam county, being a distance of about 35 miles, of heavy work. The map and profile, together with the plans and specifications will be ready for inspection on and after the 1st of June at the office of the undersigned at Indianapolis. The undersigned reserve to themselves the right to reject all proposals that are not satisfactory.

M. C. STORY & CO.
Indianapolis, May 15, 1854. my. 18-tt.

NOTICE TO CONTRACTORS.

PROPOSALS for the entire Construction and Equipment, or the graduation, bridging and masonry separately, either in whole or in part, of the Mississippi and Tennessee Railroad, (extending from Memphis to Grenada Mississippi, about 97 miles,) will be received at the office of the company in Memphis, till the 20th of July next. Proposals for the entire construction and equipment, and otherwise as favorable, will have preference. Profiles and estimates of the first 60 miles may be seen on application at the Engineer's office in Memphis. Bidders must furnish satisfactry evidence of their ability to complete the work.

MINOR MERIWETHER,
May 20, 1854. Chief Engineer.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our RAILROAD MAP, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Marietta & Cincinnati Railroad.

OPEN between CHILLICOTHE and GREENFIELD, Connected by Stage at Hillsborough, with Hillsborough and Cincinnati, and Little Miami Railroad Trains, forming a through daily line each way.

On and after Monday, the 8th of May, passenger trains will run as follows, viz:

Leave Chillicothe at 9 00 A. M,
Returning do Greenfield at 5 30 P. M.

Passengers from Cincinnati leave by Little Miami Railroad, at 7 40 A. M., dine at Hillsborough and reach Chillicothe the same Evening.

Fare from Cincinnati to Chillicothe, $3 45.

J. W. STOWELL,
Chillicothe, May 6th. '54— Sup't.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of those boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with those boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18. Office, No. 167 Broadway, New York.

Cincinnati, Logansport & Chicago Railroad.

TO CHICAGO IN 15 HOURS.
ALL THE WAY BY RAILROAD.

TWO daily trains, at 6 A. M. and 3 30 P. M. Cincinnati, Hamilton and Dayton Railroad.

BAGGAGE CHECKED THROUGH.

FARE:

From Cincinnati to	Indianapolis		$3 00
do	do	Lafayette	5 00
do	do	Chicago	9 00

For information and through tickets, please apply at the General Railroad Ticket Office, No. 169 Walnut st., next door below the Gibson House, or at the Sixth street Depot.

JOHN W. SHIPLEY, Agent.

The Hamilton and Dayton Railroad Omnibus Line will call for passengers in any part of the city by leaving directions at the Ticket Office.

W. H. SMITH, Conductor.

Trains run by Columbus time, seven minutes faster than Cincinnati.

NOTICE.—The Subscriber having become proprietor of MYERS' PATENT CYLINDER CAR, for a considerable portion of Western territory, including the State of Ohio, offers the same to Rail Road Companies on favorable terms. The public will be furnished within a short time with complete explanations of its operation, together with the results of actual experiments testing its applicability to all the uses for which it is recommended. Change of Time on Cincinnati, Hamilton, Eaton & Richmond Railroad.

ON and after TUESDAY, April 4th, 1854, the Morning Train for Richmond and Indianapolis, will leave Depot, foot of Sixth street, at 6 o'clock, A. M.

Passengers by this Train connect at Indianapolis with the 1 o'clock, P. M. Train on Lafayette and Indianapolis Railroad for Lafayette and Chicago; arriving at Chicago by 9 o'clock, P. M., of same day, being 9 hours less time than by any other railroad route leaving Cincinnati.

Also, connect at Indianapolis with 1.15 P. M. Train for Terre Haute.

Trains for St. Louis leave Chicago at 11 o'clock P. M., after the arrival of 1 P. M. Train from Indianapolis in the morning, making this the quickest route by far between Cincinnati and St. Louis.

Evening Train will leave as usual, at 3.30 P. M. connecting at Richmond with 7 P. M. Train for Indianapolis; arriving at Indianapolis at 10.30 P. M.

Chicago and Lafayette passengers, by this Train, sleep at Indianapolis, and resume at 6, A. M. next morning,

Plain do do 1-32 to 1 inch thick.
Pure do do
Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the LDEST of weather, as they are in 150 Fahrenc°heit heat.

Armitage Anvils,—10 casks, assorted weights, n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mouschole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted tho modo for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in uso in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

Tho vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall bo made; and in all cases where the Stocks or Bonds shall be struck down on their resorved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S
PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th.—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

MR. JOHN LIGHTNER:

SIR:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable.

Very respectfully yours,
W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION· as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture, suitable for Railroad, Turnpike, Canaling, &c., in lots, to suit purchasers. Orders filled for any reasonable amount

HENRY ROCKEY,
No. 21 East Front street

J. DAVENPORT.... M. D. WELLMAN.... C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,

Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburg, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel, or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident, that perfect satisfaction can be given in all work entrusted to our care

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States. JOSEPH DAVENPORT.

Feb. 16†*

James' Railroad & Route Book

NEW EDITION:

Containing a list of all the Western and Southern Road with distances, fares, connections, etc., etc. Price, 15 cents. J. A. & U. P. JAMES,

Publishers, 167, Walnut st., Cincinnati, O.

Indianapolis and Cincinnati Railroad, via. Lawrenceburgh.

NEW Route to Indianapolis, Terre Haute, Lafayette, and the West.

Through from Cincinnati to Indianapolis in six hours.

Shortest route between Cincinnati, Indianapolis, Terre Haute, Lafayette and Chicago.

Passengers for this line will leave Cincinnati, from the foot of Main street, at 6 o'clock, A. M., by steamer Forest Queen, every day. (Sunday's excepted.) and arrive at Indianapolis at 12 o'clock, M., in ample time to get dinner, and take any of the trains West or North.

Baggage checked through and baggage master accompanies the same.

Fare between Cincinnati and Indianapolis $3

At Shelbyville passengers may take the Jeffersonville, Rushville and Knightstown cars.

Returning, leave Indianapolis at 12 o'clock, M.

GEO. HAVEN, Superintendent.

Through tickets may be procured on board the boat, or at the ticket office, corner of Water street and landing (foot of Main street.)

jan 12-† C. S. RUSSELL Ag't.

Covington and Lexington Railroad Open to Falmouth.

ON and after Monday, the 7th of Nov., and until further notice, Cars will leave Covington daily (except Sundays) at 7 o'clock. A. M., for Falmouth,—stopping at DeCoursey, Culbertson, Grant's Bend, New Philadelphia, Cantou, Benton, Morning Side, Demossville, Butler and Irviug.

Returning, will leave Falmouth at 1 P. M., stopping at all of the above stations.

☞ For freight and passage apply to C. CARPENTER, Freight Agent, Covington Depot.

R. M. SHOEMAKER Superintendent.

Office Cov. and Lex. R. R. Co., Nov. 5th.

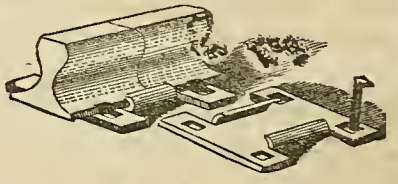
COLUMBUS

Railroad Chair Manufactory.

THE subscriber having enlarged his works, is prepared to fill orders for wrought iron

RAILROAD CHAIRS,



on short notice. He would call the attention of Railroad Companies to his patent Thick Lip Chair. Chairs made to any pattern and of any size which may be required, and warranted of superior quality of iron and workmanship.

P. HAYDEN can be found at 219 Pearl street, New York, where also specimens of the chiars can be seen.

P. HAYDEN.

Columbus, August 11, 1853.—au18-6*

RAILROAD SPIKES,

WROUGHT IRON

Chairs and Fastenings.

THE subscriber coutinues to manufacture with increased facilities, **Hook and Flat Head Railroad Spikes, and Wrought Iron Chairs of any pattern,** either punched or plain. The best quality of Iron is used, and the articles are guaranteed to give satisfaction in every respect. We are prepared to fill orders for any quantity with despatch, and at the lowest market prices.

Also, Boat Spikes, Bolts, and Boiler Rivets, superior quality.

All communications addressed to us will meet withprompt attention.

OUR RAILROAD MAP---NEW EDITION.

We have now ready a new and revised edition of our Railroad Map, containing corrections and additions from reliable sources, making it as reliable as it is possible to make such a map.

We are prepared to print maps for Railroad Companies to illustrate their reports, either from the stone as it now is, or make any alterations to suit parties. Railroad Companies will find this much more economical than getting up maps especially for their roads.

Price of maps as follows:

Plain, sized,	40 cents.
Colored in outline,	50 "
Colored in States,	75 "

A liberal discount where a number are taken.

"BRECKENRIDGE COAL"—"GAS."

We are not in the least degree disposed to interfere with the speculations of our neighbors, nor to limit, in any degree, the amount of "gas" which they think necessary for the illumination of the public. But, we deem it entirely admissible to cross-examine the witnesses, furnished by the speculators themselves, and give both notes of the story to the jury of the public- One of these speculations is that of the "Breckenridge Coal Company" whose lands are located near the Ohio, and in the lower part of Kentucky. The proprietors of this coal bank had their fifty respectable gentlemen appointed as Commissioners on the advantages of this coal bank, after the manner of a commissioner *de lunatico inquirendo*. One of them was Professor Silliman, jr., one Geo. D. Prentiss, of of the Louisville *Journal*, and one a citizen of Kentucky. The triumvirate reported, in a long and lucid paper, that the vein was a most extraordinary one; that the coal was very superior, and that such a quantity—meaning more than is consumed from Louisville to the Gulf of Mexico—would be at once demanded, at very high rates. On this report the modest directors proceeded to apportion the stock, at the net little sum of *four million of dollars!*

Now, we know nothing about any part of this matter, except what we derive from this report, furnished by the Company itself, and on that we have one or two remarks to make. The following, which we take from the *U. S. Economist*, is a summary of the *qualities* claimed for the coal :

The peculiarities of this singular coal are, 1st: the ease with which it ignites; 2d, the power, volume and endurance of its combustion, and its freedom from snapping explosions; 3d, its wonderful strength in resisting blows, and the consequent entire absence of loss from transportation and repeated handling; 4th, the small quantity of coke which it leaves, and the consequent absence of cinders or half-burned coal in its ashes; 5th its resistance to atmospheric influences, frosts, rains, etc., by which all dangers of slacking or falling to powder is avoided.

In other words, this is a highly inflammable *Cannel* coal, which lights like pine, and burns almost as easy. Mr. Silliman shows, by his analysis, that the proportion of carbon and bitumen, in the Youghiogheny and Breckenridge coal, are almost *exactly reversed*; but he

makes no particular commentary on that fact, which is the very material one of the whole investigation. Thus the carbon is to bitumen, in the Youghiogheny coal, about as 65 to 33; but in the Breckenridge coal the carbon is to the bitumen only as 35 to 60. We quote from memory, but the proportion is nearly this. Now the *profitable use* of coal depends almost exclusively on its carbon. For example, the Pomeroy coal ignites easier than the Pittsburgh coal, but it is from 2 to 4 cents less per bushel, in the retail market, because the Pittsburgh coal having more carbon is more economical. Now the coal, which is the most economical is the one preferred; and on the analysis of the Breckenridge coal, it is not that, by any means.

Again, a claim is made for an enormous consumption of this particular coal, in the valley below, as if there were no competition, when it is perfectly notorious that two thirds the Ohio river, and its tributaries, are lined with coal of all kinds from the most carbonaceous to the most inflammable.

Upon the whole, we entirely agree with the very significant remark of the "*Economist*," on the Breckenridge coal:

It is probable, however, that its value for the manufacture of "gas" will be found too great to allow of its consumption for fuel, since its analysis by Chilton shows that it contains 13 per cent more gas than ordinary Cannel coal, although the same qualities make it more desirable for all other manufactures, like that of glass, where voluminous flame is necessary.

DIRECTORS, ENGINEERS AND CONTRACTORS.

Under this head a correspondent complains that engineers underrate railroad work in their estimates; that contracts must conform to these estimates or they will not be accepted; that Directors put railways under contract when they have not the means to pay in full, and that as a consequence of all this, contractors lose on their contracts. Now, on this statement we wish to ask one question. Admitting all this to be true, are Engineers and Directors more to blame than Contractors? How? It takes two to make a contract, and the company and its officers are but one side. The company is not bound to furnish head-work as well as earth-work to contractors. Now there is a simple remedy for this evil; so simple, one would think every contractor availed himself of it. Is a piece of work advertised for letting, and the profiles and specifications furnished? Then let the bidders examine it for themselves.—If they suspect there is *stone* where there is specified *earth*, let them probe and ascertain the truth. If the engineer has estimated it too low per cubic yard, then let the bidder offer only what it can be done for. But, says our correspondent, then he will not get the contract. Well, what then? Is he not much better without the contract than with it, if it is to be a loss? Our correspondent assumes what cannot be assumed, that the bidder or contractor is wholly dependent upon the engineer. On the contrary, he should always examine for himself, and then bid only what he knows it can be done for.

On the other side, if the engineer has really misled the contractor, in positive statements or measurements, undoubtedly any honest or liberal Board of Directors should make an allowance for it.

With these remarks we cheerfully give the *hints* with which our correspondent closes his remarks.

As hints, I suggest the following:

1. Directors should never put their work under contract till means are provided, or a reasonable probability thereof.

2. They should never commence a work of any magnitude, depending upon country subscriptions for the means of payment; though safe, they are generally slow.

3. They should never ask a contractor to do work for less than its value; pay a fair price and in this you have the secret of a contractor's responsibility; short of this, his responsibility, so far as the completion of your work is concerned, is all moonshine.

4. As the engineer is the one upon whom the Directory depend for correct information as to the value of the work, he should be careful to estimate it sufficiently high, and not be circumscribed by the company's necessities.

5. The engineer should so classify his material as to enable the contractor to provide for it in his bids, and not compel him, as is often the case, to work at a price entirely below its value.

5. The engineer should so frame his form of contract, as to make it what it purports to be, a "contract" and not an article of guardianship.

In the hope that the foregoing may tend to removal of the grievances complained of, I shall say no more. P. I.

Note.—In reference to the last clause of No. 5, it is plain that no engineer and no company *can* compel a "contractor" to do work below its value.

Iron as a Material for Bridges.—We copy from a recent English work on Engineering, the following information on the subject of the change suffered by iron when affected by vibration:

"Upon the perfectiou of the fibre of iron much of its strength and value depends, although by skillful management this silky character may be imparted to common varieties of the metal. The fibrous character is not, however, necessarily permanent; for after a time the metal has been found to assume a crystaline appearance, especially when subject to constant vibration, as in the tension rods of suspension bridges, the axles of locomotives and of railway wagons, etc. A few years ago Mr. Chas. Hood brought before the (English) Institution of Civil Engineers some interesting facts respecting the conversion of fibrous into crystaline iron. According to him the tough and fibrous character of wrought iron is entirely produced by art, and there is a constant tendency in such iron, under certain circumstances, to return to the crystalized state, which state is not necessarily dependent upon time for its development, but is determined by other causes, the chief of which is vibration. Heat, within certain limits, though greatly assisting the rapidity of the change, is certainly not essential to it, but *magnetism*, induced either by percussion or otherwise, is necessary to the change. It was shown by specimens that in the same rod or bar of wrought iron the crystalization is far more extensive in those parts most expoeed to vibration. In the parts not so much exposed the texture remains fibrous.—*Balt. American.*

Railroads.

MASSACHUSETTS RAILROADS.

It is scarcely twenty years since the first railway passenger train in the Commonwealth left Boston for Newton. At that date, there were but 800 miles of railway in operation throughout the United States. Now the number can not be less than 18,000, extending from Bangor in the East, to St. Louis in the West, and N. Orleans in the South. The number of miles of railway within the geographical limits of Massachusetts, is about 1100, being one mile of railway to each seven square miles of its geographical surface. Essex county, in this state, has one mile of railway to each three square miles of its geographical surface. The metropolis of Massachusetts may be compared to a hand with eight fingers, in conformity with the number of railway lines, into which the railway system of the Commonwealth is divided, viz:

1. The Worcester road, together with the Western, Charles river, Providence and Worcester, Worcester and Nashua, Fitchburg, and Worcester, Amherst and Belchertown, Connecticut river, Pittsfield and North Adams, Berkshire, Stockbridge and Pittsfield, West Stockbridge and their branches, measuring 472 miles in length, and constructed at a cost of $22,125,534. The total receipts upon this line, in 1853, were $3,319,994, the expenses $1,700,992; and the net income $1,619,002.

2. The New York Central road, which at present commences at Dedham and extends to Blackstone, R. I. It will, however, within a short period, commence at the depot now in course of construction at the foot of Summer street, and will be extended from Blackstone to Mechanicsville, on the Norwich and Worcester railway. This road, in its present condition, together with the Medway Branch, measure 30 miles in length, having been constructed at a cost of $2,257,141. The total receipts upon this line in 1853, were $69,146, the expenses $36,797, and the net income $32,349.

3. The Providence road, together with the Taunton Branch, New Bedford and Taunton, Stoughton Branch, and their branhces, measuring 92 miles in length, and constructed at a cost of $4,506,575. The total receipts upon this line in 1853 were $728,276; the expenses $399,709, and the net income $328,567.

4. The Old Colony road, together with the Dorchester and Milton, South Shore, Fall River, Cape Cod Branch, and their branches, measuring 130 miles in length, and constructed at a cost of $4,530,404. The total receipts upon this line in 1853, were $758,906; the expenses $423,359; and the net income $335,547.

5. The Fitchburg road, together with the Vermont and Massachusetts, Harvard Branch, Lexington and West Cambridge, Peterboro' and Shirley, and their branches, measuring 167 miles in length, and constructed at a cost of $7,694,846; the total receipts upon this line in 1853 were $900,856; the expenses $567,853; and the net income $334,003.

6. The Lowell road, together with the Nashua and Lowell, Lowell and Lawrence, Salem and Lowell, Stoney Brook and their branches, measuring 85 miles in length, and constructed at a cost of $3,688,445. The total receipts upon this line, in 1853, were $711,493; the expenses $475,492; and the net income $236,001.

7. The Boston and Maine road, together with the South Reading Branch, Saugus Branch, and their branches, measuring 99 miles in length, and constructed at a cost of $1,517,975. The total receipts upon this line, in 1853 were $817,683; the expenses $415,850; and the net income, $401,833.

8. The Eastern road, together with the Essex, Newburyport, Grand Junction, and their branches, measuring 117 miles in length, and constructed at a cost of $6,027,732. The total receipts upon this line in 1853 were $687,679; the expenses, $312,704; and the net income, $373,975.

It will be seen that the various roads are grouped according to their geographical position. By this arrangement, in some instances, rival lines are placed in the same division.

[*Boston Transcript.*

Lyons, Iowa Central Road.—We have been questioned relative to the reports of sales of the bonds of this Company, as found in our money articles—why they should sell so low and be continually falling. We have no full information on the subject, but take the following from the Iowa City *Reporter.*

"It becomes our painful duty to chronicle the demise of the Company which has had the management of the above road, and their absquatulation, bag and baggage, from the scene of their temporary achievements.

"Facts, which are 'stubborn things," force this conclusion upon us, although we have not a detailed narration of their 'Decline and Fall." In this occurrence we see but little to regret, so long as the Company were working upon suppositions, probabilities and expectations, without any solid, immediate, reliable basis of support, for it will sooner throw the road into the hands of men who possess present and available resources to continue and push it on."

Communications.

For the Railroad Record.

ON THE SUBJECT OF BRIDGES OF GREAT SPANS FOR RAILROADS.

BY EDWARD W. SERREL, C. E.

The deep and wide valleys which occur on almost all lines of railroad of considerable length, in the West, render a system of construction adapted to very great spans, perhaps, more applicable here than in any other part of the world.

The boundless prairies are traversed by streams which in many places have scored them out to depths of from 200 to 300 feet, and to several thousands of feet in width.

The general plane of the country, in many cases precluding the adoption of undulating grades on railroads, by which the valleys could be entered and crossed, as the abruptness of the slopes would cause very long cuttings and embankments, on either side. Hence the necessity for high and long mechanical structures.

As every day adds value to our railroad system, so any additional means for overcoming the natural obstacles which occur in the way of its extension become important, whether tunneling machines, of improved patterns, hoisting or drilling machinery, or improved stationary or mining machinery, or mechanical structures, and some cheap and permanent means for crossing the deep and wide valleys, is a great desideratum.

For many years past the opinions of scientific men, in this country and in Europe, have been divided upon the best method of constructing bridges of large spans for railroads.

Several plans have been proposed, and in England elaborate experiments have been tried with a view of solving this question.

Wrought iron girder bridges were tried in several ways, cast iron arches were built, but still nothing was discovered that proved satisfactory under the tests applied for spans of over 250 feet, until the idea of the Tubular bridge occurred to Mr. Stephenson.

This plan in practice has been carried to a span of 459 feet 3 inches. The bridge is a rectangular figure of wrought iron plates riveted together, and the railroad passes through it.

In this country wooden bridges have been carried to greater perfection, than in any other part of the world. Trussed spans of 250 feet are now in successful use, and in some peculiar situations wooden arches of still greater size have been constructed. The Cascade Bridge, in a rock chasm on the New York and Erie Railroad, built under the direction of Maj. Browne, by J. W. Adams, Esq., is the arc of a circle, and is 273 feet on the chord lines. Bridges of this character, but somewhat different in detail, have also been constructed in Canada.

Yet vast as have been the improvements in trussed bridges, we are still unable by this kind of structure to span the gorges that have to be passed, and the Tubular bridge is limited in two ways—first, by the enormous cost, and again by the cohesive strength of the materials of which they are constructed.

The Niagara, the St. Lawrence, the Mississippi, the Missouri, the Ohio, the Tennessee, the Arkansas, and many other rivers have to be crossed and re-crossed by the numerous lines of railroad that must before many years be constructed.

Some of these rivers, with their valleys, will require spans of from 1200 to 2000 feet, even where the foundations for the piers or towers are placed in deep water. *Examples might be enumerated on the lines contemplated and in actual course of construction where spans of* 1800 *feet will be required.*

This it must be remembered, is four times as great as anything that has yet been contemplated in any part of the world for railroad purposes, and as yet we have no actual demonstration of the practicability, by their use, of spans greater than that of the Britannia Tubular Bridge.

The information obtained on this subject during the last few years, puts the question beyond a doubt, however, that a structure may be built, upon the SUSPENSION principle, capable of spanning *at least three thousand feet.* By this it is meant that a bridge of one span of 3000 feet may be constructed, over which a train of cars of any weight may pass with perfect safety, and it is this point which it is proposed by this paper to investigate.

The ultimate strength of bridges of this character, is in the cables, anchors and flooring.

If, for example, the cables are to be composed of wire, one strand of which when stretched across the span contemplated, will sustain its own weight and something more, which quantity is known, it can very easily be demonstrated what number of strands will be required to carry any given load, provided the load is at rest. When the load is at motion the conditions are varied, but the result is determinable. Hence it is universally conceded that a suspension bridge, may be made of almost any desired span, within the limits of the cohesive force of the material composing the cables, which shall be capable of carrying with perfect safety any required load, provided the load is stationary, but when the load has to pass over the bridge, more especially when a high rate of speed is required, the conditions vary and differences of opinion arise as to the best method of arranging the details of the structure.

Vibrations and oscillations occur in ordinary suspension bridges, (more particularly in those that have been built in Europe, in consequence of the disposition made of the cables) which, although they do not hinder the travel on a common road, would impede, if not entirely stop, the passage of a train of cars, drawn by locomotive power.

Several attempts have been made to render the platform of an ordinary suspension bridge rigid by trusses of various patterns. Some engineers have proposed to make light tubular bridges similar to the Britannia and Conway bridges, but of much lighter plates, and to add to this suspension cables. Others have proposed to stiffen the roadway by an ordinary wooden truss, and to depend in part upon the truss and part upon the cables for the sustaining properties of the bridge, but all these plans have defects which are radical.

The same laws which govern the equilibrium of the universe, which hold the stars in their orbits and direct all gravitating forces, apply equally to a suspension bridge for railroad purposes, and it is only by a knowledge of these laws, that the problem can be solved unerringly, for it is by the maintainance of *equilibrium* alone that the integrity of the structure can be preserved.

All matter has a natural and inherent property, which causes it to *remain at rest or to move with uniform motion unless disturbed by secondary causes** and it requires a certain absolute force either to move anything from a state of rest or to stop anything in motion, hence it is quite evident, *that a force exerted against a ponderous body is not sufficient to overcome its inertia or tendency to remain at rest it will not be moved*, and it also follows, *that if a load is to be moved on a body in equilibrium, and that body bears such a ratio (in weight, which is force) to the body in equilibrium* that *it readily overcomes the inertia of the quiescent body, a disturbance will ensue*, and the disturbance will be in the *relative proportion of the inertia* or the tendency to remain at rest and *the vis viva* or tendency to move *of the two bodies.*†

Now, a bridge is a body in equilibrium, and in the case of a suspension bridge it has, in consequence of being suspended from but few fixed points, little or no *inertia* beyond what is due to the actual weight of the suspended parts; consequently unless it is trussed or guyed, or the platform is sustained at the ends of the roadway on the banks, it is subject to be moved by any force applied to it, if the force is sufficient, in the same manner as a chain might be, if suspended by the ends from two fixed points, and it does not necessarily follow that motion produced in a flexible body should be injurious.

It is necessary however, in order that a train of cars drawn by a locomotive, may pass freely and safely over a bridge that it should be comparatively inflexible and rigid under the weight of the train. To produce this inflexibility and steadiness is the main question.

It has been shown that a bridge may be built of any required strength. By the application of the laws above stated, it follows in order to make it steady and sufficiently rigid under the loads it may have to pass, it must be made CORRESPONDINGLY HEAVY; no other condition is necessary.

Make the bridge *so heavy* in *proportion to its load* and velocity of that load, that it shall bear the same relation to the weight of the bridge, that a lighter load at less speed does to a lighter bridge and the result in both cases will be the same. These conditions can be attained within the limits of reasonable expenditure.

In consequence of the expansion and contraction by atmospheric changes, of the material composing the different parts of an ordinary suspension bridge, it is impossible to connect it any where immovably to the shores, except at the anchors of the main cables, or at the ends of the guys. If the platform is of wood, it will not change length perceptibly, while the cables, being of iron, change their length with every change of the temperature. Consequently if the floor is trussed to render it rigid, it will alternately be raised from its bearings on shore, by the contraction of the cables, and then again be called upon to sustain an undue proportion of weight by the elongation of the cables.

Any system of trussing by counterbracing yet arranged, would be greatly injured by these alterations. A truss to be perfect, must be always rigid, which could not be the case when made of wood and connected to catenarian cables of iron. Methods have been suggested for compensating the expansion and contraction of the cables, by sliding wedges and hydraulic presses, they are, however, as yet untried, and if applicable to trusses of iron would not be to those made of wood.

For the same reasons it would not do to connect a light tubular bridge with a suspension cable, for the tube would be alternately raised from its bearings, and so form no part of the sustaining portion of the bridge or would be lowered on to the bearings and from the slackness of the cables have all the load to carry.

If, on the contrary, the bridge is made so strong as to be capable of sustaining safely its own weight and any additional load which is brought upon it, and so heavy as to resist the momentum of a train by means of its own *inertia*, what will prevent it remaining at rest? Nothing.

A system of timbers might be advantageously employed for distributing the weight of a load over a greater part of the bridge than that which it rests upon, but these must be so arranged as to accommodate themselves to the slight flexures which the bridge will experience without injury. If they are made as a parapet of four or more square timbers, (say each 12 or 14 inches square, according to the size of the bridge), bolted together, they would spring to any slight deflection without injury which a counterbraced truss would not. The additional necessary weight may be produced by fire-proofing the floor or in any other desireable manner.

In an article of this character where any particular structure is not referred to, it is unnecessary to enter into details. All know that cables strong enough for spans of 3000 feet can be made, as wire ropes are in use, for telegraph purposes, suspended between points further apart than this; that these can be fastened to anchors strong enough to retain them; that a platform may be made, and hung from such cables, strong enough for any load. The question of stability is then the only one at issue. A heavy chain suspended by the extremities, is not so easily shaken or disturbed as a light one of the same span and hung in the same manner. Is it not conclusive that a heavy bridge is more stable than a light one?

Independently of the fact that suspension bridges may be built, where from the magnitude of the span, no other, yet known, could be constructed, the comparative cheapness entitles them to consideration, even where high piers and shorter spans might be substituted.

The durability of the material and the shortness of the time required to build them, are also important considerations in their favor.

New York, May 20th, 1854.

IMPORTANT DISCOVERY. — The following paragraph is from the Washington correspondence of the Baltimore *Patriot*.

"A discovery has recently been made which is destined to prove of incalculable advantage to the commercial marine of this country, and of the world, and to the preservation of all war vessels, from the destruction of the marine worm. An article upon the subject, of great interest, has been prepared by the editors of the Globe—Mr. Pickett doing the scientific and Mr. Rives the practical part thereof—which will, in the course of a few days, appear in the columns of that paper. The marine worm enters, from the sea, or salt water, the plauks and timbers of a vessel, when so small as to be imperceptible, and eats and grows as it moves along, until it becomes as large and long as one's finger. It never eats out, but when it approaches the edge of the plank or timber it is destroying, it takes a circuit and works back. A ship appearing sound outwardly, may, by these marine worms, be rotten in all her timbers—literally eaten up, for the worm leaves no mark or trace of its place of entrance. All

*For a full explanation of this law, see the Principia of Sir Isaac Newton.

†These rules were investigated and successfully applied in the case of the bridge over the Niagara river at Lewiston, built by me in 1850, which is the largest span in the world yet constructed, being 1040 feet in the clear.

outwardly looks firm, while all inwardly is hollow and unsound. Neither copper, nor tar, nor ordinary paint constitute any bar to the inroads of the marine worm. But the use of the New Jersey Zinc Paint does most effectually prevent the worm from entering the ship. It has been thoroughly tried and tested at the New York Navy Yard and elsewhere, and found to be a sure remedy, not only against the destructive marine worm, but it effectually keeps off all coral or barnacles, which will cling to and grow upon and retard the progress of vessels that remain in salt water any length of time, unprovided and uncovered with the Zinc Paint. I have alluded to this subject, as it is one but little understood as yet, but which is destined for adoption as one of the standard measures o marine protection,"

CINCINNATI, CUMBERLAND GAP & CHARLESTON RAILWAY.

A large and enthusiastic meeting of the stockholders in the Cincinnati, Cumberland Gap and Charleston Railroad was this day held in the town of Tazewell, Tenn., according to previous notice of the Commissioners.

Upon motion of Col. William Houston, of Clairborne county, Hon. Wm. M. Cocke, of Grainger county, was called to the chair, and Walter R. Evans, was appointed Secretary. It appearing that the great body of the stockholders in said road were present, and that the amount of stock required by the charter to be taken in order to authorize an organization of the company had been taken, and was here represented, the stockholders proceeded to elect a Board of Directors for said company for the ensuing twelve months.—When were elected—

Hon. Wm. M. Cocke, Thos. W. Turley, Wm. J. Thomas, Joseph Campbell, Col. Wm. Houston, W. R. Evans, Dr. M. Carriger, Lewis A. Garrett, Jas. M. Patterson, David C. Cotrell, John G. Newlee, Isaac Thomas, Wm. Kincaid, and Jesse Evans.

Upon motion, the meeting of stockholders then adjourned.

The Board of Directors then assembled, all being present, when,

On motion of Dr. M. Carriger, Hon. W. M. Cocke, of Grainger county, was unanimously elected President of the road, and Wm. Neil, of Clairborne county, Secretary and Treasurer.

Upon motion of W. R. Evans, it was

Resolved, That the President of the road be requested to visit Cincinnati and Charleston, and the intermediate points, for the purpose of solicititing stock and co-operation, and also to open a correspondence with engineers for the purpose of securing the services of a competent corps of engineers for the road.

Resolved, That Dr. M. Carriger, Thos. M. Turley and Jacob M. Bewley, be and are hereby requested to address the people in the vicinity of the road, from Cumberland Gap to Paint Rock, on the Frenchbroad river on the North Carolina line, for the purpose of obtaining additional stock, and that W. R. Evans, L. A. Garrett, F. M. Fulkerson, Rev. John M. Kelly, of the county of Clairborne; Milton Shields, Jas. T. Shields, W. H. Malone, in the county of Grainger; Col. M. Thornburgh, Gen. W. R. Casewell, W. M. Bradford and Col. H. H. Hubbard, of the county of Jefferson; Maj. S. M. Temple, Col. Bullin and Maj. Britton of the county of Greene; Col. John Netherland, Gen. M. C. Kyle, and A. A. Kyle of the county of Hawkins, be and they are hereby requested to canvass their respective counties for the purpose of soliciting stock in said road.

Col. Wm. Houston offered the following which was unanimously adopted:

Resolved, That the Secretary and Treasurer of the Board, call upon the stockholders for such an amount of funds as may be necessary to meet accruing expenses.

Resolved, That the editors of the RAILROAD RECORD, Cincinnati; Lexington Statesman, and Richmond Messenger, Ky.; Ashville Messenger, N. C.; Charleston Mercury, S. C, and the Knoxville and Rogersville (Tenn.,) papers be requested to publish the proceedings of this meeting.

Thereupon the Board adjourned to meet again at such time and place as the President may hereafter indicate, of which time and place, due and timely notice shall be given.

WM. M. COCKE,
President.

WM. NEIL,
Sec'y and Treas'r.

MOBILE AND NEW ORLEANS RAILROAD.

Brief Synopsis of the Report of Lewis Troost, Esq., Consulting Engineer, on the Preliminary Surveys of the Mobile and New Orleans Railroad, made by the late Col. A. A. Dexter, C. E., for the Mobile and Ne Orleans Railroad Company.

Several preliminary lines were surveyed by Col. Dexter from Mobile to Pass Chef Menteur, all of them passing through the watering places on the Gulf; of these the following line is the most favorable: Commencing at Mobile river, in Mobile, fifty feet northwardly of the north line of Virginia street to the western boundary of the city; thenco deflecting to the southwest, it runs to Pascagoula Bay, near Mrs. Rue Kreb's, crossing North, Middle, and South Forks of Dog river at the head of navigation and keeping about three and one-half miles southeast of a direct line between Mobile and Pascagoula, in order to avoid the ridges between the waters of Mobile Bay and Escatapa river.

Thence crossing Pascagoula Bay, it runs along and near the coast of the Gulf of Mexico, in the rear of Ocean Springs, the villages of Biloxi and Mississippi City, Pass Christian and Shieldsborough, to the Great Rigolets at its entrance into Lake Borgne; intersecting in the distance the Bays of Biloxi and St. Louis and East Pearl river.

Thence crossing the Rigolets, the line runs nearly direct to New Orleans, intersecting the Little Rigolets and Pass Chef Menteur—the latter at the mouth of Bayou Gentillys near Fort Wood.

The country from Mobile to Pascagoula (40.19 miles) is a flat, piny wood for 13.94 miles, and gently undulating for 26.25 miles. The soil is light sand and mud and clay mixed and is very favorable for grading.

From Pascagoula Bay to the Grand Plaine marshes (52.67 miles) the country is very level, and from eight to fifteen feet above the surface of mean tide in the Gulf of Mexico, and the soil is composed for the most part of sand.

Grand Plaine marshes consist of a sandy alluvion, seldom, if ever, subject to overflow, covered with occasional patces of live oak.

The sandy alluvion is from three to five feet deep, and rests on hard strata of sand and shells sufficiently firm to sustain an embankment.

The marshes between Pearl river and Chef Menteur are covered by occasional patches of live oak, and consist of sandy alluvion, resting on firm strata of sand and shells, at depths varying from five to ten feet, capable of sustaining a good road-way. The borings and soundings for foundations may be obtained for bridge structure over the rivers and bays at the depths exhibited in the following:

TABLE OF SOUNDINGS.

Name of River or Bay.	Extreme depth of good foundation below surface of med'm stage of water.	Depth of water at same sound'g.	Depth of snd, mud & shells at same sound'g.
E. Pascagoula River.	35 feet	78 feet	17 feet
W. Pascagoula River.	55 feet	24 feet	31 feet
Bay of Biloxi.....	35 feet	18 feet	17 feet
Bay of St. Louis.....	40 feet	12 feet	28 feet
East Pearl River.....	60 feet	45 feet	15 feet
Great Rigolets.....	65 feet	44 feet	21 feet
Little Rigolets.....	62 feet	40 feet	22 feet
Chef Menteur.....	53 feet	49 feet	4 feet

The result of these soundings and borings is very satisfactory, and at once demonstrates the practicability of constructing a permanent road. The stratum on which this firm foundation can be obtained consists of compact stiff yellow and blue clay.

The following table will exhibit the characteristics of the line:

Total length of line.....	139.00 miles.
Total length of straight line.....	133.32 miles.
Total length of curved line.....	5.68 miles.
Totol deflection in degrees.....	322° 45'
Shortest radius of curvature.....	5730 feet.
Total length of level grade.....	87.20 miles.
Maximum grade each way per mile	26.40 feet.
Total length of grades from 0 to 10 feet per mile.....	26.27 miles.
Total length of grade from 10 to 26 40 feet per mile.....	25.53 miles.
Total length of maximum grades of 26.40 feet per mile.....	14.58 miles.
Total rise and fall in feet.....	704.29 feet.
Highest summit above mean tide to be overcome.....	137.00 feet.

The grades and curves of the Mobile and New Orleans Railroad, as shown in the above table, are remarkably favorable. With a good railroad and a strong iron rail, trains containing 1000 or 2000 passengers can safely pass over it, at a speed of 40 or 50 miles per hour, and freight trains with a load of 275 tons freight, be hauled over it at a speed of 15 miles per hour, thus making the time of transit for passengers between Mobile and New Orleans from three to four hours, and for freight from nine to ten hours.

Omitting the details of plans of construction and of estimates, it is sufficient to state that they are made for a first-class railroad in every respect; all the timber exposed to the action of the sea worms is to be protected by metal sheathing; all navigable rivers and bays are to be provided with draw bridges, 60 feet wide, except the Great Rigolets where it is proposed to have two double draws of 120 feet opening each, the charter of the Ponchartrain Railroad in Louisiana may render it illegal to build a permanent bridge across the Great Rigolets with openings, for navigation, as proposed. In this event, it would be advisable to make a temporary crossing, with a steam vessel so arranged as to take passenger and freight trains on deck, and rely on the wisdom and justice of future legislation for permission to substitute a permanent bridge.

The total cost of the construction of the

entire road complete, including an equipment for the first and second year's business, is estimated at $3,836,360, or $27,016 per mile.

LEWIS TROOST, Civil Engineer.

Office Eng'r Dep't M. and N. O. Railroad,
Mobile April 10, 1854.

The New Orleans *Bulletin* of May 3d, in referring to this subject, says:

On the first page of to-day's *Bulletin*, will be found several communications which have recently appeared in the city papers, advocating the proposed subscription by the city of $1,500,000 to the capital stock of said Company, and defending the proposition against the assaults made upon it in divers quarters, as well as a synopsis of a report from Lewis Troost, Esq., Civil Engineer, showing the advantages and practicability of the route. We understand the strong opposition to the ordinance authorizing the subscription, according to the plan first presented, has induced the Company to modify their proposition on several important points. The *Picayune* of yesterday evening gives the following as the modifications proposed, indorsing them as authentic:

The original proposal required the city, as soon as the ordinance should be ratified by the voters, to issue the whole amount of $1,500,000 in bonds for the use of the Company. They are willing to waive this requisition and make the issue of the bonds gradual and contingent upon the performance of sundry acts by the Company. They have proposed to the Finance Committee of the Common Council, that on the ratification of the subscription, the city shall issue its bonds for $500,000 of the sum subscribed. Books of subscription shall then be opened to individuals, and when the sum of $500,000 shall have been subscribed and ten per cent paid thereupon at the time of subscribing, the remainder to be subject to call by the Board of Directors, the further sum of $500,000 in bonds is to be issued by the city. The remaining bonds also for $500,000, to be issued after the completion of sixty miles of the road.

There would be additional force in this proposition if the second series of bonds were made issuable *pari passu* with the payment of the installments on the private snbscripiions.

The Company, we are told, have offered to relinquish the privilege retained under the third section of the act, by which they reserved to themselves the surplus earnings of the existing Ponchartrain Railroad until the new road is completed; and are willing that these should be merged into the general fund. That road has produced, during the past year, a net revenue of $55,000, which will almost pay the interest on the first million of bonds.

This Company has a grant also of about 360,000 acres of land.

The calculation of the Company is, that when sixty miles of the road are completed, the revenue of the road will be more than doubled, and that the interest of the bonds will thus be fully provided for at a very early period; and if they can retain their lands until the road is finished, they are confident that these will sell for enough to pay the capital of the bonds.

For the building of the whole road, they have offers from competent parties, to be paid in the bonds of the city; and for the excess beyond that amount, in the bonds of the Company—the whole to be completed in two and a half years."

We have yet to meet the individual opposed to a railroad connection with Mobile. The necessity of such a railroad is so apparent that there is no loop upon which to hang a doubt. That it would be extremely profitable to the stockholders, and productive of large benefits to the city, we have no question. And, we are free to express the opinion that the proposition to subscribe $1,500,000 would be supported by the people as unanimously as was the subscription to the Opelousas Railroad Company, if the Mobile road project came before the community, for adoption or rejection, under precisely the same circumstances.

PITTSBURGH—RAILROADS.

A brief account of the Railroads now in process of construction, which terminate in Pittsburgh:

PITTSBURGH & CONNELSVILLE RAILROAD.—We learn from Oliver W. Barnes, Esq., Chief Engineer, that the prospects for an early completion of the work under contract, are very encouraging. A large force is engaged between West Newton and Connelsville, and at the Sam Patch tunnel, the contractors Messrs. Carr, Gould and Collyer, are busied in sinking the shafts.

ALLEGHENY VALLEY RAILROAD.—Mr. Roberts, Chief Engineer of this road, informs us that directions have been given to all the contractors to increase their force, so as to insure the completion of the track to Kittaning by November. Three-fourths of the laborers have been at work during the winter, and all have now resumed operations. The road above Kittaning has been located, and the main contracts made. Proposals, which are now under consideration, have been received from sub-contractors. The iron required for one hundred miles has been purchased and paid for, and we learn with pleasure, that the first cars which will be required have been already engaged.

PITTSBURGH & STEUBENVILLE ROAD.—We are indebted to Daniel Mitchell, Esq., Chief Engineer of the Pittsburgh and Steubenville road, for the following interesting details as to the present condition of this road:

The grading on the whole line is now more than half finished, and that portion lying in Virginia is completed, and an engine running from Steubenville to the State line. The remainder of the roafl is under contract, and with the proper exertions, may be ready for the cars either in the fall or early in the spring. The tunnel at Cork's Run, is within one hundred and thirty feet of being through, the contractors having penetrated thirteen hundred and seventy feet.

CHARTIERS VALLEY ROAD.—We are gratified to learn from Mr. Mitchell, who is also the engineer of this road, that the contractors have commenced work on several sections, and that the means now at the disposal of the Company, will be sufficient to pay for all the grading and half the cost of the iron. There will be no difficulty in finishing it within a year, and the contractors have engaged to have it ready for use by the 1st of June, 1855. It is intended that this work shall keep pace with the progress of the Hempfield road between Washington and Wheeling, so that the latter work will be immediately rendered useful to our city.—*Pittsburgh Journal.*

CINCINNATI, WILMINGTON AND ZANESVILLE RAILROAD—TUNNEL.—This tunnel, at Lexington, passes under the dividing ridge between the Muskingum and the Hocking river. It is 1100 feet long, 18 high, 15 wide, cut in solid rock, in less than six months from the first comencement.

SALE OF THE PUBLIC WORKS OF THE STATE OF PENNSYLVANIA.

By the bill, the Governor is authorized and required to invite sealed proposals for the purchase of the Main Line of Public Works, from Philadelphia to Pittsburgh, consisting of the following Canals and Railroads:

	Miles
Philadelphia and Columbia Railroad, from Philadelphia to Columbia	82
Eastern Division of Canal, from Columbia to mouth of the Juniata	45
Juniata Division Canal, to the base of the Allegheny mountain	128
Allegheny Portage Railroad, across the mountain	36
Western Division of Canal from the Allegheny mountain to Pittsburgh	103
Total	394

No bid can be received for less than $10,000,000, and the terms of payment are twenty per cent paid into the State Treasury in cash, and the remainder in ten annual payments, with interest, at six per cent.

Supposing the Works are sold at the minimum price of $10,000,000, the payments would be as follows:

Year.	Payments.	Year.	Payments.
1854	$2,000,000	1860	$1,040,000
1855	1,280,000	1861	992,000
1856	1,232,000	1862	944 000
1857	1,184,000	1863	896,000
1858	1,136,000	1864	848,000
1859	1,088,000		
			$12,640,000

ALARM WATER GAUGE.—The object of this apparatus is to prevent the explosion of steam boilers. It was invented by Thomas Stubblefield of Columbus, Ga., and most effectually subserves its purpose. Whenever the water gets below the line of safety, it sets up a shriek, which no man can or will disregard who has any love for a *quiet* life, much less of life itself It is a safe and simple invention, not liable to get out of repair, and costs only fifty dollars.

Mr. Stubblefield has invented a steam gauge by which he tells, with matbematical precision, the amount of pressure to the square inch, there may at any time be in a boiler.—*Col. Times.*

THE RECORD.—We have been compelled to occupy a page of our reading columns, the present week, for advertising purposes; we must ask the indulgence of our patrons for a short time until we can perfect arrangements for putting a cover upon the *Record*, which will give us three more pages for advertisements. We shall have some space suitable for *Railroad Companies and Engineers' Cards*, which we shall be pleased to fill upon the following terms, viz: Cards of four lines, $5 per annum, cards of eight lines, $10 per annum.

THE SUNBURY AND ERIE RAILROAD.—At a meeting of the Philadelphia Councils held a few evenings since, a communication was received from the Hon. James Cooper, President of the Sunbury and Erie Railroad Company, informing the Councils that the second million of subscription to the capital stock of the Company, to be obtained in addition to that already subscribed by the city, had been accomplished, and proposing to submit the evidence thereof to the body.

Mouey rates on Stock securities for South and West, 2 per cent. per month.

MONETARY.

At the East money continues to grow more abundant; call loans have been easily made at 7 per cent; first class commercial paper, 8@9 per cent.; less known, 9@12 per cent.; railroad securities, 12@18 per cent. The Banks are accommodating their customers freely on short paper.

Foreign Exchange has been dull at 109@109½; the shipment of specie has been moderate only.

The Stock Market rallied in the early part of last week, but declined somewhat towards the close. The demands for railroad purposes seem most urgent, which, in addition to the fact that many holders of stock are compelled to sell even at a sacrifice, has had a tendency to glut the market with certain classes of securities, and caused a consequent depression.

The sales at the Stock Board have been about as usual, while at the hands of the several auctioneers, they have been comparatively limited. We quote as follows:

By A. H. Nicolay, on the 22d—

45	Shares and Syracuse RR. Co.	70	00
50	Shares Cleve. and Pitts. RR. Co.	73	50

At the West the general features of the Money Market have been quite favorable, though there is still a stringency. First class paper finds a ready market out of doors, while the banks have increased their accommodations to a larger extent than for some weeks previous.—The ruling rates are, first class paper, 1 per cent.; less known, 1¼@1½; railroad securities, 2@2½ per cent per month.

Eastern Exchange has declined to ¾@1 per cent.

In our Stock Market there is a complete stagnation.—None but the very first class of dividend paying securities can find purchasers at anything like fair prices; the forced sales being no fair criterion of the true value.

The Cincinnati Price Current says: "The decision of the Supreme Court of the United States, with reference to the Bank tax question, which has for some days past been the leading topic of conversation in monied circles.—The Court has, as we predicted it would, when the issue was made between the Banks and the State, decided that clause of the Constitution taxing banks, that were chartered prior to the adoption of that instrument, unconstitutional, and therefore void. The Ohio Life Insurance and Trust Company Bank, for some reason, at present not fully understood here, was excepted, and in this case the decision of the Supreme Court of Ohio was confirmed. The amount of taxes disputed, and which the Trust Company will now have to pay, is about one hundred thousand dollars. A meeting of the stockholders has been called, with reference to future action. It is probable that the $1,500,000 loaned in the different counties in the state, will be called in immediately, the notice required by law having been given, and the time expired. We hope some good will grow out of this. No state in the Union stands more in need of intelligent legislation, on the subject of banks, than this same state of Ohio."

Indianapolis and Cincinnati Railroad, via Lawrenceburgh.

Through to Chicago in 15 Hours!

Shortest line to Indianapolis, Terre Haute, Lafayette, and Chicago.

Through from Cincinnati to Indianapolis in six hours. and to Chicago in 15 hours!

TWO TRAINS DAILY, Boat or Cars, each way. (Sundays excepted,) Passengers who prefer taking Steamboat for the first twenty miles, will go by the Steamer **Forest Queen**, foot of Main street, at 12 M.

Those who prefer the Cars for the whole distance, will go by the regular passenger trains of the

OHIO & MISSISSIPPI RAILROAD,

Which leave Cincinnati at 6.30 A. M. and 3.45 P. M.—The train which leaves Cincinnati at 6.30 A. M. connects at Lawrenceburgh with the Indianapolis and Cincinnati Railroad train for Indianapolis, Lafayette, Terre Haute, Michigan City and Chicago.

Baggage checked through and a Baggage Master accompanies the same.

Fare from Cincinnati to Indianapolis $3 00

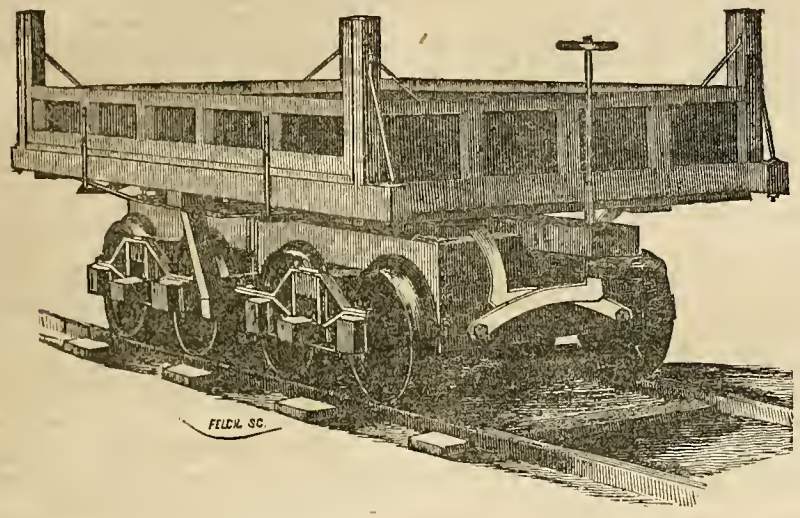
BAILEY'S PATENT DUMPING CAR.

Fig. 1.



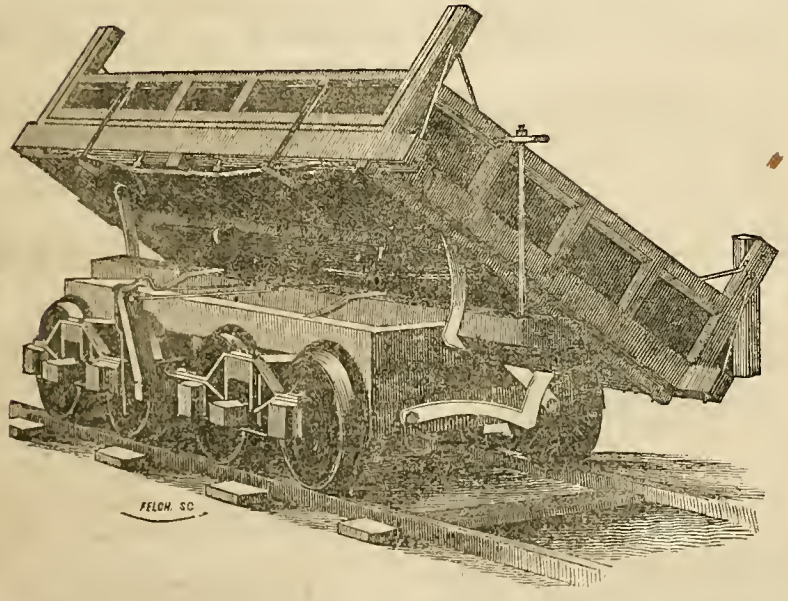


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1851.

Fig. 1 Is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This Improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard,** over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this Improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.

Columbus, Ohio, June, 1854. Sole Agent for the United States.

TESTIMONIALS.

Engineer's Office, C. O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use.

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree in the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors, as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every respect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB,
C. BARRET.
Cont'rs for grav. East. Div. C. O. Railroad.

I have seen the car above referred to at work, upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret

E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a preference over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Association of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Patent Dumping Car,

REPORT,

That they have examined the Car, and consider the Improvement a valuable one; and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT,
For the Committee.

Clev Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L. TILTON,
Sup't.

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horse and one man, to keep it constantly at work, with great ease and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary lime stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patent co.

WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

Marietta & Cincinnati Railroad.

OPEN between CHILLICOTHE and GREENFIELD, Connected by Stage at Hillsborough, with Hillsborough and Cincinnati, and Little Miami Railroad Trains, forming a through daily line each way.

On and after Monday, the 8th of May, passenger trains will run as follows, viz:

Leave Chillicothe at 9 00 A. M.
Returning do Greenfield at 5 30 P. M.

Passengers from Cincinnati leave by Little Miami Railroad, at 7 40 A. M., dine at Hillsborough and reach Chillicothe the same Evening.

Fare from Cincinnati to Chillicothe, $3 45.

J. W. STOWELL,
Chillicothe, May 6th. '54— Sup't.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18. Office, No. 167 Broadway, New York.

Cincinnati, Logansport & Chicago Railroad.

TO CHICAGO IN 15 HOURS.
ALL THE WAY BY RAILROAD.

TWO daily trains, at 6 A. M. and 3 30 P. M. Cincinnati, Hamilton and Dayton Railroad.

BAGGAGE CHECKED THROUGH.

FARE:

From Cincinnati to Indianapolis.....$3 00
do do Lafayette..... 5 00
do do Chicago..... 9 00

For information and through tickets, please apply at the General Railroad Ticket Office, No. 169 Walnut st., next door below the Gibson House, or at the Sixth street Depot.

JOHN W. SHIPLEY, Agent.

The Hamilton and Dayton Railroad Omnibus Line will call for passengers in any part of the city by leaving directions at the Ticket Office.

W. H. SMITH, Conductor.

Trains run by Columbus time, seven minutes faster than Cincinnati.

NOTICE.—The Subscriber having become proprietor of MYERS' PATENT CYLINDER CAR, for a considerable portion of Western territory, including the State of Ohio, offers the same to Rail Road Companies on favorable terms. The public will be furnished within a short time with complete explanations of its operation, together with the results of actual experiments testing its applicability to all the uses for which it is recommended.

Change of Time on Cincinnati, Hamilton, Eaton & Richmond Railroad.

ON and after TUESDAY, April 4th, 1854, the Morning Train for Richmond and Indianapolis, will leave Depot, foot of Sixth street, at 6 o'clock, A. M.

Passengers by this Train connect at Indianapolis with the 1 o'clock, P. M. Train on Lafayette and Indianapolis Railroad for Lafayette and Chicago; arriving at Chicago by 9 o'clock, P. M., of same day, being 9 hours less time than by any other railroad route leaving Cincinnati.

Also, connect at Indianapolis with 1.15 P. M. Train for Terre Haute.

Trains for St. Louis leave Chicago at 11 o'clock P. M., after the arrival of 1 P. M. Train from Indianapolis in the morning, making this the quickest route by far between Cincinnati and St. Louis.

Evening Train will leave as usual, at 3.30 P. M. connecting at Richmond with 7 P. M. Train for Indianapolis; arriving at Indianapolis at 10.30 P. M.

Chicago and Lafayette passengers, by this Train, sleep at Indianapolis, and resume at 6, A. M. next morning,

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agents of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations.—This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, -10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Sales of Stocks and Bonds at Auction,

THE UNDERSIGNED have adopted the mode for the conducting of Sales of

STOCKS AND BONDS AT AUCTION,

Similar to that now in use in the CITY OF CINCINNATI. They are convinced that, by pursuing a method which will satisfy the Public, that all Stocks and Bonds struck off by them at auction as sales, are bona fide such, a business honorable in its character and satisfactory to both buyer and seller, can be conducted, and which will not only meet with the approbation, but also with the support of the public. The undersigned pledge themselves strictly to adhere to the following plan in conducting their sales at auction of Stocks and Bonds:

The vendor will give his confidential instructions to the Auctioneers as to the lowest price at which he will allow his Stocks or Bonds to be sold. They will be offered by Catalogue, as heretofore, but instead of the seller being allowed to make, as they now do, small advance bids on bona fide bidders, the Auctioneers will reserve to themselves the right of making one bid for the protection of and on behalf of the seller, pledging themselves that but ONE BID shall be made; and in all cases where the Stocks or Bonds shall be struck down on their reserved bid, the fact will be publicly announced that no sale was made.

Reporters for the Press will by this method not only be enabled to report real sales, but also the prices offered for such as are not sold.

ADRIAN H. MULLER & CO., Auct'rs.

WINSLOW'S PATENT COMPOUND RAIL.

THIS RAIL ,which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are,—a saving in the wear and tear of Machinery—it saves to a great extent in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable. Being practically a continuous Rail for the entire length of the Road, without break at the ends of bars the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effect upon cars and machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at HANGING ROCK IRON WORKS, upon the Ohio River, and at MT. SAVAGE IRON WORKS, Maryland. Specimen of the Rail and patterns of same will be gladly shown, as well as all information in relation thereto, given by application to

LIGHTNER'S
PATENT AXLE BOXES
FOR RAILWAY CARS.

THE attention of Railway Managers and others is respectfully called to this great improvement in

AXLE BOXES,

As possessing numerous advantages over all others now in use. Some of which are:

1st.—The first cost and "fitting up" is much less.

2d.—It saves seventy-five per cent. in oil.

3d.—The journals and oil are perfectly secure from dust.

4th.—It prevents all possibility of "*heating.*"

5th.—Cars furnished with them run much easier, and require less power to move them.

6th.—Its construction is simple—not liable to become loose by service, and allows a free inspection of the journals and boxes.

7th,—The composition bearings of an eight-wheel LOADED car, can be removed from the journals while under the car, and returned in twenty minutes, by ONE man.

8th.—The trucks and wheels are free from oil and dirt usually seen on Railway cars.

The following testimonials are submitted :—

OFFICE BOSTON AND PROVIDENCE R. R.
Boston, January 1st. 1853.

Mr. JOHN LIGHTNER:

Sir:—It affords me pleasure to say, that after three years trial of your boxes, I am fully and entirely satisfied of their superiority over any other pattern we have used. This superiority consists in economy of oil and freedom from "heating."—I have tried every pattern of box in use, of any note, and do not hesitate to say, that you have devised one which in every respect combines greater advantages than any other within my knowledge; these advantages are so manifest, that I am fitting up all our cars with your boxes, as fast as practicable. Very respectfully yours,

W. RAYMOND LEE, Supt.

The Subscriber begs leave to suggest to all Railroad Corporations (new or old) the importance of an EARLY application of this valuable improvement, to their NEW CARS, WHILE IN PROCESS OF CONSTRUCTION· as thereby much detention of cars, and great expense will be avoided.

Models and testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same with the subscriber.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville. They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars. We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,

au4tf. Muskingum Works, Zanesville, O.

WHEELBARROWS!

ON hand, Wheelbarrows, of my own manufacture, suitable for Railroad, Turnpike, Canaling, &c., in lots, to suit purchasers. Orders filled for any reasonable amount

HENRY ROCKEY,

No. 21 East Front street

J. DAVENPORT....M. D. WELLMAN....C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,

Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburg, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel, or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass, I feel confident, that perfect satisfaction can be given in all work entrusted to our care

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States. JOSEPH DAVENPORT.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincionati and Daytou that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m. in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibusos will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

ST JOHNSBURY, VT.

TESTIMONIALS:

OFFICE OF THE G. & C. U. RAILROAD CO.,
CHICAGO, FEB. 20TH, 1854.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—All of the principal station buildings on this road are furnished with your Depot and Platform Scales, with the exceptions of two scales. Your Scales were adopted after trial with those of other makers, and I take pleasure in now saying, that after more than four years trial, they have given entire satisfaction to us, and the public doing business with the Company.

I am not aware of a dollar's expense being incurred from wear or defect of materials in any part of the scales. The Track Scale, with suspended platform, which you have recently put into our principal depot at this place, judging from present appearance and the use to which it has been put, will, I doubt not, answer the purpose desired, and be equally satisfactory.

JOHN B. TURNER,
Pres't and Sup't.

CENTRAL RAILROAD CO.
SAVANNAH, JAN. 6TH, 1853.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.

DEAR SIRS:—Your Scales, which we have used for many years, gave so much satisfaction, that we ordered from your House, all the Scales necessary for our large new Warehouse. Your agent has just finished putting up twenty-two of your No. 1 and No. 2 Depot Scales and a large Road Scale, and I am pleased with the manner in which the job has been done. I trust and believe that this work will do credit to your establishment.

Respectfully, your obedient servant,
R. R. CUYLER, Pres't.

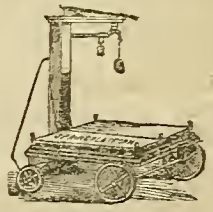
PORT RICHMOND, PA. MARCH 2D, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.,

GENTLEMEN:—There are now in the Richmond Wharves at the terminus of the Reading Railroad, Twenty-six of your ten ton Track Scales, which have been in constant use for more than six years. The least quantity of Coal weighed annually upon any one wharf has been 400,000 tons. The aggregate quantity weighed upon the twenty-six scales, has been more than one million two hundred thousand tons per annum.

During the time since they have been in use, they have always retained their adjustment without any expense for repairs. They have been tested every year by the Sealer of Weights for the county of Philadelphia, and always found correct, and at the present time their operation is apparently as perfect and as sensitive as when first built.

JOHN E. HOBERT,
Superintendent of Wharves.



STATE OF NEW YORK,
CANAL COMMISSIONERS OFFICE,
ALBANY, JUNE 21, 1852.

MESSRS. E. & T. FAIRBANKS & CO.,

GENTLEMEN:—Your favor of the 10th, asking my views of the Weigh Lock Scales, manufactured by you, and introduced upon the Erie Canal, is received.

I have no hesitation in saying, that they have fully answered your recommendation in every particular. Their capacity for strength is fully equal to sustain the required burthen. They are not liable to get out of adjustment or repair. The arrangement of the Weighing Beam is admirably adapted to obtain rapid results. I know of no Scale superior to them, in this or any other country.

In great haste, Yours truly,
JOHN C. MATHER,
Canal Commissioner.

CONDITION AND PROGRESS OF NEW RAILWAYS IN THE WEST.

We have seen several floating paragraphs in newspapers, both in the East and West, stating in substance, that several of the Western railways had stopped, or suspended work. we know of no roads *actually commenced* which have stopped or intend to stop, or have been more than partially suspended, except one or two in Kentucky. The Maysville and Lexington Railroad, we are told, is suspended for the present. The Louisville and Nashville line is suspended, except, we believe a section of 32 miles, and that is to be finished. The Hillsboro' road, beyond Hillsboro', is suspended for the present, but as that and the Marietta line are now one, in fact, it is not a suspension but simply a delay in making one branch, till the other is finished.

With these exceptions, we are not aware that any stoppages of Railways, actually commenced, have taken place, or are likely to take place, at least in the valley of the Ohio.

To go into particulars, we will mention the present condition of several of the leading lines within our own knowledge:

1. The *Ohio and Mississippi Railroad*, is opened 26 miles, and will be opened in a few days, 60 miles further, to the intersection with the Jeffersonville Railroad, making a continuous and convenient railway connection (of almost 135 miles in length) between Louisville and Cincinnati. We recently noticed the fact that the Company had disposed of its 2d Mortgage Bonds, on such terms as secures the completion of the road at an early date.

We are informed by the parties interested, that from the *beginnings* of business, between Cincinnati and Aurora, there is enough known to make it clear that the business upon this road will be quite as great as it was ever estimated at, and that the stockholders are eventually to realize profits, equal to those upon any road in America.

2. The *Cincinnati Western Railroad* has been stopped, by the newspapers, two or three times, but no such event has happened here. Three days since, we happened to ride by the tunnel of the Western Company, through the ridge between the western branch of Mill Creek and the Miami. Quite a large number of Erin's exiles were there, hard at work and the tunnel seemed to be quite alive.

The Western Company considered merely as landholders, have an immense amount of valuable real estate; and although that is not money, it is *money's worth*, as any man can find hy attending sales in Cincinnati. The Western Railway, if completed, goes through a very productive country.

3. The *Cincinnati and Marietta Railway*, (now united with the Hillshorough), is not only alive but rapidly progressing; 22 miles from Chillicothe to Greenfield is now in operation, and all that part from Blanchester on the Hillshoro' road to Hamden, in Vinton county, a distance of 70 miles, (exclusive of the Greenfield section), is nearly graded, and between Chillicothe and Cincinnati, is expected to be in running order by the 1st of August. This Company undoubtedly would like to sell their honds, to finish their entire line speedily; hut they have great actual capital, and an availahle *home* credit. The city of Cincinnati has just loaned them $150,000 and we understand that near $500,000 have been raised along the line, in stock, and domestic honds. With such active and suhstantial aid the work will go on to completion with reasonahle speed.

4. The *Cincinnati, Wilmington and Zanesville Line*. This road is one of the most promising in the country. The part between Lancaster and Zanesville, we learn, is rapidly constructing, and the whole line will he finished during the summer.

5. The *Central Ohio Railroad* is finished to Cambridge and we hear is going on with a strong force between Cambridge and the junction with the Baltimore and Ohio Railroad.

6. The *Cincinnati and Dayton Short Line*. This has been stopped, by the newspapers, but is alive and hearty, and likely to grow up to maturity. Some weeks since the contractors on this work had a good deal of difficulty, and for a few days suspended work, but about ten days since, the work was recommenced, and we have heen informed, will go on to completion.

The *Great Tunnel* is a great affair, and if completed, (of which we never had a doubt), will he one of the most interesting monuments to our railway enterprise. We believe that, including the approaches, the heading has been carried in ahout 3,500 feet, or one third the whole distance.

7. The *Cincinnati and Cleveland Short Line*. We do not know in precisely what condition the work on this line is; but we know that the part recently let to Goodhue & Co., between Xenia and Delaware, is in the hands of an able, upright and enterprising firm, who are very likely to carry through what they undertake. We hear that the Company have heen quietly getting large local suhscriptions, between Delaware, Mansfield and Cleveland, with the prospect of soon putting the residue of the line under contract.

8. The *Dayton and Belpre Railroad*. Sixteen miles of this railway, hetween Dayton and Xenia, have heen recently opened, and we are informed the work east of Xenia is progressing finely.

9. The *Pittsburgh, Steubenville and Cincinnati Railroad* is reported to he in progress between Pittshurgh and Coshocton.

10. The *Cincinnati and Pittsburgh Railroad via McConnelsville*. We are informed this work is constructing hetween McConnelsville and Camhridge.

11. The *Cleveland, Zanesville and Cincinnati Railroad* was recently opened 50 miles hetween Akron and Millersburg, Holmes county.

12. The *Clinton Line*, east and west is, we helieve at work with fair prospects.

13. *The Franklin and Warren, or Broad Gauge Road*, between Dayton and the Pennsylvania line, at Jamestown, 240 miles, is all under contract and progressing rapidly.

14. The *Little Miami Railroad, Second Track*, is progressing steadily. The Company expect to reach Morrow, 36 miles, this season. The completed double track, hetween Cincinnati and Plainville is a most beautiful piece of work. We know not where so fine and solid a track can be found. Indeed, as to either construction or management, very few of the Eastern railways can compare with the Little Miami.

15. The *Cincinnati Hamilton and Dayton* is preparing to lay a second track to do its increased business, and we presume will ask the money public for some ready means. They will no doubt get money readily.

As a closing illustration of the progress of Western railways, at least in Ohio, we give the following table of miles opened this spring:

Ohio & Mississippi Railroad,	26	miles.
Cincinnati & Marietta, - - -	32	"
Cincinnati, Wilmington, & Zanesville, - - - - - - - -	60	"
Central Ohio, - - - - - - -	30	"
Dayton & Belpre, - - - - - -	16	"
Cleveland & Zanesville, - -	50	"
Ohio & Indiana, - - - - - -	25	"
Aggregate, - - - - - - - -	229	"

Here are two hundred and thirty miles of railway *opened* this spring in the midst of all the croaking; and to this may be added, that fully five hundred miles more will he opened this summer.

Croakers must wait a long while, before they will see the progress of railways in the West arrested, however great may he their cavilings, croakings or threatenings. The fact is, there are more ways than one to raise money for railways, and we will suggest one for the benefit of Wall Street: If flour is nine dollars a barrel, and heef twenty cents per pound in New York, where goes the money? Can not Wall Street realize that the West is levying an enormous tax on the capital of New York, Boston and London? Is not that a very sure way of getting money for railways? Ohio has what is equivalent to *three millions of barrels of flour to sell to New York, Boston and New Orleans*. In 1852 she sold that for *twelve* millions of dollars. In 1854 she sells it for *twenty millions!* She has gained, therefore, in the midst of all this croaking and threatening, *eight millions* of dollars on *one article* beyond what she had in 1852, when railway bonds sold everywhere and anyhow. Can not Wall Street see how this works? The capitalist in the first instance *lent* the money; now he must *pay* it in the shape of a solid tax on his profits; and he *must pay it to the Western farmer, who in fact, makes the railways*. How vain and puerile, then, to say, as some of our Eastern cotemporaries have said, you *must not*, and you *can not* make any more railways! It is ridiculous to say this to a people who could, if they pleased, make all the railways out of their own surplus capital. It is true that it is not the most convenient way to do it. If it were, there would he no use for bankers and brokers, whose profits are wholly made hy transferring capital from those who prefer to lend, to those who prefer to borrow.

On the whole, our Western railways are in a very healthy condition, and those which are in progress will go on to completion, and many of those which have been recently planned will ultimately he made. The Northwestern states will in a few years have fifteen thousand miles of railway.

MANASSAS GAP RAILROAD.—It is announced that the Manassas Gap Railroad Company have put under contract the line of the road from their depot at Jones' Point, in Alexandria, to Gainesville, a distance of 34 miles; and the Loudon Branch Road which diverges at a point on the main stem of the Manassas Gap Railroad, 21 miles from Alexandria, and extends to Pursellville, a distance of 27 miles, which is only 16 miles from Harper's Ferry.

The Alexandria *Gazette* says—this link when completed, and it will he prosecuted with vigor, will put Alexandria in immediate connection with Wheeling, and connect it with the Winchester and Potomac road, which is 32 miles in length, making the distance from Alexandria to Winchester by railroad 96 miles.

The population of Alexandria, Va., in the last three years has increased over 37½ per cent, and it now contains about 12,000 inhahitants.

HONDURAS RAILROAD.—Mr. Edwards, President of this Company, has arrived at Mohile, and reports that the Congress of Honduras has ratified the contract granting to the Company two and a half million acres of land to aid in the construction of the road.

Railroads.

SHELBY, KY., RAILROAD COMPANY.

We have a copy of the "Third Annual Report" of this Company before us from which we extract the following, viz:

There have been engaged in the construction of the Road, within the last fiscal year of the Company, nine different contractors, embracing the entire line from Hobb's Depot, on the Louisville and Frankfort road, to the depot in Shelbyville, In consequence of the increased prices of labor, materials, and provisions, and the advanco of iron, the contractors were advised that the Board would not require the completion of their contracts within the times stipulated. Within the last year the aggregate amount of work has reached the sum of $77,971 60, consisting of grading, culvert masonry, and about two hundred and fifty feet of tunnel drift.

The location estimate for the grading of the entire line of road to Shelbyville was $215,000; which would have enabled the Board under former contracts to have finished the grading of the whole distance from Hobb's Depot to Shelbyville, but for the recent inflation of prices of all things connected with the construction of the road, and the failure of one of the largest contracting parties, to carry out their engagements.—Against this company the Board have instituted suit to enforce, as far as practicable, the stipulations of their contract.

The total amount expended by the Board for construction, (exclusive of the capital stock taken by contractors under their contracts), for instruments, engineering, and the right of way, office rent, stationery and contingent expenses, etc., is $80,700 63; and there have been collected $75,689 73—and remaining in the hands of the subscribers upward of three-sevenths of the original amount subscribed."

At the August term, 1853, of the Shelby county court, upon the motion of the President of the Louisville and Frankfort Railroad Company, an order was passed calling for an election for the purpose of taking the sense of the voters of the county upon a proposition to subscribe for 10,000 shares of the stock of this company, $500,000 in bonds of the county of $1000 each, having 30 years to run and bearing interest at the rate of 6 per cent; the issue of these bonds to be contingent upon a subscription by the city of Louisville for 200,000 shares of the said stock. The result of the vote was favorable in Shelby county; the city of Louisville has not yet acted upon the question.

This road will pass through and near the following counties, with a population, in 1850, and wealth as exhibited by the returns of the Assessors for 1853, as follows:

	Population.	Taxable Property.
Jefferson	69,831	$43,106,310
Shelby	17,095	11,551,982
Spencer	6,842	3,513,341
Anderson	6,260	1,996,270
Mercer	14,067	5,262,810
Boyle	9,116	5,716,318
Lincoln	10,093	6,203,083
Pulaski	15,195	2,118,619
Whitley	7,447	560,478
Garrard	10,237	4,938,632
Washington	12,194	4,331,118
Jessamin	10,249	5,629,704
Casey	6,556	1,026,372
Rockcastle	4,697	712,597
Marion	11,765	4,436,757
Laurel	4,145	531,615
Knox	7050	957,656
Wayne	8,692	1,764,564
Russell	5,349	936,726
Adair	9,898	1,747,017

With a portion of Franklin, Woodford, and other counties, beside portions of Western Virginia, and Eastern Tennessee adjacent to this road, containing a present population exceeding 300,000, with an aggregate wealth of near $150,000,000—not taking into consideration the mineral wealth of the southeastern portion of Kentucky, all of which will be mostly tributary to this road, if made, and will pour their agricultural products, coal, iron, and lumber, into the lap of Louisville.

The road from Cincinnati to Danville will shortly be finished. The last Legislature of Kentucky chartered a company to construct a railroad from Danville in the direction of Knoxville, Tennessee, by which Cincinnati will be placed in direct connection with all that productive region, and concentrate it at Ohio's cherished city.

The charter of this Company has been so amended as to permit of the road being consolidated with any other line, or sold to any other Company.

Ohio and Mississippi Railroad.—The annual election of this company for Directors, resulted in the appointment of the following gentlemen :

James C. Hall, Charles Stetson, John Baker, Eden B. Reeder, Charles W. West, Thomas Phillips, Richard W. Keys, Charles D. Coffin, Nathaniel Wright, Jethro Mitchell, George W. Cochran, Henry H. Goodman, John Slevin, Cincinnati.

Abner T. Ellis, Cyrus M. Allen, John Ross, Vincennes, Indiana.

John Cabb, Thomas Gaff. Aurora.

Meda W. Shields, Brownstown, Indiana.

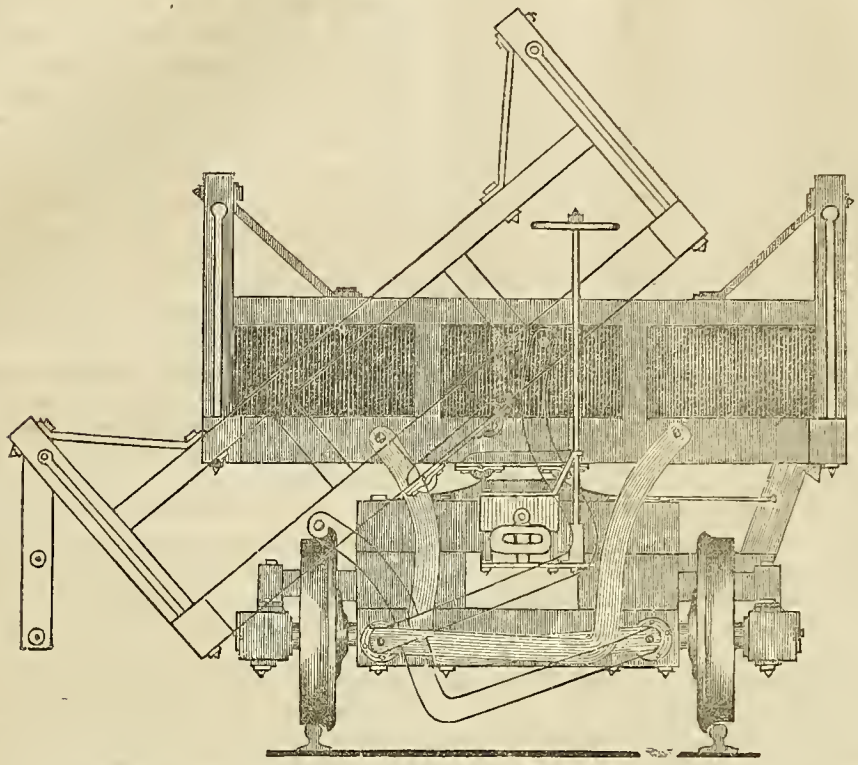
Hagerman Tripp, Vernon, Indiana.

Richard A. Clements, Washington Co. Ind.

On Tuesday evening last, at 10 o'clock, the last rail was laid upon this line, between Cincinnati and Seymour, upon the Jeffersonville road, thus completing a railroad connection hence to Louisville, of some five hours in time. Regular trains will be established forthwith.

Mobile and Ohio Railroad.—We are pleased to learn that this important thoroughfare is being pushed forward at the rate of three-fourths of a mile per day; some 55 miles from Mobile being already completed.

Hannibal and Peoria Railroad, Ill.—From the Hannibal *Messenger*, we learn that W. G. Wheaton, Esq., the engineer of this road, had returned to that place on the 18th ult., having completed the survey of the entire line, 130 miles. He has not yet made his full report, but the *Messenger* learns, that 35 miles of the road, and the work at the crossing of many of the rivers, will be heavy. The remainder will be about the average of Illinois roads. Extensive coal fields are found along the line. We spoke of this line on page 130, vol. 2, of the *Record*, giving some additional particulars.



This will be a valuable extension, eastwardly, of the Hannibal and St. Joseph Road, and will receive aid and assistance from that Company, if, indeed it be not built entirely by it.

Scioto and Hocking Valley Railroad.—The Directors of this Company, have recently had a meeting, at which the contractors—Messrs. Seymour, Moore & Co.—were present. Satisfactory arrangements were made for the vigorous prosecution of the work, notwithstanding the stringency in the money market. The contractors have done work to the amonnt of near $450,000, and have only collected, from all the subscriptions, about $100,000. The arrangements made, are to extend the road from Jackson to McArthur, and from Newark to Somerset, the present season.

The South Western, Ga. Railroad.—This well conducted company, says the Albany Patriot, has its road completed to Oglethorpe, 50 miles, and it is secured to be completed, this coming fall, to Americus, 20 miles from Oglethorpe, and within 33 miles, by a direct line, of Albany. The country between Americus and Albany is very level, and favorable for the construction of a road, and we do not doubt that the joint efforts of our citizens and the company, can easily complete the work to this point within two years of this time.

Toledo and Chicago Air Line Railroad. This line, a continuation of the Junction Ohio road westwardly, via Maumee and Perrysburg, in Ohio, and Goshen and the Northern Indiana road in Indiana, and thence to Chicago, is progressiug rapidly. It crosses the Southern division of the Cleveland and Toledo road some eight miles east of Toledo, making the distance from Sandusky City to Chicago 277 miles. At Maumee, it crosses the Maumee river and the Dayton and Michigan road. From Maumee to Swan Creek, 14 miles, the road is completed; the remainder is being worked energetically, and will be prosecuted to completion without delay.

BAILEY'S NEW PATENT "DUMPING CAR."

It affords us much gratification to call attention of parties interested, to this valuable improvement in the way of "dumping cars," for railroad purposes, whether for construction or such freight as coal, lime, plaster, etc.

It has many prominent advantages over the ordinary "rocker car," such as being much more rapidly and easily dumped; requiring but a single man for that purpose with the largest car; having a greater inclination when dumped; being much safer from accident; is simple in its construction, consequently not liable to get out of order, and much more economical in both labor and time.

The principle upon which it operates is very simple, and it is in this very simplicity that its manifest superiority consists. In the cut above, the car is represented in two different positions; the first, in dark lines, shows the car ready to receive the load; the other, in outline, shows the car dumped, and the angle at which it rests in that position. The body of the car rests on the ends of two wrought iron transverse bars, the opposite or lower ends of which are attached to the frame of the truck; these bars also operate as guides in dumping the car. Such is the accuracy of the action of these bars upon which the car rests, that one man can, with more safety to himself, dump a long, eight wheeled car, and with more ease and more quickly than ten or twelve men can one of the common rocker cars; the saving thus made in time and labor is estimated at not less than two cents per yard. Its simplicity, with the fact that there is but little *cast* iron about it, obviates, in a very great degree, all liability to get out of order, thus preventing the expense delay and loss of time so common with the cars now in use.

It has been submitted to the inspection of a number of prominent railroad men, and tried upon several roads, in every instance it has met with decided approbation and proved itself worthy of all the commendation bestowed upon it.

With Mr. Bailey, the Patentee, we have no acquaintance; but we can commend Mr. Geo. L. Chase, the sole agent for the U. S., for these cars, to the confidence of our readers. His address is Columbus, Ohio.

Nortwestern, Penn., Railroad.—We learn by the Butler *Herald*, that the construction of this important road to Western interests has been let to Messrs. John Clark, M. Malone, B. B. Gouder and Israel Painter. The work is to be let by them to others, on the 17th inst. The *Herald* says: The contractors are men of much experience, of large responsibility and high reputation. The work is to be pushed through with all the force and rapidity which can be put upon it. The road is to be completed and put in running order from Blairsville to Freeport, on or before the first of October, A. D. 1855; and to New Castle, on or before the first day of May, A. D. 1856..

Illinois Central Railroad, Eastern Branch.—This branch of this extended road is now open to Lodi, some 98 miles south of Chicago.

Wheelbarrow Manufactory.—There are few branches of mechanical industry which are not carried on in Cincinnati. We were the more strongly impressed with this truth on visiting Mr. Rockey's establishment for the manufacture of Wheelbarrows, for railroad, canal and other similar purposes, by steam machinery, by which means they can be afforded at a comparatively low price.

This establishment, one of the most extensive and admirably arranged in the Union, and the only one of the kind at the West, is located on the Hamilton road, at the head of Vine street. The premises are large and commodious, and furnished with labor-saving machinery of the most modern kind; among which we note a novel swing saw for cutting the timber; lathes for turning the hubs, rims, etc.; machines for cutting felloes without need of patterns; apparatus for shaping the boards of the bottoms and sides of the barrows also; tenoning, boring, mortising and punching machines; in fact every facility for manufacturing cheaply and effectually, all driven by a thirty horse power engine.

The large number of railroads, and other building improvements, now going on at the West, has caused a demand for the barrows. Mr. Rockey has so arranged his business as to be prepared at all timee to supply any orders that may be sent him. We commend him to railroad officers, contractors, and otbers in want of barrows, and sincerely trust that be will meet with the success his enterprise so richly merits.

Cairo & Fulton Ralroad, Ark.: Election of Officers—The following gentlemen were elected Directors of this Company, at Little Rock, on the 15th ult., viz: Daniel Ringo, Andrew J. Hutt, Roswell Beebe, of Pulaski county; S. W. McNeely, of Sevier county; Edward Cross, of Hempstead county; H. K. Hardy, of Clark county; Robert Martin, of Dallas county; Green B. Hughs, of Saline county; H. C. Dye, of Independence county; James Robinson, Thomas Hough, of Jackson county; James Russell, Randolph county; Israel M. Moore, of White county.

The board of directors met at their office, on the 16th and organized as follows: Roswell Beebe, President; Daniel Ringo, Vice President; William B. Wait, Treasurer; Basil C. Harley, Secretary; James S. Williams, Chief Engineer.

The gauge of this road has been fixed at 5 feet 6 inches, to correspond with that of the states of Missouri and Texas. The surveys are proceeding rapidly; Mr. Williams hopes soon to be able to give an accurate estimate of the cost of the road completed.

Tubular Iron Bridge.—The construction of the great tubular iron bridge across the St. Lawrence, opposite Montreal, has commenced. One of the immense coffer-dams, made of timber, in which the piers are to be built, was launched yesterday and towed to its place, and others are in progress. Some 1500 men will, it is said, be employed on the bridge the coming summer.—*Burlington Free Press.*

SURVEYS OF RAILROAD ROUTES.

From a recent letter of J. S. Williams, Engineer in Chief of the Cairo and Fulton Railroad, to Roswell Beebe, Esq., President, we extract the following upon the subject of railroad surveys. He says:

The system of railroad improvement is, at this day, so perfectly established, that any argument in its favor may well be deemed superfluous—still as the subject is new to many of the stockholders, it may not be inappropriate for me here to illustrate some of the general principles which should govern in the surveys for railroads, and some of the practical benefits resulting from their introduction.

The perfect line for a railroad, the trade being equal in both directions, would be absolutely straight and level. The object of a survey is to ascertain how nearly this perfection can be approached, and the question is, for what reasons and how far the engineer is authorized to deviate from this straight and level line; what obstacle shall drive him from it, what considerations shall induce him to leave it. The subject being purely economical in its bearings is reducible to strict calculation.

To illustrate it a case may be supposed of a road connecting two points 100 miles apart. For some reason the line has been made 101 miles long. Now to ascertain the consequences—the penalty incurred, by thus increasing the distance one mile.

The income of a road 100 miles long, assumed at $500,000, would be $505,000, with the same amount of business on a road 101 miles long; that is to say, the increase of distance imposes a perpetual tax upon the community of $5,000 per annum over and above what their expenditure would have been had the road been only 100 miles long. This annual expenditure represents a capital of $62,500 at 8 per cent. interest. This amount, of course, increases with the business of the road. Were the income $600,000, every mile of increased length would impose a tax of $6,000 per annum, representing a capital of $75,000. Air lines are demanded on many routes where some of the best roads have been in successful operation for years, because the people have become weary of paying this unnecessary tax and incurring loss of time.—The engineer is the custodian of the interests of the public as well as those of the company. He is derelict in duty, unless he can show cause for deviating from direct routes, either in obstacles encountered, or in inducements to gain for the company the advantage of a local trade; the latter consideration can hardly prevail, for it is impolitic and unjust to make a whole community bear a burden for the advantage and furtherance of local interests—to destroy the integrity of the character of a line, as a great thoroughfare, by bending it to individual purposes. Such cases are always better met and provided for by building branch roads.

The question of grades, one of vital importance, is different from the question of the *trace* of a road. In the latter, as I have endeavored to show, the customers of the road are implicated, in the former the company is mainly interested. It costs the *company* about $15 to carry 1,000 tons of freight one mile on a level; every foot of inclination adds to this the cost of power requisite to overcome a part of the gravity of the load. This will be understood from the following table of the effective power of a locomotive engine on planes of various rates of ascent:

An engine drawing on a level at a low rate of speed	600 tons,
Will move on an inclination of ten feet per mile	424 tons
On an inclination of 20 feet	324 "
" " " 30 "	240 "
" " " 40 "	214 "
" " " 50 "	181 "
" " " 60 "	156 "

The rule is not absolute, it is subject to many slight modifications which result from the kind of track, the rate of speed, the construction of the engine. It serves to prove the economy of low grades. At an ascent of between 20 and 30 feet per mile the cost of moving a ton is double the cost on a level.

FOX & WISCONSIN RIVER IMPROVEMENT.

It is very generally understood that steamboats are now making their daily trips from Green Bay to Kaukana, a distance of 20 miles, From this place to Menasha 15 miles, passengers and freight have to be transported by land over plank road. Along this 15 miles are numerous rapids around which canals have to be made, and here it is that the heaviest work is to be done. At Kaukana the canal is about a mile and a quarter in length, and a fall of about fifty feet to be overcome, which is done by six locks. These are now nearly ready to put in—pits all dug, and abutments nearly completed, with a goodly number of men employed.

At Little Chute, four miles above, another canal of about a mile in length, with four locks, is in a forward state of progress, and at Grand Chute the excavation for about a mile of canal is nearly completed, a breakwater of 700 feet built, and the lock pits and abutments progressing as fast as men can be employed to push it forward. At Menasha the requisite force has not yet been put on; but it is expected that the work on this section, leading into Lake Winnebago will soon be again renewed and the whole completed so as to be ready for the opening of navigation in the spring of 1855.

The whole length of canal necessary to secure a steamboat communication with Lake Winnebago, is about 5 miles. It is 100 feet wide on the bottom, and 120 at the top, (two feet wider than the famous Welland Canal.) The locks are 40 feet wide by 160 long, built in the most permanent manner, of solid stone masonry, and in a style that will not suffer in comparison with any similar work in the Eastern states. It is calculated that, with the improved manner of working these locks, a steamer can pass each in the short space of three minutes.—*Fond du Lac Herald.*

MAY A RAILROAD PASSENGER BREAK DOORS? The right of travelers upon Railroads to take possession of seats in the cars by force, has recently been decided in the Court of Common Pleas, in New York City. The *Times* says that the New Haven Railroad Company sued a Mr. William M. Abbott for damages, in having broken into the rear car of the train while the door was locked. The Company, it appears, has a practice of fastening the doors of the rear car, in order to reserve seats therein for commuters and others after the remaining cars are filled. In this case, the defendant went on board at Rye, Westchester county, intending to go to New York, and finding the door locked, and being unable to procure a seat in the forward car, kicked open the door and helped himself to a seat. The Court ruled that if the passengers on a railroad can not find a seat, they are entitled to take forcible possession, and that the Company is bound to afford sufficient accommodations, and ample time for ingress and egress. The jury returned a verdict of *twenty-five cents* damages for the plaintiffs.—*Sandusky Reg.*

THE AIR-LINE RAILROAD.—The cars are now running over this road to Swanton, a little more than half way from Toledo to our place. We are informed that it is expected to be completed as far as Delta, by the first of July. This will be a great benefit to most portions of our country, by shortening the travel over that public nuisance, called a "Plank Road." The road is smooth, level, and durable, and we see no reason why it will not be as profitable as any other one in the state. A train leaves Swanton daily at 8 o'clock, A. M., and arrive at Toledo, in time to go east or west.—*Ottokee Union.*

THE NEW SUSPENSION BRIDGE AT NIAGARA FALLS—This stupendous structure, under the supervision of Mr. Roebling, as engineer, is progressing with as much speed as so ponderous a work can, regard being had to its strength, durability and safety. The massive cables for the passage and carriage bridge are nearly completed, and the timber work is all in readiness to be suspended. It is expected to be so far completed as to pass teams, passengers and freight in July. The Railway bridge will not probably be ready for the cars before October.—*Niagara Falls Gazette.*

GALENA AND CHICAGO UNION RAILROAD.—This Company has resolved to increase its capital stock twenty-five per cent on the 1st of June, and twenty per cent on the 10th of August, making an aggregate of 50 per cent on the present capital, as will be seen by the following statement:

The total amount of capital stock provided for will fall short of $2,800,000 on the 1st of June next, but for the purpose of an estimate that sum is assumed.....	$2,800.000
Add increase of June 1st, 1854, 25 per cent in Cash.....	700,000
Add increase of August 10, 1854, 50 per cent Donated on, say $3,500,000, is.....	700,000
Making the total amount of stock.....	$4,200,000

Entitled to dividends from and after August 1st, 1854, if converted as above provided.

CHARLESTON AND SAVANNAH RAILROAD.—The Savannah *Republican* says that the subscription by the City Council of Charleston, of $260,000 to the Charleston and Savannah Railroad has placed the completion of a railroad connection between Savannah and Charleston, beyond doubt or uncertainty.—The corps of Engineers having surveyed three different routes, have now left the field for office work; and the Chief, Mr. McRae, is preparing his report that will determine the selection of route.

The Opelika Railroad will be finished this year, and the direct road from Charleston to Wilmington, will be completed during the next year. Thus, in a short time, the seaboard line, passing through Charleston and Savannah, will be completed to Mobile, within a period of three years. There can hardly be a doubt, that the road from Columbus to Mobile, will be opened within that period.

Communications.

For the Railroad Record.

FORT MADISON AND MISSOURI RIVER RAILROAD.

Ed. Record:—The above-named road, it is confidently expected, will be put under contract within a month or so. Negotiations for letting it are pending, and are expected to result favorably. This letting is to extend only so far as Bloomfield. Its continuation to the Missouri river will be commenced soon after the other portion is under contract. The road, according to the judgment of contractors who have examined the ground, promises to be a rich paying road. The Southern Tier counties of Iowa—through which this road is to pass—being of the very best agricultural character, are receiving their full share of the immense immigration which has poured into Iowa for the last twelve months. The land offices are crowded, the receipts, daily, being from five to ten thousand dollars. Soon no land will be left belonging to the general government, in southern Iowa.

The people of the "Southern Tier" are becoming restive for want of an outlet, and their surplus profits and ample means brought with them are being turned into railroad stock which will soon be returned to them with great profit.

So soon as the road is put under contract you shall hear from me again, if I am not too troublesome to you, when I will give some statistics of the business, wealth, and prospects of the several counties of Iowa composing the "Southern Tier."

Yours,

May 26, 1854. R.

Ohio River and Wabash, or the Vincennes and Paducah Railroad.—We learn that the surveys of this road are completed, and a most excellent line has been obtained—one that will compare favorably with the best lines of railroad in Illinois. The maps, profiles, and estimates, and everything necessary for the letting of the road in a few weeks will be prepared. The Directors have, by appropriate resolution, expressed their approbation of the highly efficient manner in which the corps of Engineers in their employ on this work have discharged their duties. It is the intention of the Company in a short time, to place the whole line of road under contract, and press the work with energy to a final completion.

Milwaukee and Mississippi Railroad opened to Madison, Wis.—On the 23d ult., a great Railroad celebration was held in Madison, the capital of Wisconsin, on account of the opening of the roads from Milwaukie and Chicago to that place. A train of thirty-seven cars, drawn by three locomotives, with 1500 passengers, entered the depot at that point.

Baltimore and Oaio Railroad: Progress of Railroads.—There is scarcely an instance within our knowledge wherein the progress of the "railroad spirit" is more aptly depicted than in a letter from D. N. Coleman, Esq., to the Wheeling *Intelligencer*, which contains some very interesting remeniscences of the Baltimore and Ohio Railroad. In 1829, Mr. Coleman was one of a party of gentlemen on the occasion of a pleasure trip by members of Congress and others, from the depot to the first stone bridge, *about two miles*. Thousands of citizens were out to witness the scene. Doubts were entertained as to the practicability of railroad enterprises—most men predicted a failure of the system, there being, at that time, no completed railroad in the Union over two miles long.

An application had been made to Congress for aid and favor, and the excursion was proposed that members of Congress might see and judge for themselves.

A railroad across the mountains was then deemed visionary, if not impracticable, on account of cost, and length of the route. Now, under date of May 16, Mr. Coleman writes as follows:

I have just come over this road for the first time and pronounce it the most splendid triumph of genius and perseverance over natural obstacles, which is to be found in our country. I have traveled over 379 miles in 18 hours, seated on velvet cushions in a comfortable car, reading my papers and chatting with friends. I have viewed the grand scenery of Maryland and Virginia in passing; equal to any in the Union, for beauty and sublimity, and have ten times passed through tunneled mountains. Such a journey through Maryland and Virginia, is calculated to excite pleasurable emotions in any mind, but especially in that of a son of a Virginia father and Maryland mother—holding in sincere veneration the birth-place of his ancestors.

But sir, I admire the conquests of talent everywhere, and shall with most decided pleasure hail the accomplishment of all our great enterprises, as I do now hail that of the Baltimore and Ohio Railroad.

I have lived to see the dream of my youth perfectly realized, as to this great work—not quite as soon as I anticipated—but realized.

Memphis and Ohio Railroad.—We learn that Messrs. Harris, Black & Co., of Boston, the enterprising contractors on the New Orleans and Ohio road, (Paducah Branch of Mobile and Ohio road), have taken the contract upon the Memphis and Ohio road from Memphis to the crossing of the Mobile and Ohio road, 85 miles, to be completed as follows: 30 miles by July, 1855, 50 miles by October. 1855, and the whole by May, 1856. This road is in the hands of thorough-going business men, who will have the remainder under contract as soon as the means have been secured.

☞A majority of the Common Council of the city of Albany have voted to loan $300,000 to the Albany and Northern Railroad.

Air-Line Railroad from Norfolk to New York.—A meeting of New York capitalists was held at the Astor House on Wednesday, to put in motion the machinery for the construction of an air-line railroad from New York to Norfolk, which will materially abbreviate the traveling distance between these two cities. The route is to commence at the shore of Raritan bay, directly opposite the Narrows, whence it will proceed in nearly a strait line across New Jersey to Cape May, which will be crossed for a distance of twelve miles to Lewes, in Delaware, whence it will run by an air-line to Cape Charles, opposite Norfolk. The whole traveling distance from New York will be less than three hundred miles, which it is said can easily be traversed in ten to twelve hours. We do not much fear that this line, with its six transhipments of passengers and baggage, and thirty or forty miles of bay navigation, subject to all the disagreeabilities and interruptions of tempestuous weather, will ever seriously interfere with the continuous railroad route through Baltimore and Philadelphia. The Hon. R. Franklin and Mr. Smith, of Maryland; Dr. Francis Mallory, Hon. C. S. Layton, J. W. Houston, Robert J. Walker, and Messrs. Simpkins, Hutchins, Chatwood, Gould, Edwards, and Squier, participated in the meeting at the Astor House. An executive committee was appointed, to carry ont the object in view, consisting of the following gentlemen:—Messrs. Charles Gould, James P. Allaire, Francis W. Chatwood, William Torrey, Avery Edwards, Silas Seymour, and Hon. Robert J. Walker, John W. Houston, John B. Franklin, Francis Mallory.

The business proceedings of the meeting were followed by a dinner, at which the success of the enterprise was celebrated in sentiments and speeches. The cost of the road is estimated at $4,000,000; its receipts at $4,000 per day.—*Balt. Amer.*

Clinton Line Railroad.—We regret to notice, that one of the contractors upon this important line, has paid off his hands, and suspended operations for the want of funds on the part of the Company.

We had understood, that the means had already been provided for the construction of this line, and can not now but believe that the suspension will be but temporary.

Belleville and Murphysboro' Railroad and Alton Extension.—Some fears have been entertained that the progress of this road would be retarded by the recent difficulty with Messrs. Page & Bacon, of St. Louis; from the Alton Telegraph, we learn that no interruption of the work will ensue further than a change in the contractors. The work will be continued and urged to early completion.

CINCINNATI STOCK SALES.

AT THE STOCK BOARD,

MERCHANTS' EXCHANGE

And at Private Sale.

BY HEWSON & HOLMES,

For the week ending Wednesday, June 7, 1854.

THE SALES WERE AS FOLLOWS:

For want of report we are compelled to omit the table of Stock Sales.

MONETARY.

At the East the Money Market continues to afford a fair amount of facilities for borrowers, on call loans at 7 per cent; short No. 1 paper, at 8@9 per cent.: less known paper at 7@10 per cent.; railroad securities, 12 per cent.

The amount of specie in the New York Sub-Treasury at the close of May, was $9,406,867. The shipment of specie has not been heavy.

Foreign Exchange is firm at 109½@109¾.

The Stock Market has been unsteady, though the fluctuations were unimportant. The sales during the past week have been heavy, though the prices at the close did not present any noticeable advance.

We quote sales as follows:

By A. H. Nicolay, May 29th—

At the West, Money has been in more active demand; the general indications being less favorable out of doors than during last week. Number one paper rates at 1 per cent. per month. Business generally is extremely dull. Eastern Exchange remains at ½@¾ premium.

Our Stock Sales are inactive, but little opportunity for selling.

The following notice, extending the proposition for the redemption of the public debt to 1st of July, has been issued by the Secretary of the Treasury:

TREASURY DEPARTMENT, May 20th, 1854.

The time limited by the notice of this department of the 1st of January last for the purchase of stocks of the United States, is hereby extended to the 1st of July next. But it is to be observed in regard to certificates which may be received at it after the 1st of June, that in addition to the usual assignment, the holder must distinctly assign the interest on the same which will then have been made up at the treasury, or transmit the coupons, as the case may be. In default of this latter assignment or transmission, the premium and one day's interest, (less interest from the time of redemption to the 1st of July,) only will be paid.

To afford an opportunity to distant holders to avail themselves of this notice, the department will consider stock mailed prior to the first of July as entitled to its benefit, upon the usual evidence of being so mailed.

JAMES GUTHRIE,
Secretary of the Treasury.

KENTUCKY LOCOMOTIVE WORKS.

CORNER OF KENTUCKY AND TENTH STS.

LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of Stock and Machinery required for railroads.

Particular attention will be paid to repairing, for which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Splining, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

☞ Communications or orders must be addressed to

OLMSTED, TENNYS & PECK,

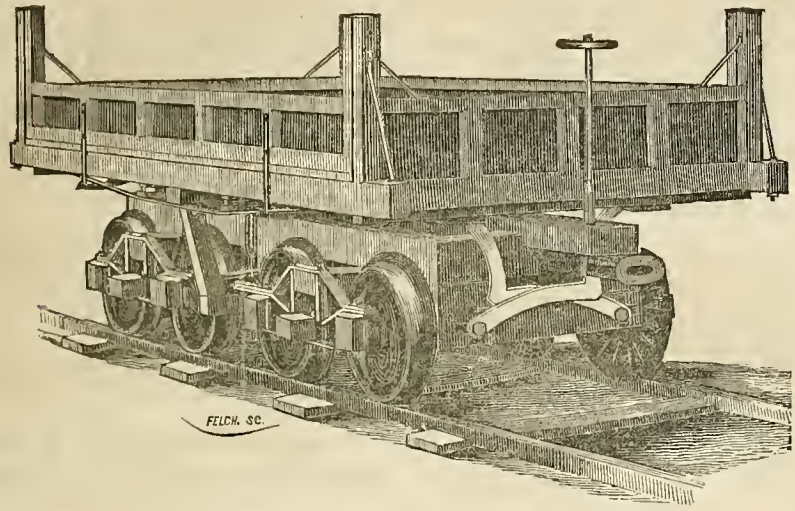
BAILEY'S PATENT DUMPING CAR.

Fig. 1.



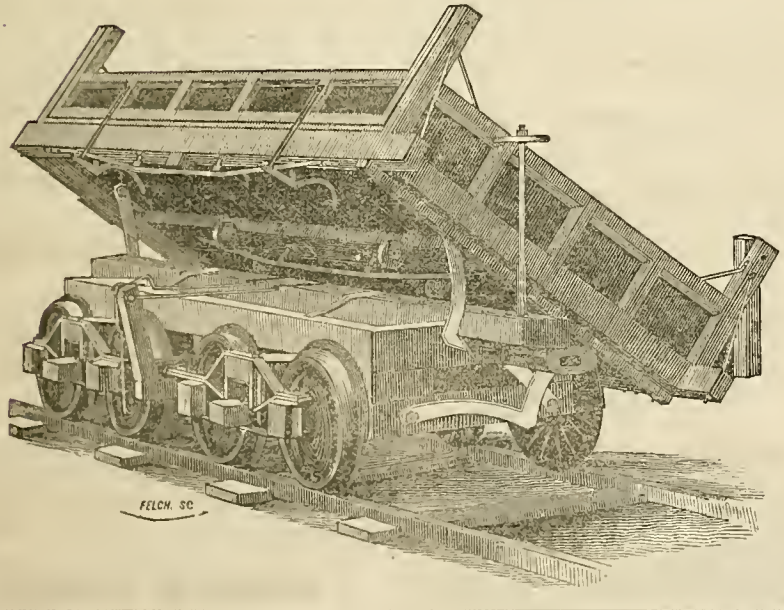


Fig 2.

The above engravings are views of a most important improvement in Railroad Dumping Cars. A patent was granted to C. P. Bailey for the improvement, January 24th, 1854.

Fig. 1 is a view of the car ready to receive the load.

Fig. 2 when dumped, or the load discharged.

This Improvement has been in use on the Central Ohio Railroad for several months; also, on the Cincinnati, Hamilton & Dayton; Cleveland, Zanesville & Cincinnati; Cleveland & Columbus; and other Railroads in this state. Also upon the Illinois Central, in Illinois.

The improvement consists mainly, in the adoption of the Wrought Iron Transverse Bars, instead of the Cast Iron Rockers, generally in use. There are, however, other details of importance.

The box or body of the car rests on the ends of the Transverse Bars, whose other and lower ends are attached to the frame of the truck; two of the (wrought iron) bars are used at each end of the cars, to support and operate as guides in dumping the car. This improvement can be applied equally as well to the four-wheeled as to the eight-wheeled car.

One man will dump this car with ease when loaded, in less time than ten men can dump the rocker car, (the long or eight wheeled car is alluded to.) Contractors who have been using it, state that in graveling roads, **it is a saving of two cents per yard,** over the rocker car—that it is a much safer and easier car to manage, preferring it to any other car now in use for similar purposes.

Its liability to get out of repair is not one-tenth that of the Rocker Car. It is also well calculated for carrying and unloading Coal, Lime, Plaster, and all such materials as are carried in Dumping Cars—giving greater inclination in dumping, and discharging the load with greater facility than any other car.

The attention of Railroad Companies wanting Gravel Cars, as well as Coal Cars, is respectfully solicited to this improvement. The cost of this car does not exceed that of the Rocker Car,

To Railroad Companies and Car Builders who wish to purchase Rights, or wish information on the subject, letters addressed to me at Columbus, Ohio, will receive immediate attention.

GEO. L. CHASE.

Columbus, Ohio, June, 1854. Sole Agent for the United States.

TESTIMONIALS.

Engineer's Office, C.O. R. R.
Zanesville, Ohio, Nov. 21st, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—At your request, some two months since, I caused to be placed on this road two of your newly invented Gravel or Dumping Cars. From what I have seen of their work I am clearly of the opinion that they will soon supercede all others of the kind now in use.

We have had the long car filled to its utmost capacity with the various kinds of excavation, and placed it in every position, and one man would dump it with ease in ten seconds, whereas, with the ordinary Rocker Car, it takes ten men one minute to perform the same labor.

The Car is simple in construction—not liable to get out of repair, as there is but little cast-iron about it. It tips to a greater angle than the ordinary car, therefore leaving its load in a better shape. I have no hesitation in saying that when more cars of the kind are wanted on this road they will be built after your model.

Wishing you every success in your undertaking, I remain, with great respect,

Yours, &c.,
GEO. T. CLARKE,
Chief Engineer.

I have purchased for the use of this company, two Gravel Cars, built after the plan of Mr. Bailey, and fully agree in the opinion above expressed.

HENRY O. AMES,
Sup't Cin., Ham. & Dayton Railroad.

I fully agree in the statement made by the gentlemen in this letter, and may also state that they are the best Gravel Cars ever built, in my opinion.

DANIEL McLAREN.
Mast. Machinist Cin., Ham. & Dayton Railroad.

Zanesville, Dec. 21, 1853.

Charles P. Bailey, Esq.,

Dear Sir:—From an experience in using your Improved Dumping Car, we have no hesitation in saying that two cents per yard is saved, (in labor and time) by using your car instead of the present Rocker Car.

That the repairs incidental to your car are not one-tenth of what they are on the Rocker Car.

That it is much the most profitable car for contractors as well as the safest one for laborers to use, being easier to handle.

We consider it superior, in every respect, to all other cars of the kind now in use.

Yours, truly,
E. NEWCOMB,
C. BARRET.
Cont'rs for grav. East. Div. C. O. Railroad.

I have seen the car above referred to at work upon the Eastern Division Central Ohio Railroad, and fully concur with the opinion of Messrs. Newcomb & Barret

E. B. DUVAL,
Mast. Machinist, Central Ohio Railroad.
Zanesville, December 21, 1853.

Zanesville, Dec. 22, 1853.

Mr. C. P. Bailey,

Dear Sir:—As you desire my opinion of your Improved Dump or Gravel Car, that has been in use for the last three months on the Central Ohio Railroad, I do not hesitate to recommend it as being the best plan for a Gravel or Dump Car I have ever seen. The bills for repairing Dump Cars, such as are now in general use, it is well known, constitute a serious item of expense. On this account alone, your plan deserves a preference over all others, as there is but little liability about your car to any such accidents as are constantly occurring to the others. It dumps to a greater angle, and one or two men can dump it in less time, and with greater ease than the ordinary Rocker is dumped by ten or twelve men.

It will give me pleasure to recommend it as superior to any improvement of the kind in use.

ROBERT MACLEOD.
Chief Engineer, P. M. & C. R. R.

At a meeting of the Ohio Associatinn of Railroad Superintendents, held at Cincinnati, March 8, 1854, the Committee appointed to examine Bailey's Patent Dumping Car,

REPORT,

That they have examined the Car, and consider the improvement a valuable one; and would recommend to any members of the Association who may need Gravel Cars, to examine and test this Car, before purchasing elsewhere.

W. H. CLEMENT,
For the Committee.

Clev. Col. & Cin. and Clev. & Erie R. R.
Supt.'s Office, Cleveland, O., Apr. 24, 1854.

Mr. Charles P. Bailey,

Dear Sir:—Two of your Patent Dumping Gravel Cars have been used on the Cleveland, Columbus & Cincinnati Railroad for several weeks, and I am so well satisfied that they are better than any others, that I have just ordered thirty more of the same sort,

Respectfully,
L. TILTON,
Sup't.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was openod to tho Ohio River in the spring of 1853, and has already established a high character with the business community of tho Wost. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of tho country through which it runs, and its many admirablo provisions for the expedition, comfort and safety of travelors, it has roceived such favor as a passonger road, (with its present connections,) as to show that it will become tho preferred routo for all portions of the West and South-West as soon as its furtber connections are formed by tbe completion of tho Central Ohio, Nortb-Western Virginia and other Railroads now rapidly finisbing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Cbicago, Toledo, Detroit, Cleveland, Columbus, Zanosvillo and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, tho company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road cballengos a comparison with its rivals. At Baltimore, the road conuects directly in the streets and at tho wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of tho Parker Vein Line to New York and Bostou, the Ericsson Steamors by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc. Attention is called to tbe following

Through Freight Tariff,

Adopted by its summer rates, April 1st, 1854. (Notice will bo given in the principal uewspapers of the West, of the time of change from summer to winter rates.) The leading articles are rated as follows:

mr3

To Railroad Contractors, Quarry Men, &c.

THE attention of those interested is called to ASH'S IMPROVED HORSE POWER ROCK DRILL, for Railroad Excavation, Stone Quarrying, Well Boring &c.

This Drill is worked by HORSE POWER, requiring but one horso and one man, to keep it constantly at work, with great easo and velocity, performing 60 strokes per minute. It is cheap of construction and repair. The AUGER weights from 300 to 500 pounds, will drill a perpendicular or inclined hole FOUR INCHES IN DIAMETER, at the rate of from 8 to 16 feet per day in ordinary limo stone. It has drilled 2 feet in one hour.

For rights to use for Counties or States, apply to the Patentee. WILLIAM F. ASH,
May 20, 3* Springfield, Ohio.

NOTICE.—The Subscriber having become proprietor of MYERS' PATENT CYLINDER CAR, for a considerable portion of Western territory, including the State of Ohio, offers the same to Rail Road Companies on favorable terms. The public will be furnished within a short time with complete explanations of its operation, together with the results of actual experiments testing its applicability to all the uses for which it is recommended. W. CLOUGH,
South-western Car Works.
Madison, Indiana. May 11.

NOTICE TO CONTRACTORS.

SEALED Proposals will be received at the office of the undersigned in Indianapolis until the 10th of June next, for the Grading, Masonry and Bridging of that portion of the Indiana and Illinois Central Railway extending from Indianapolis to Bainbridge, in Putnam county, being a distance of about 35 miles, of heavy work. The map and profile, together with the plans and specifications will be ready for inspection on and after the 1st of June at the office of the undersigned at Indianapolis. The undersigned reserve to themselves the right to reject all proposals that are not satisfactory.

M. C. STORY & CO.
Indianapolis, May 15, 1854. my. 18-tt.

NOTICE TO CONTRACTORS.

PROPOSALS for the entire Construction and Equipment, or the graduation, bridging and masonry separately, either in whole or in part, of the Mississippi and Tennessee Railroad, (extending from Memphis to Grenada Mississippi, about 97 miles,) will be received at the office of the company in Memphis, till the 20th of July next. Proposals for the entire construction and equipment, and otherwise as favorable, will have preference. Profiles and estimates of the first 60 miles may be seen on application at the Engineer's office in Memphis. Bidders must furnish satisfactry evidence of their ability to complete the work.

MINOR MERIWETHER,
